Abstract

In the heart of Sri Lanka, a silent crisis unfolds as children grapple with the harsh realities of socio-economic challenges. The 'Hope for Tomorrow' multimedia campaign emerges as a beacon of light, addressing the urgent issues threatening the well-being of the nation's most vulnerable demographic.

More than statistics, it's a call to action over 25% of Sri Lanka's children face malnutrition, 20% lack essential healthcare, and 15% are unable to attend school regularly due to financial constraints. The 'Hope for Tomorrow' initiative stands as a crucial intervention, recognizing the pressing need for collective support.

Our comprehensive multimedia solution revolves around the Little Bud Foundation—a catalyst for change. A dynamic website becomes the center, inviting people from all walks of life to unite in support. It's not just a platform; it's an invitation to make a tangible difference. Through a strategic social media campaign, impactful videos, animations, and compelling audio commercials, we aim to raise awareness, mobilize support, and generate resources for the vulnerable children in Sri Lanka.

This call extends universally to the general public, local and international NGOs, government agencies, and potential investors. It's an invitation for humanity to contribute in any way possible.

Key points are carefully addressed, from revealing the pervasive issue with compelling statistics and multifaceted challenges faced by Sri Lanka's children to illuminating the immediate and long-term consequences on a child's health, education, and overall well-being. The campaign delves into the economic instability, lack of education, healthcare, nutrition, and shelter that underlie child deprivation. Importantly, it showcases successful grassroots efforts of the Little Bud Foundation, emphasizing positive impacts and lessons learned. The call to action is clear proposing actionable steps and opportunities for individuals, organizations, and policymakers to actively participate and support initiatives improving the lives of deprived children.

Join us on this transformative journey. 'Hope for Tomorrow' is an open invitation to be the change Sri Lanka's children need. Visit the Little Bud Foundation website, share our message, and contribute to making a meaningful difference. Together, let's turn hope into reality, one donation at a time. "Hope for Tomorrow" starts with each one of us.

Glossary of Terms

Term	Interpretation
CPU – Central Processing Unit	The part of a computer that obtains and executes instructions is called the central processing unit (CPU).
RAM - Random Access Memory	A RAM card is a real memory module that is attached to the motherboard of a computer. (Anon, 2015)
OS – Operating System	A boot program loads an operating system (OS) onto the computer, which controls all other software and apps. (Team, 2021)
VGA- Video Graphics Array	Uses a device called as a graphics adapter, commonly referred to as a video/display card, (Anon., 2016)
GB	Giga Bytes One gigabyte is equal to 1,024 megabytes (MB) in a computer operating system.
PM	Project Manager

1.Introduction and Background

1.1. Introduction

Amid the social economic challenges facing Sri Lanka, the “Hope for Tomorrow” campaign is seen as a beacon of change, with a focus on the vulnerable demographic of children facing the brunt of deprivation. Families' struggle to meet basic needs such as nutrition, education, healthcare and housing has been intensified by the economic downturn, posing a serious threat to the well-being of children.
Supported by striking statistics from renowned organizations like UNICEF, the “Hope for Tomorrow” multimedia campaign is a concerted effort to alleviate the challenges these children face. Utilizing various multimedia platforms, the campaign aims to raise awareness, mobilize support and generate resources for vulnerable children, with a transformative vision to empower communities and address the urgent needs of Sri Lanka's children.
The target audience for this campaign includes the general public, local and international NGOs, government agencies and potential investors. To lead this initiative, as a solution by research found the Little Bud Foundation, dedicated to raising donations for the essential needs of children in Sri Lanka. This is a good and best solutions to help to the for the basic essential needs of children in Sri Lanka.by Ideahub solutions company create multimedia solutions for this little bud foundation and going promote by promotion campaign.

A comprehensive strategy involves creating a dynamic website, serving as a central hub for information, interaction and donations. This platform aims to bring people from all walks of life together, providing clear steps for involvement, donation options and volunteer opportunities. The cause will be amplified through a strategic social media campaign, encouraging widespread participation and sharing.
Additionally, the Little Bud Foundation will be promoted through engaging video and animation content, inspiring individuals to contribute and make a meaningful impact. To further expand the campaign's reach, strategic audio advertisements will be broadcast on reputable radio channels.
This multimedia effort is an open invitation to collective action, urging individuals and organizations to support initiatives that improve the lives of Sri Lanka's disadvantaged children. Together, we are on a journey to turn hope into reality, one donation at a time, and create a better future for these children in need.

1.2 Background and Motivation

The “Hope for Tomorrow” multimedia campaign is driven by a deep understanding of the pressing socio-economic challenges facing children in Sri Lanka. As a result of the economic downturn, the vulnerability of children has increased, and a large proportion of them face malnutrition, limited access

to health care and barriers to education. Statistics provided by reputable organizations such as UNICEF paint a disconcerting picture, revealing the harsh reality that more than 25% of children in Sri Lanka struggle with malnutrition, hampering both their physical and cognitive growth . These challenges are exacerbated by a noticeable increase in unemployment rates, which causes financial hardship for families and prevents around 15% of children from regularly attending school.

Motivated by the urgency of these circumstances, the “Hope for Tomorrow” campaign aims to be a beacon of support for these vulnerable children. The multifaceted approach leverages various media platforms, including a website, social media campaigns, videos, animations and audio ads, to effectively convey the message and inspire action.

The solution involves a connect with the Little Bud Foundation, a worthy organization dedicated to raising donations and combating the lack of basic needs among Sri Lanka's children. Through a comprehensive website, the campaign will serve as an information hub, promoting community engagement and encouraging donations. Social media campaigns will amplify the message, inspiring individuals to share their commitment to the cause, while video and animation content will emotionally resonate with audiences, showcasing the impact of child deprivation and the power transformer of support.

The campaign aims to leverage the power of the brand's promotional products, sold on the website, to generate additional funds for the Little Bud Foundation. This innovative approach not only raises awareness, but also offers individuals a concrete way to contribute. Audio advertisements on reputable radio channels will further extend the reach of the campaign, inspiring people to donate and make a meaningful difference in the lives of underprivileged children in Sri Lanka.

In essence, the “Hope for Tomorrow” campaign is not just a multimedia initiative; it is a call to action, a rallying cry for collective responsibility to uplift the most vulnerable members of Sri Lanka's communities. By partnering with the Little Bud Foundation, this campaign aspires to be a catalyst for positive change, providing hope and tangible solutions for a better future for these children.

1.3.Problem in brief

In Sri Lanka, socio-economic challenges have had serious consequences on the most vulnerable population: children. Economic downturns have given rise to a pressing concern: the deprivation of these young people's basic needs. Families are struggling with financial instability, making it increasingly difficult to provide their children with the basic necessities of adequate food, education, health care and housing. The repercussions are serious and pose a significant threat to the well-being and future prospects of these children.

Reliable statistics from reputable organizations such as the United Nations Children's Fund (UNICEF) and government agencies in Sri Lanka paint a worrying picture. Child poverty rates have increased significantly, with over 25% of children in Sri Lanka facing malnutrition due to insufficient access to adequate nutrition, impacting their physical and cognitive growth. Additionally, approximately 20% of children do not have access to essential health services, hindering their ability to receive necessary medical care and treatment. The economic downturn has led to a noticeable increase in unemployment rates, imposing financial hardship on families and as a result, around 15% of children are unable to attend school regularly due to financial constraints.

These statistics highlight the growing challenges faced by children in Sri Lanka, where economic hardship has significantly hampered their access to basic needs and essential services essential to their overall well-being. Families, struggling with reduced incomes, inflation and limited access to resources, are finding it increasingly difficult to ensure the overall development of their children. The economic crisis has further exacerbated socio-economic disparities, disproportionately affecting vulnerable children and hindering their access to quality education, health facilities, adequate nutrition and safe living conditions.

This urgent situation calls for immediate collective action and support from individuals, organizations and philanthropic entities. It is imperative to support these children, providing them with the resources and opportunities to meet their basic needs and pave the way to a better, more secure future. The “Hope for Tomorrow” multimedia campaign emerges as a response to this critical need, aiming to raise awareness, mobilize support and generate resources to meet the urgent needs of Sri Lanka’s children facing unprecedented challenges.

2. Proposed solutions

The multimedia solution crafted for the 'Hope for Tomorrow' campaign is designed to address the critical issue of child deprivation in Sri Lanka, leveraging various platforms to inspire collective action and support for vulnerable children. The comprehensive strategy revolves around promoting the Little Bud Foundation, a dedicated organization working towards alleviating the essential needs deprivation among children in Sri Lanka.

The first and primary solution for engagement is the creation of a dynamic website for promote Little bud foundation and inspiring people to donate. This website serves as the central hub for information

and interaction, providing a clear and compelling narrative about the challenges faced by Sri Lankan children. It introduces the Little Bud Foundation, offering visitors a transparent view of their mission and impact. The website showcase issues and problems what children faced. The website incorporates a user-friendly donation portal, allowing individuals from diverse backgrounds to contribute and make a difference. Additionally, it showcases opportunities for volunteering and involvement in the cause.
Complementing the website is a robust social media campaign. Through platforms like Facebook, Instagram, and you tube, the 'Hope for Tomorrow' campaign aims to raise awareness, share impactful stories, and encourage individuals to engage with and share the cause. The campaign's message will be amplified through visually compelling content, highlighting the urgency of addressing child deprivation and motivating a wider audience to contribute.

To improve engagement and awareness, the media solution includes video and animation content creation. These visuals will tell poignant stories, highlighting the immediate and long-term effects of child deprivation. Through emotionally resonant stories, the videos aim to arouse empathy and inspire action. These media assets will be shared strategically across various digital platforms to maximize their reach.
Additionally, a unique element of the solution involves the creation of branded promotional products under the Little Bud Foundation. These products will not only serve as tangible symbols of support but also as a means to generate additional funds. The website will facilitate the online sale of these products, with profits contributing directly to the foundation's initiatives.

Finally, the solution integrates audio advertisements on renowned radio channels. These advertisements will be an additional way to reach a diverse audience, encouraging them to contribute to the cause and make a positive impact on the lives of underprivileged children in Sri Lanka.
Ideahub solution multimedia company supported by the Little Bud Foundation, is a multifaceted approach to leveraging technology and media to inspire collective action, raise awareness and generate resources for vulnerable children in Sri Lanka. Lanka. Through the strategic integration of various platforms, the campaign seeks to transform lives and empower communities to meet the urgent needs of these children in the face of economic hardship.

2.1 Suggested starting point

Starting a project like this involves careful planning and step-by-step implementation. The first step is to begin the Conduct In-depth research and need identify current situation of the country and because of that what are the problem faced children in Sri Lanka. Because financial instability has heightened

the struggles for many families in providing adequate nutrition, education, healthcare, and shelter for their children, posing a significant threat to their well-being and prospects.
Understand the problems, solutions, scope, preferences, challenges, and expectations of target audience. Analyze market, existing sustainable aquicultural solutions, systems, and continue with the remaining tasks under project plan, which are requirement gathering, selecting themes and design elements and components, allocating resources, creating concept artwork, building brand risk analysis, consider marketing strategies and create website and build marketing campaign.

3. Aim and Objectives

3.1 Aim

Aim of this project is fundraising through the multimedia campaign for the support to the urgent needs of Sri Lanka's children who deprivation of essential needs among children.

3.2 Objectives

- To create a dynamic website for promote inspiring people to donate.
- To Create and optimize a user-friendly online platform for accepting donations.
- To launch social media campaign
- To Create emotionally compelling multimedia content, including videos, animations, audio commercials effectively communicate the urgency of supporting Sri Lanka's children.
- To sell brand products through online platforms and collect funds.

4. Technologies & Resources

4.1 Technologies

4.1.1 Adobe photoshop 2024

Adobe developed Photoshop, a program for modifying photos and creating graphics. The software offers numerous pixel-based image editing features for raster graphics and vector graphics (Adobe.com, 2022)

4.1.2. Adobe Illustrator 2024

A Windows or Mac OS computer can be used to create artwork using the software program Adobe Illustrator. Illustrator was first made available in 1987; it is still regularly updated, and it is currently a component of the Adobe Creative Cloud. Visual artists, professional illustrators, web designers, and graphic designers all over the world utilize Illustrator to produce high-caliber artwork. There are

numerous intricate drawing tools in Illustrator that help speed up the graphic creation process. (Adobe.com, 2022)

4.1.3. Adobe After Effects 2024

After Effects is a motion graphics and visual effects software used for video editing, compositing, and creating animations. It is commonly used for producing motion graphics and adding special effects to videos. After Effects offers a range of tools for creating animations, visual effects, and dynamic motion graphics. It supports keyframing, layering, and various effects and plugins, making it a go-to software for video post-production and animation. (Adobe.com, 2022)

4.1.4. Figma 107.0. 0. 2021

Figma is a cloud-based design tool used for user interface (UI) design, user experience (UX) design, and collaboration on design projects. It's especially popular for creating interactive prototypes. Figma allows multiple users to collaborate in real-time on the same design file. It includes features for designing interfaces, creating and testing prototypes, and gathering feedback from team members or clients. Its versatility makes it a valuable tool for designers working on web and mobile projects. (Adobe.com, 2022)

4.1.5. Adobe premiere Pro 2024

Adobe Premiere Pro is primarily used for video editing. It allows users to edit and manipulate video footage, arrange and cut clips, add audio, apply effects, and create a seamless final video product. Premiere Pro supports collaboration features that enable multiple editors to work on the same project simultaneously. Project files can be stored in the Adobe Creative Cloud, facilitating collaborative work on shared projects. (Adobe.com, 2022)

4.1.6 Adobe Media Encoder 2024

Adobe Media Encoder is an encoding engine for Adobe Premiere Pro, Adobe After Effects, (Adobe.com, 2022)Adobe Audition, and Adobe Character Animator.

Using Adobe Media Encoder, people can export videos to video-sharing websites like You Tube and Vimeo, devices ranging from professional tape decks to DVD players, mobile phones, and high-definition TV sets. (Adobe.com, 2022)

4.1.7 Adobe InDesign 2024

InDesign is Adobe's and page design software for print and digital media, such as flyers, posters, stationary, slideshows, and more. BU educators and students can supplement pages of text with shapes and images to add professionalism and personality to documents.

4.1.8 BandLab 10.61.2.

BandLab is a social music platform that enables creators to make music and share their creative process with musicians and fans. With a global community of creators and fans, BandLab combines music making and collaboration tools like the world's first cross-platform DAW, with social features like video sharing, messaging and discovery. BandLab's mission is to break down the technical, geographic and creative barriers between creators, collaborators and community by providing an empowering service for all. (Anon., 2022)

4.1.9 Adobe After Effects 2024

Adobe After Effects is a digital visual effects, motion graphics, and compositing application developed by Adobe Inc.; it is used in the post-production process of film making, video games and television production. Among other things, After Effects can be used for keying, tracking, compositing, and animation. (Adobe.com, 2022)

4.1.10 Miro 0.8.26.0

Miro is an online workspace for innovation that is visually reminiscent to whiteboards we have in meeting rooms. All the tools are located on the left side of the screen. And it allows project manager to add various content from texts to images, create maps and diagrams, and work with visual templates together with a team.

With Miro,can take advantage of a full set of collaboration capabilities, make cross-functional teamwork effortless, and organize meetings and workshops: use video chat, presentation, sharing, and many other features. (Anon., 2022)

4.1.11 Bootstrap v5.3

Bootstrap is a free, open source front-end development framework for the creation of websites and web apps. Designed to enable responsive development of mobile-first websites, Bootstrap provides a collection of syntax for template designs.

As a framework, Bootstrap includes the basics for responsive web development, so developers only need to insert the code into a pre-defined grid system. The Bootstrap framework is built on Hypertext Markup Language (HTML), cascading style sheets (CSS) and JavaScript. Web developers using Bootstrap can build websites much faster without spending time worrying about basic commands and functions.

4.1.12 Java Script

JavaScript is a scripting or programming language that allows you to implement complex features on web pages — every time a web page does more than just sit there and display static information for you to look at — displaying timely content updates, interactive maps, animated 2D/3D graphics, scrolling video jukeboxes, etc. — you can bet that JavaScript is probably involved. It is the third layer of the layer cake of standard web technologies, two of which (HTML and CSS) we have covered in much more detail in other parts of the Learning Area.

4.1.13 HTML 5

The HyperText Markup Language or HTML is the standard markup language for documents designed to be displayed in a web browser. It defines the content and structure of web content. It is often assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript.

Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages. HTML describes the structure of a web page semantically and originally included cues for its appearance.

HTML elements are the building blocks of HTML pages. With HTML constructs, images and other objects such as interactive forms may be embedded into the rendered page. HTML provides a means to create structured documents by denoting structural semantics for text such as headings, paragraphs, lists, links, quotes, and other items. HTML elements are delineated by tags, written using angle brackets. Tags such as <img> and <input> directly introduce content into the page. Other tags such as and surround and provide information about document text and may include sub-element tags. Browsers do not display the HTML tags but use them to interpret the content of the page.

4.1.14 CSS 2.1

Cascading Style Sheets (CSS) is a style sheet language used for specifying the presentation and styling of a document written in a markup language such as HTML or XML (including XML dialects such as SVG, MathML or XHTML).[1] CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript.

CSS is designed to enable the separation of content and presentation, including laproject managert, colors, and fonts.[3] This separation can improve content accessibility; provide more flexibility and control in the specification of presentation characteristics; enable multiple web pages to share formatting by specifying the relevant CSS in a separate .css file, which reduces complexity and repetition in the structural content; and enable the .css file to be cached to improve the page load speed between the pages that share the file and its formatting.

Separation of formatting and content also makes it feasible to present the same markup page in different styles for different rendering methods, such as on-screen, in print, by voice (via speech-based browser or screen reader), and on Braille-based tactile devices. CSS also has rules for alternate formatting if the content is accessed on a mobile device.

The name cascading comes from the specified priority scheme to determine which style rule applies if more than one rule matches a particular element. This cascading priority scheme is predictable.

4.1.15 Procreate 2011

Procreate is a raster graphics editor app for digital painting developed and published by the Australian company Savage Interactive for iOS and iPadOS.

Loved by creative professionals, Procreate has everything designers need to create expressive sketches, rich paintings, gorgeous illustrations and beautiful animations. Procreate is the complete art studio you can take anywhere, packed with unique features and intuitive creative tools.

4.1.16 Corel draw 2023

CorelDRAW is a vector graphics editor developed and marketed by Alludo. It is also the name of the Corel graphics suite, which includes the bitmap-image editor Corel Photo-Paint as well as other graphics-related programs.

Some of the common uses of CorelDraw are: Magazine Designing, News Paper Designing, Books Designing, Illustration Making, Logo Making etc. Export files, print multiple documents, or copy & paste large objects without delay. Instantly extract images from a client's web site by using the new Corel CONNECT search toolbar.

4.1.17 visual studio code 2023

Visual Studio Code, also commonly referred to as VS Code, is a source-code editor developed by Microsoft for Windows, Linux and macOS. Features include support for debugging, syntax highlighting, intelligent code completion, snippets, code refactoring, and embedded Git

- Programming languages: JavaScript, C, C#, CSS, TypeScript

- Developer: Microsoft Corporation
- Initial release date: April 29, 2015
- Available in: 15 languages
- Operating system: Windows 10 or later, OS X 10.11 or later, Linux
- Platform: x86-64, ARMhf, ARM64

4.2 Resources

4.2.1 Hardware requirement

A computer with following minimum requirement to design

- Windows® 10 (64-bit) or higher.
- Multicore Intel processor with 64-bit support or AMD Athlon 64® processor that. supports SSE 4.2 or later.
- 8 GB of RAM or more.
- 15 GB free hard drive space or more.
- GPU with DirectX 12 support and supports OpenGL version 4.0 or greater.
- Internet connection access.

I phone 11 Mobile phone

6.1-inch (15 cm) IPS LCD with a resolution is 1792 × 828 pixels (1.4 megapixels) at a pixel density of 326 PPI with a maximum brightness of 625 nits and a 1400:1 contrast ratio and it is equivalent to the iPhone XR. It supports Dolby Vision, HDR10, True-Tone, and a wide color gamut

Go pro camera

- Camera Type. HERO (Single-Lens) ...
- Video Stabilization. HyperSmooth 6.0. ...
- Horizon Lock. 360° Rotation, up to 5.3K30, 4K60, and 2.7K120. ...
- Horizon Leveling. Up to 27°, 5.3K60, 4K120, 2.7K240 and 1080/240. ...
- Top Video Modes. 5.3K: 8:7 (5312x4648) ...
- Video Res/FPS Summary. 5.3K (8:7) @30/25/24 fps. ...
- Star Trails. ...
- Light Painting.

Intel® Core™ i7 Laptop

Intel Core i7 is a line of processors from Intel, ranging from 2 to 16 cores and offering up to 25MB Intel Smart Cache. Many of them also feature integrated graphics, such as Intel UHD Graphics and Intel Iris® Xe Graphics. These high-performing processors are ideal for any type of PC, but especially laptops.

Macbook Pro M2 Pro

Processor/GPU : Apple Silicon M2 Pro

RAM : 16GB

- Apple M1 Max 10-Core Chip
- 64GB Unified RAM | 2TB SSD
- 14.2" 3024x1964 Liquid Retina XDR Screen
- 32-Core GPU | 16-Core Neural Engine
- Wi-Fi 6 (802.11ax) | Bluetooth 5.0
- Thunderbolt 4 | HDMI | MagSafe 3
- SDXC Slot | FaceTime HD 1080p Camera
- Backlit Magic Keyboard
- Force Touch Trackpad | Touch ID Sensor
- macOS

iPad Air 5

Display Support

- Supports full native resolution on the built-in display at millions of colors
  - Supports one external display with up to 6K resolution at 60Hz
- Digital video output
  - Native DisplayPort output over USB-C
  - VGA, HDMI, and DVI output supported using adapters (sold separately)
- Video mirroring
  - Up to 4K AirPlay for mirroring, photos, and video out to Apple TV (2nd generation or later) or AirPlay-enabled smart TV
  - Video mirroring and video out support through USB-C Digital AV Multiport Adapter and USB-C VGA Multiport Adapter (adapters sold separately)
- Liquid Retina display
- 10.9-inch (diagonal) LED-backlit Multi-Touch display with IPS technology

- 2360-by-1640-pixel resolution at 264 pixels per inch (ppi)
- Wide color display (P3)
- True Tone display
- Fingerprint-resistant oleophobic coating
- Fully laminated display
- Antireflective coating
- 1.8% reflectivity
- 500 nits brightness
- **S**upports Apple Pencil (2nd generation)
- 4K video recording at 24 fps, 25 fps, 30 fps, or 60 fps
- 1080p HD video recording at 25 fps, 30 fps, or 60 fps
- 720p HD video recording at 30 fps
- Slo-mo video support for 1080p at 120 fps or 240 fps
- Time-lapse video with stabilizatio

5. Literature Review

In addition to analysing the methods currently used for community-based graphic design and designing for social change, the design process began with a survey of the literature on social responsibility and social design. The author developed their own social design strategy by starting with these strategies.
Conversely, the objective of the design project is to study and research existing community-based graphic design methodologies and, if practicable, implement these methodologies in an advertising campaign that tackles a relevant social issue. The next step is to evaluate the techniques' possible efficacy and any advantages they could have given the designer.
Furthermore, through target group interviews, the objective is to ascertain how the interpretation of a design solution of this kind might vary based on the sender's identity and visibility.

5.1. Design Process

The goal of the design project is to review and study current community graphic design approaches and, if possible, apply these approaches in an advertising campaign that addresses a relevant social issue. The objective is then to evaluate the potential effectiveness of the strategies and the benefits they may have brought to the designer. Furthermore, the aim is to learn, through interviews with a target group, that the interpretation of a design solution of this type can vary depending on the identity and visibility of the sender. The design process began with a review of the literature on social responsibility and social

design, as well as an analysis of approaches already in place for community-based visual design and design for social change.

The Design Process, if attempted to be understood, might be perceived as mysterious or complex, but it should be neither.

5.1.1.What is design process?

Describing the Design Process as a problem-solving approach contributes to its perceived complexity. When presented with a sequence of steps for the design process, the initial step is commonly stated as "define the problem."

However, for many designers, having a problem to solve may not be applicable, rendering the first step seemingly unhelpful.

Not all designs exclusively revolve around problem-solving. Instead of having problems to address, designers often have a goal to achieve, such as selling a product, or are tasked with producing a specific deliverable, like a logo or web design. (Proxi ityschool.com, 2022)

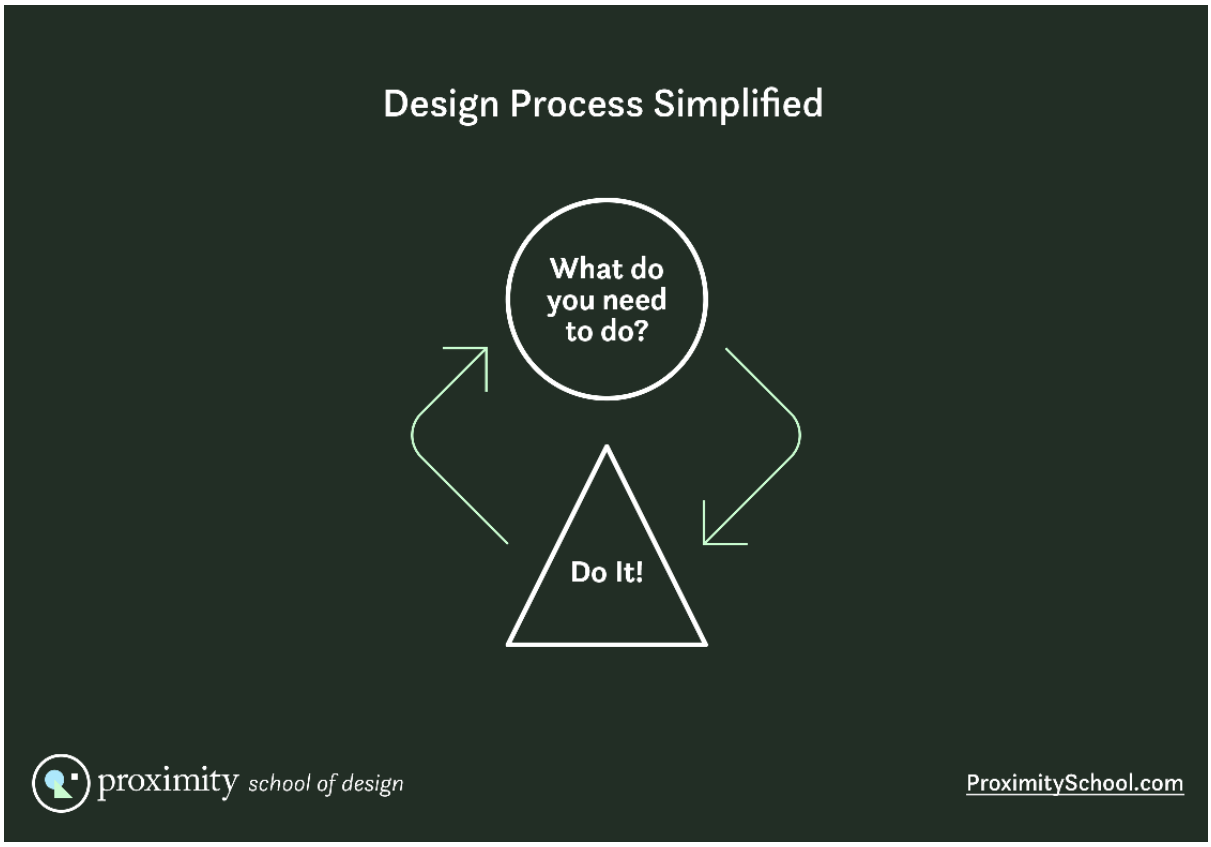

Figure 1-Design process – Source- proximityschool.com

The design process is a manner of determining what needs to be done and subsequently executing it.

Throughout this journey, one may address one or more problems, strive to attain a goal, and/or craft something specific.

The initial crucial realization about the design process is that it is not about adhering to the "right way" or "wrong way." Instead, it is a method employed to enhance creativity, productivity, and accuracy. The process should be adapted to by the user, as opposed to the user conforming to it. It is not a rigid sequence of steps to be followed but rather a tool utilized to produce superior work.

The objective of this guide is to instruct you on how to employ the design process in approaching real-world scenarios. (Proxi ityschool.com, 2022)

Why design process is important.

Relying on inspiration and elusive creativity to discover the best ideas is attempted by some creative professionals. The consequence is that on certain days, when inspiration is lacking, productivity is compromised.

However, even when inspiration is present, creativity can sometimes guide individuals in the wrong direction, resulting in the creation of a solution that does not pan out, despite the initial excitement.

The cure to both of these problems is found in the design process:

The design process enables designers to be reliable and creative without relying on inspiration.

Checks are provided by the design process to ensure that creative concepts do not deviate from the intended course. (Proxi ityschool.com, 2022)

Design Process Steps

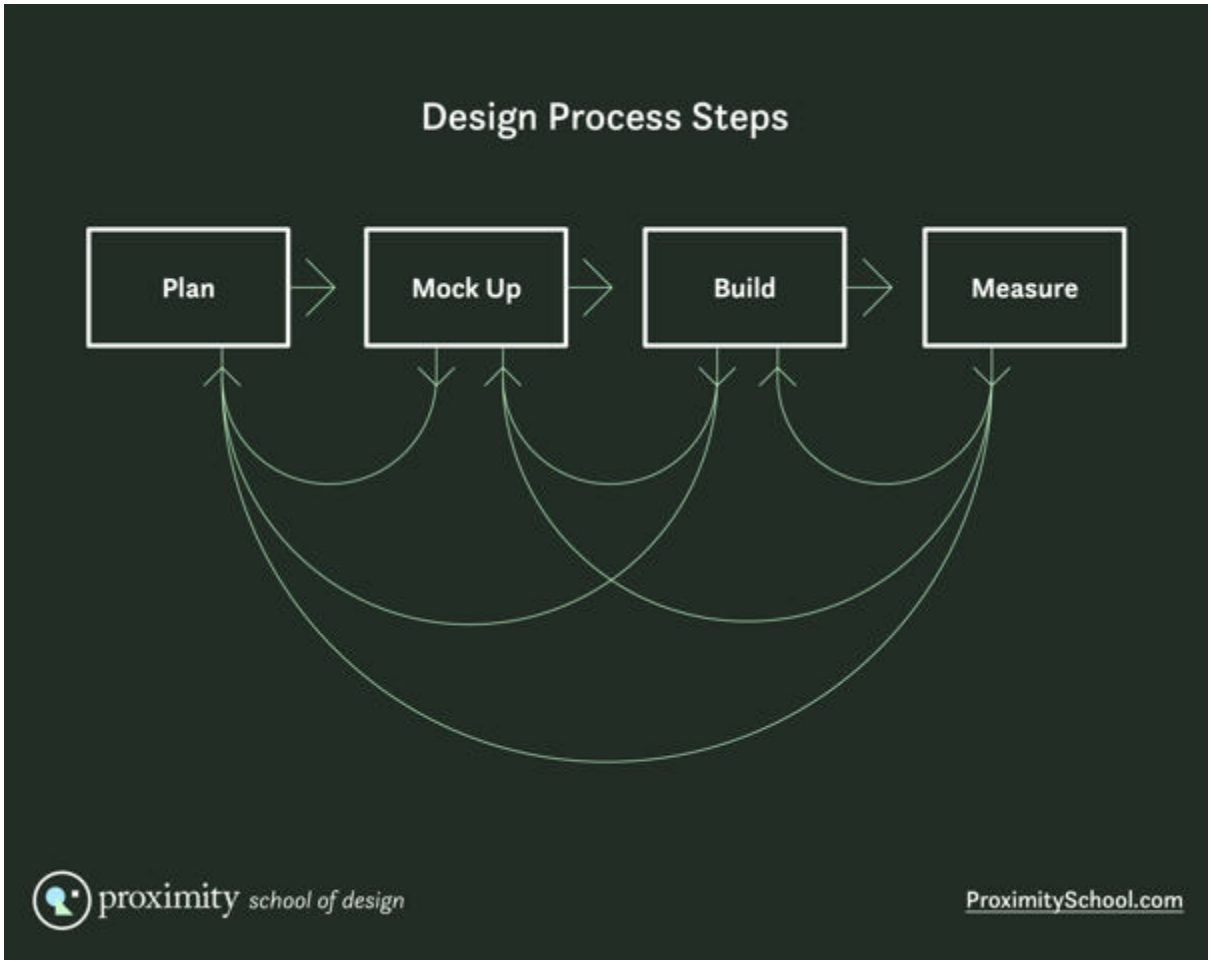

Figure 2-Design process steps-Source- proximityschool.com

Planning

The first step of the design process is considered critical for the gathering of information, requirements, and other necessary data required to make informed decisions later. Depending on the type of design work being undertaken, variations in the tasks performed during the planning stage may exist. However, some variation of the following tasks is executed by all designers:

- Task, problem, or goal definition
- Audience/users research
- Requirements gathering competitors' research, tech specs, features, etc.
- Constraints gathering intentional imposition of creative limits.
- Content and text writing, editing, and development.

- Preliminary sketching and brainstorming: exploration and evaluation of data to ensure comprehensive information is available.

Mock-Up

Creating a mock-up is the design process step most commonly recognized, representing the most visual aspect. The nature of the work varies with the design medium but consistently involves:

- In-depth sketching and brainstorming
- Designing a final, polished solution using design software (Photoshop, Sketch, etc.)
- Revising the solution iteratively
- Creating rough prototypes to privately evaluate the solution.

Build

Despite many designers considering work complete after creating a mockup, they also bear the responsibility of ensuring the correct implementation and utilization of their designs. Consequently, two additional steps are present in the design process. The next step involves building the design:

- Implementing the solution (often with the assistance of other professionals like programmers, printers, or manufacturers)
- Revising the solution as technical issues arise or new aspects are discovered

It is worth noting that design often requires revision during implementation due to unforeseen details emerging, inherent to the complexity of the production process (e.g., programming work). Designers need to collaborate with those implementing their designs, addressing any new issues that arise during production to create a superior product.

Measure

The final step is to measure the success of the design after it is put into use. While good planning enables designers to make informed decisions, no design is flawless, and sometimes the environment changes. Consequently, particularly in digital design, designers are engaged in measuring the design's performance:

- Launching the design and evaluating its performance
- Gathering analytics, testing data, user interviews, sales data, etc.

- Identifying any problems with the design and initiating a mini design process to address each.

How to use the design process

A common misconception is held by many that if each step in the design process is followed, upon reaching the last one, the work is considered done.

The design process is not linear; instead of following the steps in order, for a single project, the entire process is often repeated multiple times (for instance, once for each feature in a software interface) or even jumped back and forth between the steps out of order.

For example, the planning of a project might be completed, and then moving on to creating a mockup is undertaken. While working on the mockup, a new area that requires additional data may be identified. In such a case, work on the mockup is halted, and a return to the planning step is made, where additional research is conducted. (Proxi ityschool.com, 2022)

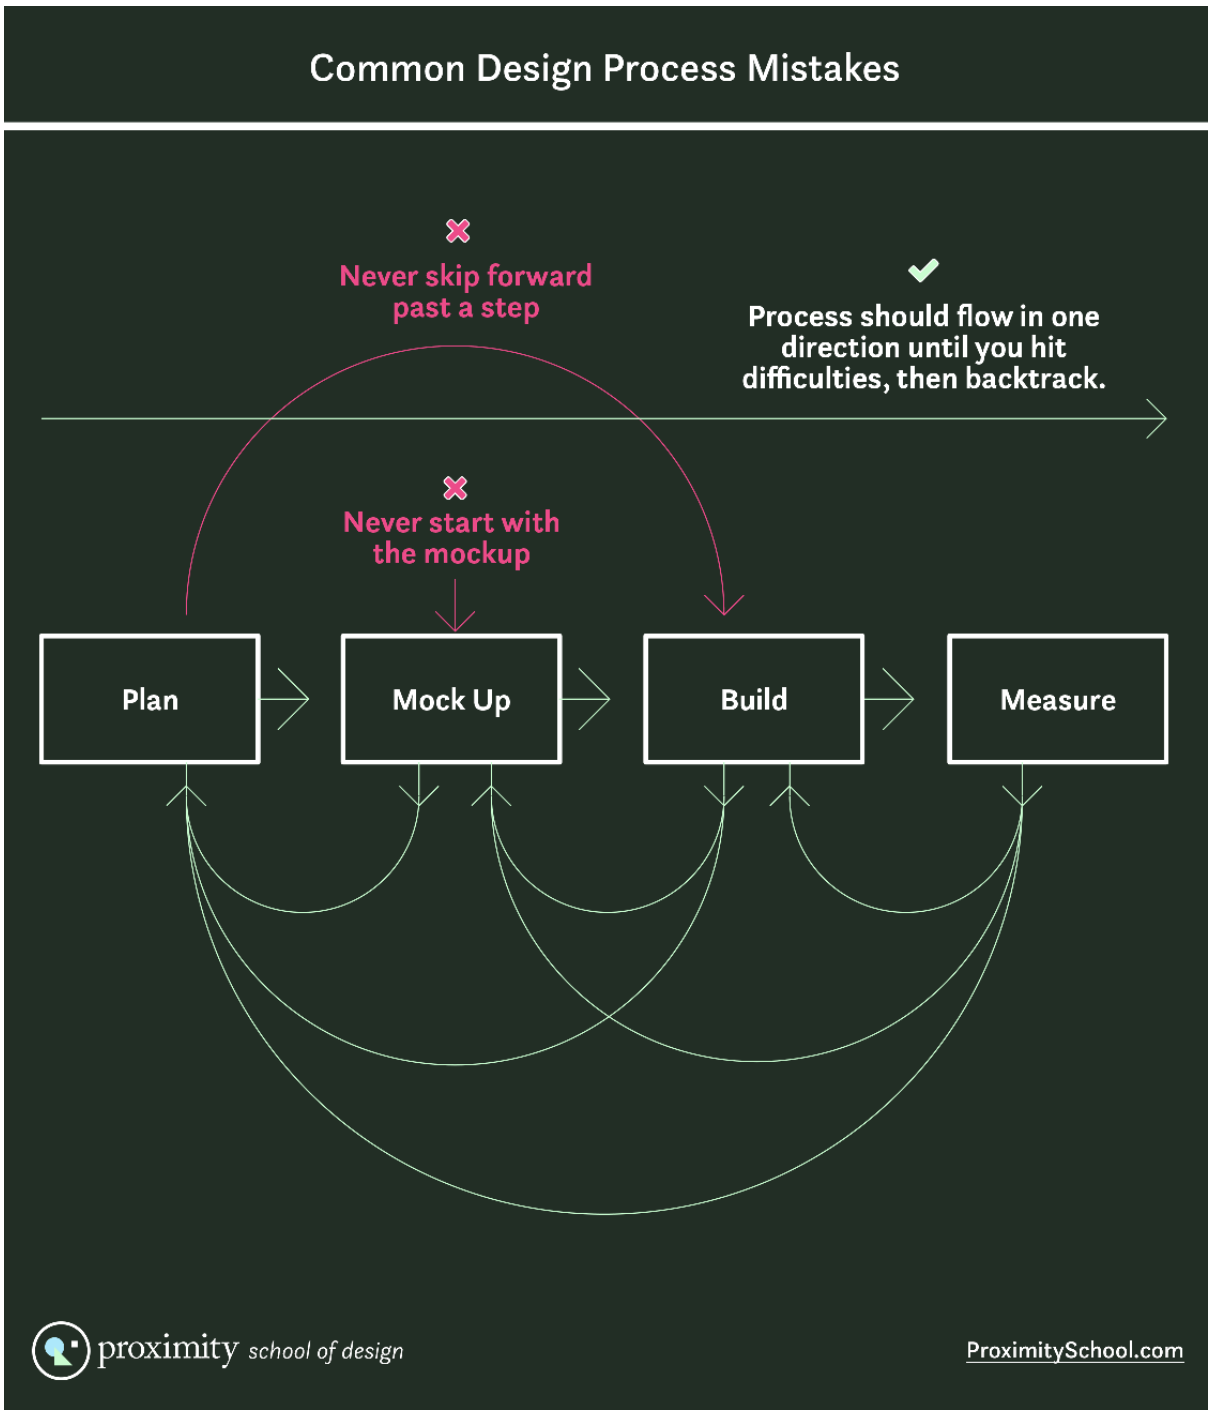

Figure 3-Design process mistakes-Source- (Proxi ityschool.com, 2022)

The design process, although not linear, always starts in the same place: planning marks the commencement of every design project.

When sufficient information is believed to be obtained at each step, progression to the next is made. However, when difficulties are encountered or advancements become challenging, a return to previous steps is undertaken to reevaluate earlier decisions or acquire additional information.

Rather than adhering strictly to the sequential order of steps, a repeated forward-and-backward movement characterizes the design process.

Adapting the design process to individual needs is emphasized. Each designer is encouraged to modify the process to align with their own skills, tastes, and purposes, allowing for more or less time spent at various steps or the addition/removal of steps entirely. Examples are provided to illustrate this adaptability. (Proxi ityschool.com, 2022)

In graphic design, for instance, the planning step involves gathering content, text, images, requirements, and printing specifications. The mock-up step dominates the process, encompassing the creation of layouts, visual styles, and graphics. The build step is comparatively shorter, involving tasks such as preparing design assets for printing. Measurement and evaluation in graphic design are often brief and challenging due to the permanence of printed items. (Proxi ityschool.com, 2022)

In UX (user experience) design, a more extensive planning phase is emphasized, involving tasks like user research, interviewing, writing personas, and job stories. The design process in UX relies heavily on data-driven methods, contributing to more successful design outcomes.

Web design extends the process during the build phase, with designers often staying involved as the concept is constructed, and some even participate directly in coding. The process in various design professions, such as engineering, architecture, and computer science, exhibits similarities in phases despite differing tasks within each phase.

While the design process may vary among designers, its purpose is to facilitate creativity in the long run. Though some designers may be tempted to skip the planning step, following the process is advocated to avoid later complications and ensure designs meet requirements. The process is considered beneficial, leading to better ideas, consistent creativity, and improved project estimation. (Proxi ityschool.com, 2022)

The design process is not seen as restrictive, and its adaptability is highlighted. Designers are encouraged to change the process according to their preferences, with the only stipulation being the inclusion of the planning step.

5.2 Social Media Marketing Activities

In recent years, social media is used for social interaction activities as well as media for doing business. Especially at this time when the whole world is facing the covid 19 pandemic, where most countries make decisions about closing and restricting several physical places, which have been used to carry out business activities, entrepreneurs are trying to optimize digital media and social media as a strategy to market their products. This study aims to determine the role of social media marketing in increasing brand awareness, brand image and purchase intention. The design of this research is hypothesis testing. The study uses the Structural Equation Modeling (SEM) method with a sample of 331 respondents who are active users of social media in Indonesia, for at least 2 years and have purchased products marketed on social media. The results show that social media marketing activities based on entertainment, interaction, trendiness, customization, and word-of-mouth have a positive influence on brand awareness, brand image, and purchase intention. Furthermore, brand awareness has a positive influence in mediating social media marketing activities on purchase intentions, and brand image also has a positive influence in mediating social media marketing activities on purchase intentions. Thus, so that consumer intentions to buy products can increase, online shop owners can increase awareness and positive image of the brand, and to increase brand awareness and positive image of the brand, online shop owners can increase their marketing activities through social media.

To increase brand exposure among consumers, most businesses turn to internet marketing techniques like blogger endorsements, social media advertising, and user-generated content management. Social media is made up of internet-connected programs based on the conceptual and technical tenets of Web 2.0, allowing for the creation and dissemination of user-generated content. Social media is regarded as the most important communication channel for distributing brand information due to its interactive features that make knowledge sharing, collaborative, and participatory activities accessible to a bigger population than in media forms like radio, TV, and print. Social networking websites (Twitter, Blogger, LinkedIn, and Facebook) as well as blogs, internet forums, consumer review sites, and wikis are examples of social media. Collaborations, conversations, and sharing of content are made possible through social media. In addition to social bookmarking, rating, video, photographs, podcasts, wikis, microblogging, social blogs, and weblogs, these social media platforms and apps also come in other formats. Social media is being used increasingly by social networkers, businesses, and governmental agencies to communicate. (Chandrasegaran et al., 2013)

Social media is used for marketing and advertising by both businesses and governmental entities. The seamless interactions and communication between consumer partners, events, media, digital services, and retailers via social media enable integrated marketing activities to be carried out at a lower cost and

with less effort. (Tafesse and Wien, 2018). Key components of marketing campaigns for luxury companies include personalization, repute, trendiness, interactivity, and entertainment, all of which have a big impact on customers' purchase intentions and brand equity. While products are external variables for users, community marketing activities arise from interactions between events and people's mental states However, even when people engage in similar service activities, there is a chance that they will have different thoughts and emotions, which leads to diverse outcomes for users and consumers. Future marketing competition will place a greater emphasis on brand marketing initiatives; as a result, these initiatives should provide customers with themes and sensory stimulation. Now, organizations must not just focus on allowing an outstanding customer experience, but also high-quality features.

Social media is a phenomenon that has become an important aspect in marketing mix and is revolutionizing the way companies interact with their customers. Thus it has become almost mandatory for every business either small or large to mark its social media presence if it wants to gain customer trust, establish expertise, and meet potential customers. It‟s simply not enough to have social media sites up for the business; without a clear strategy for social media use. The business will have to struggle to get the customer engagement levels and increased sales. Social media marketing strategy usually emphasize on efforts to create content that attracts attention and encourages users to share it with their social networks (GOYAL, 2018 JETIR April 2018)

5.2.1 Concept of Social Media Marketing

(GOYAL, 2018 JETIR April 2018)

Social media marketing consists of an attempt to use social media to persuade consumers that one's company, products and/or services are worthwhile. It is marketing using online communities, social networks, blog marketing and more. Social Media Marketing is the process of reaching prospects and customers, and acquiring traffic and visibility through social media sites such as Facebook, Twitter, LinkedIn and many others. Social media networks were relatively unheard of, businesses still preferred to market their goods through physical media such as billboards, pamphlets and direct mail. With past decade, social media has taken the world by storm, online marketing replaced physical traditional marketing mediums, and is now replaced by Twitter, Facebook, Pinterest and other social networks. Social media marketing is not merely about hitting the front page of Digg or any other social news website. It is a strategic and methodical process to establish the company‟s influence, reputation and brand within communities of potential customers, readers or supporters. Social media marketing refers to the process of gaining website traffic or attention through social media sites. Social media marketing programs usually center on efforts to create content that attracts attention and encourages readers to share it with their social networks. The resulting electronic word of mouth (eWoM) refers to any

statement consumers share via the Internet (e.g., web sites, social networks, instant messages, news feeds) about an event, product, service, brand or company. When the underlying message spreads from user to user and presumably resonates because it appears to come from a trusted, third-party source, as opposed to the brand or company itself, this form of marketing results in earned media rather than paid media. A basic definition of social media marketing is “using social media channels to promote your company and its products” (Barefoot & Szabo, 2010, p. 13). An expanded definition is “a process that empowers individuals to promote their websites, products, or services through online social channels and to communicate with and tap into a much larger community that may not have been available via traditional advertising channels” (Weinberg, 2009, p. 3). The communication with a community is highlighted above. Hunt (2009) also emphasis that social media marketing is synonymous with community marketing. Lazer and Kelly‟s (1973) define social marketing as "concerned with the application of marketing knowledge, concepts, and techniques to enhance social as well as economic ends. It is also concerned with the analysis of the social consequences of marketing policies, decisions and activities." Social media marketing (SMM) is defined as “a form of Internet marketing that utilizes social networking websites as a marketing tool. The goal of SMM is to produce content that us (GOYAL, 2018 JETIR April 2018)

discovered through links shared by trusted sources. The rich data available through social media can allow advertisers to target their message to very specific audiences, providing the potential for better results. Thus, Social media marketing (SMM) refers to techniques that target social networks and applications to spread brand awareness or promote particular products. Social media marketing campaigns usually center around:

- Establishing a social media presence on major platforms
- Creating shareable content and advertorials
- Cultivating customer feedback throughout the campaign through surveys and contests

Social media marketing (SMM) is a form of Internet marketing that utilizes social networking websites as a marketing tool. The goal of SMM is to produce content that users will share with their social network to help a company increase brand exposure and broaden customer reach. Social media marketing is perceived as a more targeted type of advertising and is therefore believed to be very effective in creating brand awareness. (GOYAL, 2018 JETIR April 2018)

1. Brendan James Keegan and Jennifer Rowley (2017) significantly contribute to the field of social media marketing strategy by presenting a stage model for evaluating Social Media Marketing (SMM) and addressing associated challenges. Their research establishes a comprehensive Social Media Marketing Evaluation framework with six stages: setting evaluation objectives, identifying key

performance indicators (KPIs), identifying metrics, data collection and analysis, report generation, and management decision-making. The study also highlights challenges at each stage, particularly focusing on the agency-client relationship and the limitations of available social analytics tools. (GOYAL, 2018 JETIR April 2018)

2. Rodney Graeme Duffett (2017) explores the impact of interactive social media marketing communications on the cognitive, affective, and behavioral attitudes of teenagers in South Africa. The study delves into additional factors such as usage patterns and demographic variables and establishes that social media marketing communications positively influence adolescents' attitudes, aligning with the purchase funnel model. The research emphasizes the importance of adapting strategies based on the changing impact of social media on Generation Z consumers. (GOYAL, 2018 JETIR April 2018)

3. Priyanka P.V and Padma Srinivasan (2015) identify factors influencing product purchase through social media from the customer's perspective. They develop a retailer-focused model emphasizing how social media enhances customer loyalty through continuous support services. The study underscores the potential for new applications and platforms to enhance personalization and real-time engagements. (GOYAL, 2018 JETIR April 2018)

4. Christopher Ratcliff (2014) presents a case study on Ford, showcasing the company's successful social media strategy. Ford's approach includes customized posts, user connectivity through tone of voice, and a dedicated social media team actively engaging with followers. The study emphasizes the need for organizations to tailor their strategies, as what works for one may not yield the same results for others. (GOYAL, 2018 JETIR April 2018)

5. Ates Bayazıt Hayta (2013) investigates the effects of social media on young consumers' buying behaviors, highlighting age group and educational status as determining factors. The study underscores the direct impact of social media tools on purchasing behaviors among young consumers. (GOYAL, 2018 JETIR April 2018)

6. Benjamin Ach (2013) focuses on the evolution of business marketing and communication strategies, specifically with the rise of social media. The research underscores the necessity for businesses, regardless of size, to establish an online presence and adapt their models to remain competitive. A case study of an Australian internet marketing company provides valuable insights from industry experts. (GOYAL, 2018 JETIR April 2018)

7. Robert V. Kozinets, Kristine de Valck, Andrea C. Wojnicki, and Sarah J. S. Wilner (2010) review and synthesize Word-of-Mouth (WOM) theory in the context of social media marketing. The study introduces a narrative model demonstrating how marketers face a networked coproduction of narratives. It identifies four social media communication strategies influenced by various factors, offering practical implications for marketers and scholars. (GOYAL, 2018 JETIR April 2018)

8. Hensel and Deis (2010) recommend leveraging social media positively for advertising and marketing, emphasizing the need to address benefits, drawbacks, and challenges associated with specific strategies. The study suggests using social media for tracking online presence and maintaining brand value. (GOYAL, 2018 JETIR April 2018)

9. Edelman (2010) discusses how the Internet and social marketing have transformed business operations and consumer product choices. The study proposes a four-stage model highlighting consumers' use of social media for product advocacy and purchasing decisions based on reviews. It provides insights into the changing customer journey in various industries. (GOYAL, 2018 JETIR April 2018)

10. A BusinessWeek study (2009) examines the hype and potential risks of social media marketing, cautioning about the impact on employee productivity and citing examples of failed campaigns. It emphasizes the difficulty in quantifying outcomes like trust and loyalty resulting from social media efforts.
(GOYAL, 2018 JETIR April 2018)
11. Mangold and Faulds (2009) position social media as a hybrid element in the promotion mix, facilitating both company-to-customer and consumer-to-consumer interactions. The study advocates for shaping consumer discussions in line with organizational goals and fostering engagement through various social media tools. (GOYAL, 2018 JETIR April 2018)

12. Russell S. Winer (2008) describes the use of new media, including social networking sites, by companies to engage customers. The paper outlines challenges in social media marketing from both managerial and academic perspectives. It highlights the growth of social media sites and their role in creating powerful communities with user-generated content. (GOYAL, 2018 JETIR April 2018)

13. Gil, Andres, and Salinas (2007) suggest that family-provided information influences brand equity formation, with families serving as reliable references for purchase decisions. The study notes the influence of virtual friends and internet communications on young consumers' purchasing decisions. (GOYAL, 2018 JETIR April 2018)

14. Lempert (2006) observes a shift in customer behavior away from traditional advertising sources towards social media for information searches and purchasing decisions. Customers seek more control over their media consumption, leading to increased reliance on various social media platforms. (GOYAL, 2018 JETIR April 2018)

15. Yoo et al. (2000) combine brand awareness and brand association into brand image, emphasizing the impact of Word-of-Mouth (WOM) sources on consumer-brand relationships. The study highlights the role of consumer contact with the brand in strengthening brand associations.
(GOYAL, 2018 JETIR April 2018)
In conclusion, the literature review highlights the evolving role of social media as a crucial marketing tool for organizations, providing opportunities to engage with markets and understand customer needs. However, it also emphasizes the challenges posed by the uncontrolled nature of this environment, requiring a robust social media strategy to manage both positive and negative consumer comments.

The impact of peer group influence on online social networks emerges as a significant factor influencing purchase decisions due to its viral nature. The review suggests that an effective social media strategy should complement traditional media channels, such as radio, newspapers, or TV. Social media is recognized as a vital tool for marketing and brand awareness, with an anticipated paradigm shift from traditional advertising to social media platforms in the future. (GOYAL, 2018 JETIR April 2018)

To formulate an effective social media strategy, the review recommends a structured process:

1. Clarify Social Media Goals:
Clearly define specific, realistic, and measurable goals that align with overall business objectives.

2.Audit Current Social Media Status
Understand current connections, identify target audience on social media platforms, and analyze competitor strategies.

3. Develop Content Strategy

Outline the type, frequency, target audience, content creation responsibility, and promotion strategy for posted content.

4. Use Analytics to Track Progress

Regularly monitor analytics using tools like Facebook Insights and Google Analytics to assess campaign performance.

5.Adjust Strategy as Needed

Continuously analyze the campaign, identify successful elements, and revise the strategy, accordingly, ensuring it remains adaptive and effective throughout the social media campaign.

This phased approach ensures that organizations not only establish a presence on social media but also systematically work towards achieving specific goals, leveraging the dynamic nature of the digital landscape. As social media continues to play a pivotal role in the marketing landscape, a well-crafted and monitored strategy is essential for organizations to harness its potential effectively. (GOYAL, 2018 JETIR April 2018)

5.2.2 Facebook

The study presented herein is not without its limitations, necessitating further research in specific areas. Firstly, an extended examination of Facebook promotion strategies over a more prolonged duration would contribute to a more comprehensive understanding of their effectiveness. With only 60 posts related to promotions analyzed in this study, a statistically meaningful analysis was challenging due to the limited dataset. Many companies primarily focus their social media efforts on selling products or services, making it crucial to expand the scope of research to encompass a broader range of promotional activities.

While the current study serves as a preliminary exploration, the findings provide valuable insights that can guide future research endeavors. Future investigations should consider applying similar methodologies to diverse types of brands and businesses or narrowing down the focus to specific industries, such as the care product industry. Evaluating the effectiveness of viral marketing tactics across various Facebook industries could offer a deeper understanding of their applicability and impact.

To gain a holistic perspective on how Facebook users engage with care product brands, subsequent studies should delve into the levels of interaction and relationship dynamics from the user's standpoint. This entails examining factors such as preferred post types, the motivations behind user comments on

posts, and the favored integrated channels for engagement. By addressing these aspects, future research can provide a more nuanced and detailed analysis of Facebook users' behaviors and preferences within the context of care product brands.

5.3 Design with social responsibility

Social action, as defined by Fernandez-Magnou in 2017, is inherently subjective, guided by the behavior of others. This perspective implies that all forms of design are inherently social, as they are directed towards human actions and do not exist in isolation. The term "social design" is deemed unnecessary and vague, leading the author to propose the use of "socially responsible design" to better encapsulate the field. The emphasis on social responsibilities, implications, and the potential influence of designers is seen as crucial, particularly in graphic design and visual communication where these responsibilities may be less apparent.

The author argues for a reevaluation of the designer's role, suggesting that graphic design should not merely downplay its persuasive aspects related to the business world. Instead, designers should recognize the potential of persuasive tools and explore how these can be applied to address the needs of organizations driven by rationality beyond mere consumption-oriented goals. The author advocates for an active role of designers, especially when working with community organizations or non-profits, stressing the importance of acknowledging the power of design skills and encouraging participation among social actors from the outset.

To achieve socially responsible graphic design, the author emphasizes a shift in mindset – a way of being towards design. The proposal is to view visual communication as an exchange between various actors involved in the design process, rather than as something static and isolated. This approach aims to move away from a solipsistic understanding of the designer and towards a more dynamic and socially engaged perspective.

The author cites the "Mean Business" campaign (2015) as an exemplary case of socially responsible graphic design. Created by DoItAll in collaboration with 3x3 Studio and AIGA/NY, the campaign aimed to expedite access to business development services, raise awareness about neighborhood changes due to rezoning, and empower small business owners to form a united merchant alliance. The campaign, born out of on-location investigation, illustrates how graphic design can actively engage with and benefit communities by promoting cooperation for the betterment of a specific area.

5.4. Accountability to the community

Research identifies a set of responsibilities that designers should fulfill towards their communities, highlighting specific tasks that each designer can undertake in their respective areas of expertise to contribute positively to society. Central to this perspective is the belief that designers should treat others with the fundamental decency they deserve. This includes treating individuals equally and with respect, acknowledging and addressing the challenges people face, and creating work that is not only aesthetically pleasing but also educational and based on genuine needs.

The approach emphasizes the importance of educating and enlightening people so that they can make informed decisions about their actions, behaviors, and consumption choices. It discourages solutions that patronize or underestimate the intelligence of the audience, as well as those that exploit specific demographic segments. The goal is to empower the audience with knowledge about effective communication, fostering the ability to deliver accurate and succinct messages.

Building connections with the audience, understanding them on a personal level, and establishing trust are key aspects of these responsibilities. Additionally, it involves maintaining a level of professionalism that reflects decency and respect for fellow designers and the graphic design industry as a whole. Authentic communication within the designer's field of work is crucial, ensuring that messages align with the values of transparency and honesty.

The impact of these duties on a designer's workflow becomes evident when working for a company or organization with a mission rooted in corporate social responsibility practices. In such cases, the designer's work would align with the policies and procedures established by the organization, reflecting a commitment to ethical design practices and societal well-being. These responsibilities shape how designers approach problem-solving and guide their actions throughout the design process, fostering a socially conscious and responsible approach to their work.

5.5 Satisfaction

Customer loyalty and community involvement are impacted by community satisfaction. (Jamil et al., 2022). In order to determine if a customer is satisfied, expectations and post service satisfaction are compared against benchmarks derived from a collection of prior experiences. According to the implementation confirmation theory, satisfaction is the degree to which a customer's expectations of the services have been met. Customers typically gauge their degree of satisfaction by contrasting it with

their past levels of satisfaction. Recent research indicates that consumer loyalty and community involvement are impacted by community satisfaction. The satisfaction level of a study community is ascertained by the ratings given by its members. It is possible to assess the community based on prior exchanges. Joyful emotions show that members of the community are content, and this has an impact on how the other members behave. To put it succinctly, contentment breeds loyalty and active engagement in the community.

5.6. Typography

Typography is a field that combines both science and art, with a rich history spanning several hundred years, and even thousands of years if we include its ancestor, calligraphy. For a beginner in typography, there is a vast amount of knowledge and rules to navigate. These rules include guidelines such as the use of serifed fonts for improved readability in body texts, while sans serif is considered suitable for advertising and posters. Additionally, optimal numbers of words per line and lines per page are considered crucial aspects.

Some of these rules are rooted in aesthetics, while others claim to be based on the neurophysiology of reading. The challenge arises when these recommendations, even from renowned typographers, can be contradictory, adding to the confusion for those entering the field.

The author draws parallels between the history of typography and the history of medical science. Centuries of practical experience in medicine resulted in numerous rules and methods, some of which are now recognized as reasonable, while others have proven ineffective or harmful. Modern evidence-based medicine aims to approach medical rules more scientifically, placing empirical knowledge within a formal framework. (Veytsman, 2011 January)

The talk explores the possibility of applying an evidence-based approach to typography. While the subjective beauty of a book page may be challenging to measure, readability and understandability of text can be quantified based on fonts, type area dimensions, and other typographic parameters. Recent studies have questioned traditional typographic notions, such as the use of serifed fonts, text layout, x-height, and more. These studies have been stimulated by new technologies and applications, including signage, messages, and situations like texts for low vision readers or medical data. (Veytsman, 2011 January)

While the majority of published studies focus on English texts, the author notes a lack of comparable research on Cyrillic scripts and text perception by Russian readers. The group is actively working on a large-scale study of the neurophysiology of reading for Russian subjects, aiming to create a database of readability and understandability based on typographic parameters for Cyrillic texts. The paper provides a literature review and discusses the experimental setup for this research endeavor. (Veytsman, 2011 January)

The ecological hypothesis and its consequences

In the realm of psychophysiology of reading, legibility and readability are considered the easiest factors to measure. Legibility refers to the ability to distinguish between letters, while readability pertains to reading words without errors. Numerous studies aim to correlate these metrics with text typography, yielding results that may surprise practitioners. For instance, it appears that uppercase text may be more readable than lowercase, and the impact of serifs on legibility remains unclear. However, comparing fonts introduces confounding factors, as fonts encompass various features beyond just serifs. (Veytsman, 2011 January)

The influence of font size on legibility and readability is a more straightforward aspect to study. Recent research indicates that legibility suffers when fonts are too small (x-height smaller than about 4 pt) or too large (x-height larger than about 40 pt). Within these limits lies the "fluent reading range," where reading ease is relatively independent of font size. The hypothesis suggests a quasi-Darwinian origin, implying that publishers consistently producing copy outside the fluent range might face commercial challenges. Interestingly, certain texts, such as small print in legal contracts and drug inserts, intentionally fall outside the fluent range, supporting an ecological hypothesis. (Veytsman, 2011 January)

While some experiments indicate that typography matters, the conclusion that typography does not matter at all is unwarranted. Studies, such as Lewis and Walker's examination of reaction times to different font weights, demonstrate that the font in which text is typeset can influence perception. For instance, bold text may elicit faster reactions than light text. Additionally, experiments by Brumberger suggest that font choices impact readers' impressions of the author. These findings suggest that typography may be crucial for various aspects of reading beyond just readability or legibility.

Considering that the goal of a book extends beyond error-free reading to conveying a meaningful message to the reader, the importance of typography becomes evident. (Veytsman, 2011 January)

5.7 Graphics

In the process of design development, it's crucial to recognize that consumers assess labeling and social media posts differently. Additionally, packaging design plays a significant role in influencing the consumer's association with a product. For less-involved items, elements such as graphics and color are key considerations, while highly connected products may require a different approach where image considerations become less important.

Graphics encompass various design elements like image organization, color scheme, typography, and product photography, all working together to create a cohesive visual representation. Effective imagery serves as a powerful tool to convey a brand's message, creating visually compelling content, memorable moments, and recognizable touchpoints. Well-crafted graphics help products stand out on shelves, attracting customers with visually appealing elements.
Detailed product information is often conveyed through graphics, shaping the overall branding and identity of a product. In today's fiercely competitive global market, companies and manufacturers must continually innovate in terms of concepts, components, and designs to stay relevant. Graphics play a crucial role in communicating a brand's ideas, its commitment to customer emotions, and its responsiveness to current circumstances.

An example illustrating this concept is the label design for Dettol hand wash. Dettol, a renowned hygiene company, modified the hand wash symbol to feature images of COVID guardians along with their motivational stories. This adaptation reflects a shift towards more serious advertising as consumer sentiments remain subdued, and discussions about the pandemic continue to dominate daily life. Brands embracing such changes are likely to resonate with customers who appreciate and connect with this depiction of resilience and commitment (Analysis & Sorwar, 2021).

The analysis of the graphic design plat foam used in social media marketing.

The advent of the internet has significantly shaped the landscape of marketing, leading to a paradigm shift where organizations have transitioned their marketing activities to the digital realm. Within digital marketing, social media marketing has emerged as a pivotal element, playing a central role in

contemporary business strategies. To enhance and complement social media marketing efforts, graphic design has become an integral component of content strategy.

This paper delves into the crucial role of effective visual content in social media marketing and explores various tools that facilitate and enhance its creation. Recognizing that social media users actively engage with visual content, organizations strive to enrich their posts with compelling visuals to foster higher engagement. The competitive nature of social media platforms necessitates the creation of visually appealing and attention-grabbing content.

The primary objective of this paper is to analyze the effectiveness of online graphic design tools specifically tailored for creating visual content that aligns with the communication requirements of social networks. Given the significance of visuals in social media marketing, a plethora of online tools has been developed, each offering unique features to support content design. These platforms provide extensive customization options, a diverse array of editing tools and templates, and varied functionalities.

Visual content, when strategically employed on social media platforms, not only enhances brand awareness but also facilitates stronger user associations with organizations. The paper conducts a comprehensive literature review in the field of social media marketing, emphasizing the importance of visual elements and graphic design in online marketing communication. Furthermore, a comparative analysis of commonly used online tools and platforms is presented, shedding light on their role in boosting the effectiveness of online marketing campaigns.
(Mitrović, 2020)

The evolution of the Internet and the rise of social networks have given rise to a new business model where maintaining a strong presence on social media is considered a competitive advantage for brands. In this context, social media marketing has become an integral component of digital marketing, playing a vital role in overall marketing strategy (Ahmad et al., 2016). Social media serves as a platform that brings together diverse audiences to create, modify, share, and discuss internet content (Tafesse, 2015). To thrive in the digital market, brands must generate marketing content tailored for their audience and strategically distributed across relevant social networks.

The significance of well-designed content cannot be overstated, as it forms the foundation of a brand's online presence (Gunelius, 2010). Visual content, in particular, plays a crucial role in driving social

media exposure, engagement, and website traffic. To make visual communication both attractive and effective, the involvement of graphic design in marketing communication is essential (Abdel-Rahim and Ali, 2016).

To streamline the process of creating visual content and merge technology with art, a plethora of online platforms have been introduced. This paper aims to analyze the most commonly used online tools and platforms that offer graphic design solutions, enhancing the effectiveness of online marketing campaigns. The analysis will present and compare the most relevant platforms. To assess the usage of these platforms, web analytics are conducted using SimilarWeb, an online platform for website traffic statistics and analytics. The findings from this analysis will shed light on the functionalities and features of the most visited platforms, highlighting those that are most suitable and effective for social media marketing. (Mitrović, 2020)

Content marketing is a strategic approach employed by brands to create and share compelling stories (Baltes, 2015). The Content Marketing Institute defines it as a method focused on generating and disseminating valuable, relevant, and consistent content to attract, retain, and drive profitable customer action (Content Marketing Institute, 2020). This approach emphasizes providing customers with valuable information and ideas, and high-quality content plays a crucial role in driving engagement on social media, contributing significantly to social media marketing campaigns (Ahmad et al., 2016).

Brands face the ongoing challenge of producing and sharing content that not only establishes but also sustains recognition on social media platforms (Chauhan and Pillai, 2013). Customers expect content that creatively and attractively addresses their queries. Interactive and visual content, such as videos, is preferred by 91% of consumers, emphasizing the role of graphic design in meeting customer expectations on social networks (Gartner, 2019). Graphic design is considered a visual element that guides customers through intended messages, contributing to a stellar visual experience (Tresnic Media, 2020).

When brands engage with audiences on social media, they must demonstrate the value of their content. Creating valuable content positions them as authoritative and contributing members of the social web community (Gunelius, 2010). Given the visual nature of social media, content design becomes crucial, and the collaboration of marketing and graphic design shapes social media spaces. Graphic design helps present messages through innovative design elements, ensuring an exceptional visual experience for the audience. Capturing the audience's attention is a primary driver for marketers to integrate graphic design into their content strategy, as design influences the aesthetics and user-friendliness of social media networks. Various graphic elements, including infographics, videos, mailers, and animations, are employed to execute visual marketing strategies (Abdel-Rahim and Ali, 2016). (Mitrović, 2020)

6. Methodology & Work plan

6.1 Methodology (Agile Methodology)

The methodology chosen for the promotional campaign is the Agile method, a dynamic and iterative approach that is well-suited for the fast-paced and evolving nature of marketing projects. Agile methodolgy is suitable for this kind of team work donation campaign

Figure 4-Stages of Agile Development (Source: https://www.smartsheet.com)

6.1.1 Requirements

The preliminary stage entails an exhaustive examination of the campaign specifications. This entails comprehending the intended recipients, delineating crucial communications, and undertaking competitor analysis to detect deficiencies and prospects in the market (Smith & Johnson, 2022). This phase with the user in mind establishes the groundwork for subsequent endeavors.

6.1.2 Plan

Once the necessary conditions are met, the planning stage commences. The group delineates an all-encompassing strategy that comprises precise objectives, tangible products, and schedules for every facet of the campaign (Kerzner, 2023). This strategic plan guarantees the efficient allocation of resources and team alignment with the campaign's goals.

6.1.3 Design

During the design phase, both written and visual content are developed. In order to manifest creative concepts, graphic design software such as Adobe Photoshop and CorelDRAW, in addition to collaboration tools like Figma, are employed. During this stage, Graphic Design Sri Lanka (2020) verifies that the promotional materials are in accordance with the established brand identity and effectively connect with the intended audience.

6.1.4 Develop

During the development phase, web design tools such as WordPress are utilized to construct a campaign website that is both dynamic and intuitive for users. Video content that is produced with the assistance of Adobe Premiere Pro is meticulously edited to guarantee its appeal and congruence with the overarching theme of the campaign. The Unity Engine is employed in the development of interactive content, thereby enhancing the user experience by providing cohesion and immersion (Software and Hardware Requirements, 2019).

6.1.5 Release

During the release phase, the promotional campaign is implemented across multiple channels. This entails the introduction of the campaign website, dissemination of promotional materials via traditional media channels, and incorporation of content into social media platforms. Consideration is given to the preferences and behaviors of the target audience when scheduling the release in order to maximize its impact and reach (Chang & Wang, 2019).

6.1.6 Track & Monitor

Agile emphasizes continuous surveillance and monitoring due to its iterative nature. The utilization of analytics tools enables the real-time evaluation of the effectiveness of every promotional element. By utilizing a data-driven methodology, it is possible to make iterative adjustments and improvements to strategies during the course of the campaign, thereby ensuring their optimal effectiveness (Schwalbe, 2023).

6.2 Work Plan

6.2.1 Pre-Production

IdeaHub Solutions Pvt Ltd is a multimedia solutions company. This promotion campaign and the marketing services under “Hope For Tomorrow”for promoting Littlebud foundation who colleting donation from public and help to the children who don’t have their essentials.

Multimedia team

- Rajika Rathnayake - Project Manager/ UI/UX Designer
- Amitha Udagagama - Web designer and Developer
- S.Kabilan-Video Specialist
- S. Shagana-Audio Specialist
- R.Salujan- Graphic Designer
- Nalitha Davinda – 2D and motion Graphic Designer

6.2.1.1 Project Manager Role

6.2.1.1.1 Research about project manager role

Under this role, as a first step, done an initial research about the project manager role and the responsibilities by project manager, which was documented here.

"Being a Project Manager is like being an artist, project manager have the different colored process streams combining into a work of art." **– Greg Cimmarrusti**

At the heart of successful project management is a project manager, who like the 'captain of a cruise ship', ensures a smooth ride. When it comes to the roles and responsibilities of the project manager, it starts with creating strategies, delegating tasks, monitoring progress, ensuring coordination among team members, and collaboration.
However, if people think people could master these skills, and become a successful project manager, slow down, my friend! There is still a lot to come. Intriguing tasks like team building, acting as a bridge between project manager team and the client, and ensuring timely completion are all part of the project manager's tasks. (Kashyap, 2023)

Project Manager Roles and Responsibilities

Roles define what people need to do for the project. These roles define how people relate project manager to project manager team members and customers. Responsibilities are further dependent on project manager role.

Responsibilities are day-to-day activities and tasks that project manager do every day in the office. These activities and tasks together contribute to accomplishing project manager role as the project manager. These responsibilities may vary depending on the stage of the project and several other reasons.

1.Make coordination with the team

Let's take an example of a website-building company. Project manager will first start by making a bigger picture of the major attributes to which project manager company contributes. This primarily depends on project manager customers or the niche in which project manager business serves. Defining the role of HR would be limited to hiring and other practices related to administration. Similarly, developers would focus on coding and developing websites.

However, as a project manager, project manager role would be the center to hold the entire project together. Ensuring enough manpower and resources, and conveying task details to individual team members are all roles of a project manager. (Kashyap, 2023)

2. Keeping the team close-knit

Focus on building a team that 'works together'. Start by defining primary roles for the departments. To simplify this process, define goals! When project manager know what project manager goals are, project manager will be able to define roles for each department with ease. (Kashyap, 2023)

With clearly defined roles, maintaining harmony in the team and fostering trust within its people is the next process so that everyone can achieve more and achieve fast.

- For this, project manager need to ensure that:
- Every member of project manager team gets regular feedback.
- Everyone understands their individual tasks.
- Everyone communicates well.
- The team has enough resources and tools for effective collaboration.

3. Delegating work effectively

As a project manager, it becomes critical to delegate tasks to project manager team members effectively. It is a leadership style that every project manager has to learn and adapt. Project manager should not misuse this responsibility by blaming or degrading project manager team members.

Project manager should understand the strength and weaknesses of project manager team members and delegate the tasks to them accordingly. Project manager team members must be able to prioritize tasks. (Kashyap, 2023)

- This is where project manager need to think smart!
- Think out-of-the-box!
- How about getting help from a project management tool?

This will simplify not only the delegation process but also help in effectively managing the schedule of the project.

4. Employee feedback

Of all the roles project manager are involved in as a project manager, gathering employee feedback plays the most crucial role. As the project progresses, it is essential to review the performance of project manager team members.

It is obvious that over the course of the project, the roles of different individuals may change. Therefore, such reviews will help in providing feedback to project manager team members about updates.

It is important to note here, that the objectives of the company might not have changed, but the way to reach there would have. This is the reason why project manager need to be in close proximity to project manager team at all times. (Kashyap, 2023)

5. Planning everything from execution to delivery

Ideally, project manager should have a strategy to achieve more in less. By more I mean, more outcomes, more quality, and more client satisfaction, while less refers to less resources and less time. In simple words, project manager must chalk out a pathway that will help project manager to complete the project successfully and efficiently. Project manager could use any approach like Agile, Waterfall, etc. However, remember that project manager team should also be comfortable working in this environment. (Kashyap, 2023)

All in all, for strategies and planning project manager project manager skills should involve

- Breaking the project into tasks and sub-tasks.
- Steady progression by taking up tasks in small chunks.
- Setting an appropriate schedule for the development of certain deliverables.
- Defining milestones.
- Highlighting the project dependencies.

6. Directing the team to achieve a common goal

Project manager should ensure that project manager team is on the right track toward success.

- Have project manager ever seen what a good shepherd does?
- He guides all his sheep and goats on the track toward greenery.

Similarly, keep project manager team members motivated, so they continue moving on the right track. It is project manager responsibility to ensure that project manager team showcases their full potential. In some instances, project manager will have to own up tasks of other domains. (Kashyap, 2023)

For wisely directing project manager team project manager project manager attributes must be similar to that of human resources like

Negotiating current employees' job responsibilities,

Managing their time, and achieving their commitment to the project,

Bids may be required, and Contracts will need to be reviewed and keeping everyone in check to make sure that the team moves along in accordance with the plan.

Moreover, implement Agile practices in project manager teams. This is how project manager can improve the accountability of the team members. This would help the team become cross-functional which would mean that project manager will be making the team:

- More adept to taking on challenges and dealing with changes in client requirements.
- More capable of coordinating with clients and juggling responsibilities,
- More comfortable with changing roles and working in more niches than just one.

7. Managing time

Time is the most crucial resource in project management. This decides the base on which the entire project revolves. Project manager should be able to negotiate deadlines on behalf of project manager team members.

Effective time management is possible through strategic planning and scheduling. Delegate tasks to project manager team members and set a deadline. (Kashyap, 2023)

8. Monitoring progress and tracking roadblocks

This is the most time-consuming part of project manager daily work routine. There are a lot of technicalities related to this phrase. Excessive monitoring may cause resentment among project manager team members. And at the same time if project manager do not have real-time updates on the project progression, then project manager will not be able to forecast timely completion. (Kashyap, 2023)

Identifying bottlenecks early also plays an important role in the timely completion of a project. When project manager forecast project manager available resources effectively, project manager will be able to face sudden challenges related to resources and solve them with ease. (Kashyap, 2023)

9. Conducting regular meetings

The first thing before conducting meetings is that project manager should prepare an agenda. This will ensure that project manager team is aware of the purpose of the meeting.

“Growth is never by mere chance; it is the result of forces working together”. – James Cash enney

Regular team meetings depend on the project methodology project manager are working on. In Scrum methodology, there is a 15-minute meeting every day. This is the time for project manager to establish a status quo with project manager new team members. (Kashyap, 2023)

If project manager are using a project management tool, then it is not important to have daily meetings or long meetings. As long as project manager team members are on the same page, project manager can let them work independently. Modern workplaces have very short meetings that are mostly focused on the agenda that is shared well before the meeting starts.

10. Establishing a shared vision

Project manager vision should match the vision of the business. This is how project manager will be able to focus project manager efforts in the right direction.

Then comes the part where project manager convey this to project manager team members. Having all project manager team members on the same page is necessary for motivating and inspiring the team. (Kashyap, 2023)

In order to establish a shared vision, project manager need to bring enthusiasm and positive vibes into project manager team. This helps project manager team to understand the workload and make all possible efforts to convert goals into missions.

Project manager is responsible for setting the appropriate tone for smoother sailing down the road. A vision fosters team cohesion, boosts creativity and motivation, and imbibes a purpose that helps in the successful and timely completion of the project. (Kashyap, 2023)

11. Managing documentation and reports

As the project progresses, there will be hurdles, milestones, and other issues that may creep up. It is essential for project manager to maintain a record of time and budget.

These documents and reports will come in handy for identifying areas where there is a need for improvement in future development programs. Also, these documents will help project manager to prepare reports for submission to clients.

Further, these documents play two additional functions, in the overall project progression

- To maintain a record of what has been done in the project and who has been involved in it.
- To ensure that the project satisfies all the project requirements.

13. Coordinating with the clients

Project manager responsibilities also include coordinating with the clients! Not as easy as this sounds, this can in some instances become challenging.

Project manager are primarily responsible for negotiating the requirements of the project with the clients and the stakeholders. It is necessary for project manager to bring clarity to the clients about how they should go about the project and everything that the team can do for them.

As a PM, project manager become the bridge between project manager team and the clients. Any changes or feedback from the client should be conveyed to the individual team member in the most effective manner.Bear in mind, the following points for smooth coordination Share feedback often for continuous improvement of project manager team, as well as the performance of the whole project. Appreciate positive feedback and celebrate accomplishments. Avoid the blame game, especially in case of negative reviews. (Kashyap, 2023)

What does a project manager do?

A project manager plays a crucial role in planning, executing, and closing projects. The role involves a wide range of responsibilities to ensure that a project is completed successfully, on time, and within budget.

This becomes the project manager’s responsibility to complete the company’s most important projects, and for this, project manager will have to polish project manager leadership skills, coordination abilities, and motivational skills continuously.

The importance of a project manager

1. Realistic planning

A successful project depends hugely on planning and creating a strategy. Never underestimate the planning phase. Random estimates and approximate delivery dates are recipes for project failures.

This is where project manager lay the foundation for the project. The smooth project progression and the timely completion of the project depend completely on effective and realistic planning. (Kashyap, 2023)

2. Set clear focus and objectives

Try letting project manager team members work on a project without proper objectives and focus. Project manager will see them create a muddle out of the project!

As a project manager, it is project manager responsibility to set guidelines for the steady flow of the project. Right from start to end, project manager need to ensure that project manager team members stay on track in order to ensure timely completion of the project. This is like herding a sheepfold safely from the barn to the pasture. (Kashyap, 2023)

3. Simplifying complex issues

Project manager expertise as a project manager shows when project manager break down tasks into manageable chunks for project manager team. This helps them in setting priorities as well as milestones.

This will contribute towards the timely completion of the project. Project manager will be able to handle complex issues with better agility when working on small tasks.

“I would like to take project manager back to 2017, the controversy around Google’s diversity memo. Sundar Pichai, the CEO of Google, and Alphabet Inc. handled this incident with transparency, inclusivity, and grace.

His skills as a seasoned manager were on display when he organized town hall meetings to address this issue. He did not focus on trying to silence the employee and ignore the issue but rather chose to openly discuss this issue portraying diversity and inclusion. He also reaffirmed the company’s commitment to a supportive and inclusive work environment.“

Although the example is of a CEO, while we are talking about project managers, my aim here was to portray how to act quickly and respond to critical issues effectively. These are the skills that define a successful project manager and sets them apart.

4. Quality control

A team can complete projects on time, but the essential component is ensuring quality. Completed projects may become useless if they do not fulfill quality requirements.

A project manager ensures the quality of the project by defining standards. This lets the team members know what they are aiming for.

5. Cost factor

As per a study, 9.9% of every dollar is squandered due to poor project performance. A project manager helps in saving a lot of money for the organization.

As a skilled project manager, project manager should be able to improve efficiency, mitigate risks and optimize resource utilization. All these factors help in combating the waste of resources and help in the growth of the organization.

What qualifications do project manager need to be a project manager?

Let’s now talk about the point of qualifying to become a project manager.

If project manager believe project manager have the capabilities of being a project manager, project manager need to authenticate them in the form of certificates or experience.

Getting a (PMP)® certification is one of the key requirements for becoming a project manager. Project managers having this certificate have an elite identity. They showcase leadership and expertise in working.

Project Management Professional (PMP)®

This certification is valid across the globe. However, to get this certificate project manager need commitment and perseverance. Along with real-world project management experience, the basic requirement to qualify for this certification includes

A four-year degree

- 36 months of experience leading projects in the past eight years35 hours of project management education/training or CAPM® certification
- Or in case project manager have a high school diploma, then project manager will require.
- 60 months of experience leading projects in the past eight years.
- 35 hours of project management education/training or CAPM® certification

After identifying key roles and responsibilities, the project manager listed task list for person who act PM role in IdeaHub solutions and assigned below task list according to project.

- Entire research about job roles, sustainable agriculture/Rural area farming/ and sustainable solutions for problems.
- Define problem and figure out solutions.
- Define the aim, objectives, and scope.
- Define multimedia solutions and Finalized Deliverables
- Creating detailed project plan and cost plan
- Resource planning, creating tasks, and assigning.
- Milestone planning and scheduling
- Project kikoff meeting
- Solve issues that arise in the project.
- Consider dependencies, Blockers and providing solutions for team.
- Evaluate Project Performance
- Conducting daily stand-up using teams and getting daily updates
- Arranging a catchup meeting
- Final Product Demo
- Handover project

Under the above task list, this project was initially started with understanding requirements and deep market research by the project manager. Consider the preferences, needs, and challenges of the target audience. ,in-depth research done and shown by project manager for IdeaHub Solutions Pvt. Ltd below.

6.2.1.1.2 Research about team roles and responsibilities

1.	Project Manager	● Develop a comprehensive project plan outlining objectives, timelines, and

		deliverables. ● Define project scope, goals, and success criteria. ● Identify and allocate resources, including team members and budget. ● Develop a comprehensive project plan outlining objectives, timelines, and deliverables. ● Define project scope, goals, and success criteria. ● Identify and allocate resources, including team members and budget. ● Establish effective communication channels within the team and with stakeholders. ● Provide regular project updates to stakeholders, ensuring transparency. ● Address and resolve conflicts within the team. ● Identify potential risks and develop risk mitigation strategies. ● Monitor and manage risks throughout the project lifecycle. ● Implement contingency plans when necessary. ● Develop and manage the project budget. ● Monitor expenditures and ensure adherence to financial constraints. ● Report on budgetary status to relevant stakeholders. ● Create and maintain a project timeline. ● Monitor progress against milestones and deadlines. ● Adjust timelines as necessary and communicate changes. ● Implement and oversee quality assurance

		processes. ● Ensure that project deliverables meet predefined quality standards. ● Conduct regular reviews and evaluations. ● Identify and engage with project stakeholders. ● Manage stakeholder expectations and communication. ● Address concerns and feedback from stakeholders. ● Respond to changes in project scope, schedule, or objectives. ● Adapt plans and strategies to accommodate unforeseen circumstances. ● Maintain flexibility in the face of evolving project requirements. ● Maintain accurate and up-to-date project documentation. ● Create and manage project reports, including status updates and performance metrics. ● Ensure documentation complies with organizational standards. ● Conduct a thorough project evaluation upon completion. ● Facilitate project closure, including documentation and knowledge transfer. ● Capture lessons learned for continuous improvement. ● Ensure customer satisfaction by meeting or exceeding expectations. ● Solicit feedback from customers and stakeholders. ● Address customer concerns promptly and effectively.

		• Uphold ethical standards and ensure project activities align with organizational values. • Foster a culture of integrity and professionalism within the project team.
2.	Web Designer and Web Developer	• Create visually appealing and user-friendly website. • Design intuitive user interfaces to enhance user experience (UX). • Ensure the visual elements align with the brand and project goals. • Develop wireframes and prototypes to illustrate design concepts. • Iterate and refine designs based on feedback and testing. • Implement the visual elements designed by the web designer using HTML, CSS, and bootstrap and java script • Ensure the website is visually consistent and functions seamlessly. • Develop server-side logic and database structures. • Implement functionality and features to meet project requirements. • Write clean, maintainable, and efficient code. • Debug and troubleshoot issues to ensure optimal website performance. • Implement security best practices to protect the website from vulnerabilities. • Ensure secure data storage and transmission. • Integrate APIs and third-party services for added functionality. • Ensure smooth communication between

		frontend and backend systems. ● Conduct thorough testing of the website's functionality, including unit testing and integration testing. ● Address and fix bugs and issues identified during testing. ● Optimize website performance for speed and responsiveness. ● Implement caching strategies and other optimization techniques. ● Collaborate with designers, project managers, and other team members. ● Provide input on technical feasibility and contribute to project planning.
3.	Video Specialist	● Plan and execute the end-to-end video production process. ● Conceptualize, script, and storyboard video content. ● Operate cameras and other filming equipment. ● Capture high-quality footage, considering composition, lighting, and audio. ● Edit and assemble raw footage into a polished, final product. ● Use video editing software to enhance visual and audio elements. ● Create motion graphics and animations to enhance video content. ● Integrate visual effects and animations seamlessly. ● Edit and enhance audio elements, including background music, voiceovers, and sound effects.

		• Ensure optimal audio quality and synchronization. • Adjust color balance, saturation, and contrast for visual consistency. • Apply color grading techniques to achieve a specific look or mood. • Optimize videos for different platforms and devices. • Ensure compatibility and optimal viewing experience across various channels. • Work closely with creative teams, directors, and clients to understand project requirements. • Incorporate feedback and iterate on video content based on collaborative decisions. • Maintain and troubleshoot video equipment to ensure proper functioning. • Stay updated on advancements in video production technology. • Ensure video content aligns with brand guidelines and messaging. • Maintain a consistent visual style across all video productions. • Implement video distribution strategies across various platforms. • Monitor video analytics and engagement metrics to assess performance. • Keep abreast of video production trends,
4.	2D and motion graphics designer	• Creating visually stunning motion graphics and animations for various digital media platforms

		● Utilizing video software, such as Adobe After Effects, Adobe Premiere Pro, and Cinema 4D, to design and execute captivating motion graphic projects ● Incorporating typography, visual effects, and sound design to enhance the overall impact and engagement of motion graphic content ● Adapting and optimizing motion graphics for different screen sizes and resolutions to ensure seamless playback on various devices ● Demonstrating a keen eye for aesthetics and attention to detail, ensuring high-quality motion graphic deliverables that meet client requirements and exceed expectations ● Contributing to the creative process by bringing innovative ideas and creative solutions to the table, contributing to the overall success of the design team ● Managing multiple projects simultaneously, adhering to project timelines, and delivering projects on time and within budget ● Collaborating with clients and stakeholders to understand project goals, gather feedback, and incorporate revisions to achieve the desired creative vision ● Collaborating with the creative team, including graphic designers, video editors, and content creators, to conceptualize and storyboard motion graphic projects that align with brand guidelines and project objectives

		• Staying updated with industry trends and best practices, continuously refining skills, and exploring new techniques to push the boundaries of motion graphics design.
5.	Audio Specialist	• Operate audio recording equipment to capturing high-quality sound. • Set up microphones and other recording devices for different scenarios. • Edit and mix audio recordings to ensure optimal sound quality. • Remove background noise and imperfections from audio files. • Create and implement sound effects to enhance audiovisual content. • Design audio elements to evoke specific emotions or atmospheres. • Record and edit voiceovers for various projects. • Direct voiceover talent to achieve desired delivery and tone. • Handle post-production tasks, including Foley work and ADR (Automated Dialogue Replacement). • Ensure synchronization between audio and visual elements. • Compose, arrange, and produce music tracks for multimedia projects. • Select or create music that complements the mood and theme of the content. • Master final audio mixes for consistency and optimal playback. • Balance levels, equalize frequencies, and

		apply compression as needed. ● Restore and enhance audio quality for older or degraded recordings. ● Remove clicks, pops, and other artifacts from audio files. ● Maintain and troubleshoot audio recording and editing equipment. ● Ensure proper functioning of microphones, audio interfaces, and other hardware. ● Conduct on-location recordings for authenticity in sound. ● Capture ambient sounds and environmental audio for specific projects.
6.	Graphic Designer	● Brainstorm and conceptualize visual solutions based on project requirements. ● Translate ideas and concepts into visually appealing design concepts. ● Create graphic designs for various mediums, including digital and print. ● Develop an, illustrations, and other visual elements using graphic design software. ● Contribute to the development and maintenance of brand identity. ● Ensure consistency in design elements across various brand materials. ● Work collaboratively with cross-functional teams, including marketing, product, and

		development teams. ● Incorporate feedback and iterate on designs based on team input. ● Select and apply appropriate fonts and typography to enhance design aesthetics. ● Ensure readability and visual harmony through effective use of typography. ● Apply knowledge of color theory to create visually appealing and harmonious color schemes. ● Consider the psychological impact of colors in design. ● Design and arrange visual elements to create balanced and aesthetically ● Consider user experience and readability in the design. ● Edit and retouch images to enhance their visual impact. ● Ensure that images align with the overall design concept. ● Design materials for print, such as brochures, posters, and packaging. ● Ensure designs meet printing specifications and standards. ● Create digital assets for online platforms, including social media, websites, and mobile applications. ● Optimize designs for various screen sizes and resolutions. ● Design icons and symbols for use in digital interfaces and applications. ● Ensure clarity and consistency in iconography. ● Design visually compelling infographics to

		convey complex information. ● Use graphic elements to enhance data visualization. ● Stay informed about design trends, tools, and best practices. ● Continuously improve skills and adapt to evolving design standards.
7	UI/UX Designer	• Investigating user experience design requirements for our suite of digital assets. • Developing and conceptualizing a comprehensive UI/UX design strategy for the brand. • Producing high-quality UX design solutions through wireframes, visual and graphic designs, flow diagrams, storyboards, site maps, and prototypes. • Designing UI elements and tools such as navigation menus, search boxes, tabs, and widgets for our digital assets. • Testing UI elements such as CTAs, banners, page layouts, page designs, page flows, and target links for landing pages. • Collaborating with the marketing team, and internal and external designers to ensure the creation and delivery of tailored experiences for the digital user. • Providing advice and guidance on the implementation of UX research methodologies and testing activities in order to analyze and predict user behavior.

		• Adhering to style standards on typography and graphic design.

After identified job roles and duties by project manager done deep research about how to do donation campaign and the social media marketing campaign to promote little bud foundation.

6.2.1.1.3 Conduct entire research about child deprivation/ impact of deprivation/donation campaign

Research about child deprivation in SriLanka

The distressing consequences of undernutrition foreshadow a bleak future. Sri Lanka's inaugural examination of multidimensional child poverty exposes a disheartening reality. By evaluating factors such as education, health, standard of living, and child development, along with 12 corresponding indicators, it is evident that 42.2% of children aged from infancy to 5 years old are living in poverty.

Nearly half of Sri Lanka's children below 5 years in poverty and undernourished

Approximately half of Sri Lanka's children under the age of 5 are living in poverty, with around half of babies experiencing undernourishment, reflecting the impact of economic challenges on the country's most vulnerable population. According to Sri Lanka's first study of multidimensional child poverty, which considers education, health, standard of living, and child development across 12 indicators, 42.2% of children aged from infancy to 5 years are in poverty.

Key findings from the study include the lack of safe drinking water for 32.9% of children, 24.4% living at least 15 minutes away from a bus stop or 30 minutes away from a primary or secondary school, and 16.4% of 4-year-olds being deprived of early childhood development. The report, titled 'Sri Lanka's Multidimensional Poverty Index 2019 Results: National and Child Analyses,' was made possible by UNICEF, the Oxford Poverty and Human Development Initiative (OPHI), the European Union, and the Department of Census and Statistics.

The study also reveals that one in six Sri Lankans, or 3.53 million individuals, live in poverty, with seniors being among the most affected. The incidence of multidimensional poverty is 17.9% among seniors and 16.9% among 5-17 year-olds. Stunting in children due to chronic undernutrition is a

concerning issue, and the economic crisis has exacerbated the situation, with a notable number of children requiring treatment for severe wasting.

The study emphasizes the urgent need for political leaders to address the lack of access to health facilities, schools, clean cooking fuels, and safe drinking water. It further reveals that poverty is more pronounced in certain provinces, with over 80% of individuals in those areas classified as poor.

The multidimensional poverty indices developed by UNICEF, including the child Multidimensional Poverty Index (child MPI), provide a comprehensive understanding of poverty, undernutrition, and early childhood development. The findings underscore the critical importance of addressing these multifaceted challenges to ensure the well-being of children in Sri Lanka. (Bandara, 2023)

Child Poverty in Sri Lanka

Child poverty encompasses a diverse set of challenges that affect various aspects of children's capabilities, well-being, and future prospects. This inclusive perspective acknowledges that children are unique individuals, distinct from being mere extensions of households or families. It recognizes that their encounters with poverty and well-being differ significantly from those of adults. This article aims to shed light on the issue of child poverty in Sri Lanka, relying on insights derived from a desk review conducted by the Centre for Poverty Analysis. The multidimensional nature of child poverty is emphasized, emphasizing the need to consider a range of factors that impact children's lives beyond just economic indicators. (Cader, 2009)

Deprivation, Exclusion and Vulnerability) (DEV) Framework on Child Poverty

Child poverty is now widely acknowledged as a multidimensional issue, stemming from a variety of factors encompassing both income and non-income aspects. Researchers utilize the DEV Framework for a comprehensive analysis, aiming to better understand how children experience and are affected by poverty. (Cader, 2009)

The DEV Framework consists of three interconnected dimensions: Deprivation, Exclusion, and Vulnerability. This approach moves beyond simplistic definitions, recognizing that children can be subject to varying intensities of different dimensions simultaneously. Deprivation, the 'basic needs'

dimension, involves a lack of essential resources and services crucial to children's well-being, such as food, safe water, education, and health. (Cader, 2009)

Exclusion incorporates the systems and context contributing to children being deprived not only of basic needs but also of emotional and social support. It highlights the significance of familial and social relationships, emphasizing that children may feel excluded due to factors like social status, group membership, economic status, and cultural bias. (Cader, 2009)

Vulnerability, the third dimension, underscores the dynamics of poverty, acknowledging how children are susceptible to various threats based on factors like location, ethnicity, social status, age, and gender. It also considers children's ability to cope with different dimensions of poverty, reflecting on their resilience and capacity to bounce back. This resilience depends on the available resources, the context, and the individual capabilities of children. (Cader, 2009)

This multidimensional approach to child poverty recognizes the complexity of the issue and emphasizes the need to consider a range of interconnected factors to truly understand the experiences and impacts on children. (Cader, 2009)

The following sections describe child poverty in Sri Lanka in different dimensions of the DEV Framework, using evidence from past secondary quantitative and qualitative studies.

6.2.1.1.4 Define problem and figure out Solutions and documentation.

Health problem

A child’s health is key to their development in both intellectual and physical terms, and poor health can impair a child’s ability to fulfil their capabilities. The characteristics that can impact on a child’s health include parental income, education and health levels, economic or social exclusion from key services or infrastructure, and geographical location (spatial disadvantage and vulnerability). A child who is suffering from ill health is not able to develop to their maximum capacity, and, is in turn, vulnerable to perpetuating the same disadvantages in the next generation. Despite Sri Lanka’s positive indicators, malnutrition in children, leading to low weight and stunting, is still a significant problem, and safe drinking water and adequate sanitation are still not accessible to all children. Child malnutrition continues to be a major problem in Sri Lanka. Between 1/3 and 1/4 of children under the age of five are underweight, and one in ten suffers from chronic or acute malnutrition. Approximately 72,000 babies (19% of live births) born every year are moderately to severely malnourished; the median birth weight

of Sri Lankan children is approximately 2.8kg, well below the reference median value of 3.2kg of Medical Research Institute in 1998) (de Silva, 2000). A study by Gunewardena (2003) shows that lack off access to safe drinking water and adequate sanitation affects children with lower nutrition levels more than others; 40% of underweight children did not have access to safe drinking water and nearly 42% had access to only a pit latrine and nearly 45% had bucket/no toilet. In comparison to other developing countries, Sri Lanka has much lower infant mortality and maternal mortality rates. The infant mortality rate has declined from 22% in 1985- 1990 to 13.5% in the period 1995-2000. Infant mortality is highest in the estate sector 47.5 %(based on fewer than 500 cases) compared to 15% in urban and 17.5% in rural areas (excluding the North and East) (Department of Census and Statistics (DCS), 2000). The three principal causes of infant mortality remain respiratory illness, diarrhoeal infection and accidental death (DCS, 2002). The reasons for mortality rates can be linked 3 to mother's health and nutritional levels during pregnancy and her access to quality prenatal care and post-natal care. The socio-economic background of parents, especially the educational attainment of mothers, has also been found to affect infant and child mortality to a great extent. Living environment and accessibility to primary health care facilities are also key factors influencing mortality levels. The mother's age is also an important factor; children born to women under the age of 20 or over the age of 35 years of age are at a higher risk of dying within the first month of life (DCS, 2000). Diarrhoeal disease is common among children,and is one of the main causes of poor growth and development of young children. This is often caused by poor sanitary conditions and access to unsafe drinking water. According to the 2000 Demographic and Health Survey (DHS) (DCS, 2002a0) 3 5.5% for children under five in Colombo district, 5% in other urban areas, 7% in rural and 6.5% in estates suffered from a diarrhoea episode (in reference to a two week period) (DCS, 2000). Immunisation levels in different parts of the country, in comparison to diarrhoeal disease prevalence, are more positive. In urban areas 87% of children had health cards and 82% of these had full immunisation coverage; in rural areas 87.5% of children had health cards and of these 81.5% had full coverage; in the estate sector, 66.5% had health cards with 71.5% having full immunisation coverage (DCS, 2000). The number of children with disability increases with age, indicating that most disabilities either develop later in life or are a result of injury or illness. The most common type of disability was in the legs, followed by hearing/speaking disabilities and mental disability (DCS, 2001).

(Cader, 2009)

Education

Sri Lanka's free education policy has led to some of the highest literacy and enrolment rates in the South-Asian region. Despite high initial enrolment rates, around 18% of children fail to complete Grade 9, demonstrating relatively high levels of drop out (World Bank, 2005).

United Nations Children's Fund (UNICEF) (2001) estimated that, in Sri Lanka, between 80,000-100,000 children between 5-14 years do not attend school. The children who fail to complete schooling are mainly those from poor and marginalised homes in poor geographical areas, including the rural sector, conflict-affected areas, and the estate sector. Despite the provision of free education, poor households may not be able to pay for the extra essentials for school, such as, exercise books, bus fares, sufficient meals, etc. Additionally, vulnerable groups include children who suffer from a disability, and children left behind by migrant mothers where care givers may not be managing the household income well enough to include adequate access to education. Education and learning levels are lowest in the conflict-affected areas, which have been seriously affected by damage to the infrastructure as well as lack of skilled teachers. (Cader, 2009)

There are also issues of quality of education offer those who do attend. Although 90% of children finish primary school, less than 20% reach mastery in numeracy, literacy, and life skills (National Education Commission (NEC), 1995). Teaching standards are low in many rural areas, with the government finding it difficult to recruit trained teachers (Ministry of Education, 2007). (Cader, 2009)

Children Affected by Armed Conflict

Children have been both directly and indirectly affected by the conflict with destruction to their support networks and threats to their familiar environment. Children have lost their childhood as a result of being faced with fears, worries, frustrations and insecurities (Amarakoon, 2002). A conflict situation destroys children's support structures, such as, family and community, and changes the manner in which children perceive such stability. In trying to deal with the way children experience conflict and its resulting violence, Mathieu (2006) stresses that children are not a homogenous group and their vulnerabilities in emergencies will be a function of many factors; their age, whether they live in urban or rural settings, their ethnicity or tribe and whether they are boys or girls. Accordingly, their vulnerability will also depend on the traditional role in society, whether that role and position has become worse or better as a result of the disaster. Furthermore, the conflict experience can affect children at all phases of their lifecycle; impacting on childhood, youth and adulthood. The issue of child soldiers in Sri Lanka is critical considering the significant numbers of children who have been affected and killed as a result of underage recruitment. The poor in conflict regions have been more vulnerable to recruitment. In post-conflict conditions, greater efforts need to go into understanding and addressing

the ‘push’ factors for children (and young men in particular) joining armed groups by offering them other choices to improve their living conditions. (Cader, 2009)

Child Labour

Poverty makes children vulnerable to entering the labour force and the informal nature of the work that children engage in make it easier for them to be exploited. On the other hand, children are keen to contribute to their household income situation, and sometimes, display willingness to undertake such work. These tasks are economically unrewarding, unstable and these children are likely therefore to remain in poverty. Child labourers suffer multiple deprivations; they are overworked and have little leisure, denied education, faced with bad working conditions, subjected to cruel treatment by employers and to sexual harassment and are under paid. Often children are not provided with the stimulation for proper physical and mental development, and full-time child labour in particular affects the health and personal development of the child (Rajendran, 2004). Sri Lanka is a signatory to a number of international conventions which address child labour, including the Convention on the Rights of the Child (CRC), the Optional Protocol 5 on Children in Armed Conflict and the ILO Convention on Minimum Age for Admission to Employment. As a result, national legislature prohibits children below 14 years from engaging in any type of employment, but, allows children between the ages of 14-16 to engage in work under certain conditions that ensure that the development needs of the children are met (Kannangara, De Silva and Parndigamage, 2003). Precise and up-to-date statistics on children engaged in labour work are limited. Past data from the DCS (1999) revealed that 21% of Sri Lankan children between the ages 5 and 17 were engaged in some form of economic activity. Sixty percent of all child labourers work in the agricultural sector in Sri Lanka and a majority of child domestic workers come from rural areas, plantations and city slums (Kannangara, De Silva and Parndigamage, 2003). (Cader, 2009)

Child Abuse

Child abuse is a wide term which covers a range of ‘deliberate’ actions which impact negatively on a child’s wellbeing. These actions can range from verbal bullying at school, in the community or at home, to commercial sexual exploitation and trafficking. Some types of abuse, commercial exploitation for example, are more prevalent in poorer communities, but children from a range of different socio-economic environments are vulnerable to abuse. Child abuse is acknowledged to be a significant problem in Sri Lanka, despite the fact that much evidence remains anecdotal. The statistics are based on reported incidents, and since many incidents go unreported, this data can only be seen as indicative. Abuse is closely associated with poorer socio-economic backgrounds and deprivation of education and

adequate care. Vulnerability is exacerbated for children living in certain geographical areas or sectors, those living in dysfunctional or broken families, and along gendered lines. However, aside from more obvious socio-economic factors, there is also an insidious problem in Sri Lanka which increases the vulnerability of children; a culture of acceptance of both sexual and violent abuse, and the fact that in some communities (particularly in coastal areas) prostitution has even become 'institutionalised' with limited stigma or shame attached to it (Dias, 1999). (Cader, 2009)

Institutional Care

The children who are housed in institutions: victims of abuse, child labour, extreme poverty, family break-up or death, are usually the most vulnerable. The available literature would suggest that their subsequent experience and placement in most institutions does little to mitigate that vulnerability, instead exposing them to more deprivation, exclusion and vulnerability. Save the Children commissioned a study on institutional care for children (Bilson & Cox 2005) which shows a higher number of children in care and a higher number of institutions than recorded. Children caught within the juvenile justice system are often institutionalised before trial even if they are victims, and may be held in remand homes or prisons. Children under the age of 18 who are victims of abuse, awaiting trial or offenders all enter the juvenile 6 justice system and are invariably institutionalised. Victims of abuse are placed in remand institutions which suffer from a severe lack of qualified staff to deal with the needs and concerns of the children. The inadequate housing facilities mean that different types of offenders and victims are often housed together (Coomaraswamy and Satkunanathan, 2006). (Cader, 2009)

Those details provides an overview of child poverty issues in Sri Lanka within varied themes. In relation to health Sri Lanka fares well in its health services and the health of the population, but deprivation is a key factor in most ill health; households deprived of adequate living standards, education and access to key infrastructure and markets are more likely to suffer ill health. Child malnutrition continues to be a major problem in Sri Lanka. A history of commitment to education in Sri Lanka has led to good literacy levels and good overall availability of basic schooling available for children throughout most areas of the country. However, the lack of investment in the sector and a failure to modernise the curriculum in recent years has taken its toll. A large body of literature exists on the impacts of the conflict on children in Sri Lanka, with a whole generation affected by insecurity, violence, physical and emotional trauma and material deprivation. However, some of the most interesting research indicates the resilience that children can demonstrate in face of seemingly insurmountable difficulties. Child labourers suffer multiple deprivations; they are overworked, have little leisure, are denied education, suffered by bad

working conditions, subjected to cruel treatment by employers and sexual harassment and under paid. (Cader, 2009).

By understanding all the problems and things faced by children idea hub solutions able to find littlebud foundation by deep research for foundation who helped to the children who need essentials. For that as a multimedia solution company IdeaHub solutions going to promote and market littlebud foundation trough their multimedia solutions such as website, promotion campaign, video and audio commercials.

Littlebud Foundation

Figure 5- Littlebud foundation logo:Source by designer

Introduction to Littlebud Foundation

In the face of the socio-economic challenges gripping Sri Lanka, particularly affecting its most vulnerable demographic children, Littlebud Foundation emerges as a beacon of hope and support. Committed to addressing the pressing needs of children amidst economic adversity, Littlebud Foundation is dedicated to providing essential resources for their well-being and education.

Mission

Littlebud Foundation is on a mission to alleviate the hardships faced by children in Sri Lanka by ensuring access to fundamental necessities such as nutrition, education, healthcare, and shelter. We believe that every child deserves a chance to grow, learn, and thrive, regardless of economic challenges.

Key Challenges

1. Malnutrition: Over 25% of Sri Lanka's children face malnutrition, hindering their physical and cognitive growth. LittleBud Foundation aims to combat this issue by providing access to proper nutrition.

2. Healthcare Access; Approximately 20% of children lack access to essential healthcare services. Our foundation endeavors to bridge this gap, ensuring that children receive the necessary medical attention and treatments.

3.Education Barriers The :economic downturn has led to increased unemployment rates, affecting around 15% of children who cannot attend school regularly due to financial constraints. LittleBud Foundation seeks to break down barriers to education by providing necessary resources.

‘Hope for Tomorrow' Campaign

LittleBud Foundation launches the 'Hope for Tomorrow' multimedia campaigna rallying call to address the urgent needs of Sri Lanka's children. This campaign aims to educate, engage, and inspire individuals, organizations, and policymakers to invest actively in initiatives that enhance the lives of vulnerable children.

The Challenge

The challenge is to create a compelling multimedia solution that sheds light on the plight of children in Sri Lanka's communities facing economic adversity. 'Hope for Tomorrow' seeks to mobilize widespread support, encouraging collective action to secure essential needs and provide a brighter future for these children.

How people can support

1.Donations

Evryones financial contributions can make a direct impact on the lives of these children. Donate to LittleBud Foundation and be a part of the positive change.

2.Volunteer Opportunities

LittleBud welcomes passionate individuals to join as volunteers. Your time and skills can contribute to the success of our initiatives.

3.Spread Awareness

Share the 'Hope for Tomorrow' campaign on social media and in your community. Help us raise awareness about the challenges faced by Sri Lanka's children and the solutions LittleBud Foundation is providing.Together, with idea hub build a brighter tomorrow for the children of Sri Lanka. LittleBud Foundation nurturing hope, one child at a time.

6.2.1.5 Multimedia Solutions and deliverables

The proposed solutions for introducing and promoting Littlbud foundation in Sri Lanka take a multifaceted approach. An extensive awareness campaign, utilizing social media, workshops, and detailed informational materials, will emphasize the fertilizer's benefits. The website will provide in-depth information, supported by videos and radio advertisements highlighting the advantages of using wormy compost liquid fertilizer. Stakeholder engagement will involve collaboration with distributors and cooperatives to build credibility and establish distribution networks, featuring product demonstrations for accessibility. By installing donation system in kiosk at overall supermarkets, Airports and famous shopping cater can donations target high end society.

By promotion littlebud foundation through multimedia solution inviting and make motivate individuals, organizations, and policymakers, NGOs to support and donate to help vulnerable children who faced so many problems in Sri Lanka.

Planned deliverables from ideahub solutions pvt ltd.

- **Working website**
- **UI design for kiosk**
- **5 Outdoor Posters and 2 bill bords designs.**
- **15 social media post,1Giff/ A3 Poster/DL pamphlet/ 3 Brand Product/3 sign board**
- **2 Audio advertisement**
- **Video commercial**
- **Infographic animation Video**

Once all finalized derailable project plan was done by project manage like shown below.

6.2.1.1.5 Project Plan

IdeaHub Solutions

PROJECT PLAN

PROJECT NAME	'Hope for Tomorrow' Multimedia Campaign	PROJECT MANAGER	Rajika Rathnayake
PROJECT LOCATION	Colombo	PROJECT BY	IdeaHub Solutions Pvt Ltd.
PROJECT SCOPE	Planning, Designing, Development,Prmoting		
COMPANY	IdeaHub solutions Pvt Ltd		
CONTACT NAME	Rajika Rathnayake		
MAILING ADDRESS	No 58, Davidson Road, Colombo 04		
EMAIL	infoideahub@gmail.com	PHONE	+94 71 518 6327
START DATE	01/08/2024	END DATE	01/27/2024

01. PROJECT IDEA

The 'Hope for Tomorrow' multimedia campaign addresses the critical issue of child deprivation in Sri Lanka, focusing on socio-economic challenges and their impact on vulnerable children. The campaign, led by the Little Bud Foundation, aims to raise awareness, mobilize support, and generate resources for these children through various multimedia platforms.By this foundation targets to raise fiunds and help to vulnerable children in Sri Lanka to improve their basic essentials. By promotion Little bud foundation via website,Video and audio commercials plan to improve the way donate.

01. PROJECT OVERVIEW

01.1.Background

In the midst of socio-economic challenges gripping Sri Lanka, the "Hope for Tomorrow" campaign emerges as a beacon of change, casting its focus on the most vulnerable demographic – children grappling with the harsh realities of deprivation. The economic downturn has exacerbated the struggles families face in meeting fundamental needs like nutrition, education, healthcare, and housing, posing a serious threat to the well-being of these young lives..By this foundation aims to raise funds and help to vulnerable children in Sri Lanka to improve their basic essentials. By promotion Little bud foundation via website,Video and audio commercials plan to improve the way donate.

01.2.Project Problem

The economic downturn in Sri Lanka has led to serious consequences for vulnerable children, with families struggling to provide basic needs such as food, education, healthcare, and housing. Child poverty rates have risen, with over 25% of children facing malnutrition and 20% lacking access to essential health services. Unemployment has increased, causing financial constraints that prevent around 15% of children from attending school regularly. These challenges disproportionately affect vulnerable children and hinder their access to quality education, healthcare, nutrition, and safe living conditions. Immediate collective action and support are needed to provide resources and opportunities for these children and pave the way for a better future. The "Hope for Tomorrow" campaign aims to raise awareness and generate resources to meet the urgent needs of Sri Lanka's children.

Figure 6- Project Plan by Project Manager

01.3.Proposed Solution

The 'Hope for Tomorrow' campaign is a comprehensive solution to address child deprivation in Sri Lanka, with a focus on promoting the Little Bud Foundation. The strategy includes a user-friendly website, social media campaign, emotionally resonant video content, branded promotional products, and audio advertisements. This multifaceted approach aims to inspire collective action, raise awareness, and generate resources for vulnerable children in Sri Lanka. The goal is to transform lives and empower communities to address the urgent needs of underprivileged children.

01.4.Project Goal

Promoting wormy compost liquid fertilizerin Sri Lanka confronts challenges, including limited awareness, market skepticism, financial barriers, and the absence of supportive policies. These obstacles hinder adoption, especially among farmers accustomed to traditional methods, slowing overall progress. Overcoming these challenges is essential for successfully integrating organic liquid fertilizer and advancing sustainable agriculture in Sri Lanka

01.5.Project Scope

The 'Hope for Tomorrow' campaign is a multimedia effort to address child deprivation in Sri Lanka, with a focus on the Little Bud Foundation. The project includes developing a website, implementing a social media campaign, creating emotional video and animation content, producing branded promotional products, creating radio commercials, and engaging with the public and potential investors. The initiative's effectiveness will be monitored and evaluated to assess its impact on raising awareness, mobilizing support, and generating resources for the foundation. The comprehensive approach aims to empower communities to address the urgent needs of Sri Lanka's children amidst economic adversity.

01.6.Aim

Aim of this project is fundraising through the multimedia campaign for the support to the urgent needs of Sri Lanka's children who deprivation of essential needs among children.

01.7.Objectives

- To create a dynamic website for promote inspiring people to donate.
- To Create and optimize a user-friendly online platform for accepting donations.
- To launch social media campaign
- To Create emotionally compelling multimedia content, including videos, animations, audio commercials effectively communicate the urgency of supporting Sri Lanka's children.
- To sell brand products through online platforms and collect funds.

01.8.Target Audiance

The target audience for the 'Hope for Tomorrow' multimedia campaign encompasses the general public, local and international NGOs, government agencies, and potential investors

Deliverables

- Working website
- UI design for kiosk
- 5 Outdoor Posters and 2 bill bords designs.
- 15 social media post,1Giff/ A3 Poster/DL pamphlet/ 3 Brand Product/3 sign board
- 2 Audio advertisement
- Video commercial
- 1 infographic animation

ANALYSIS

02.Analyze the needs for 'Hope for Tomorrow' Multimedia Campaign

2.1.Budget Planning	
2.2.Project planning	
	Softwares-Adobe Illustrator, Miro, word, Excell
2.3.Resource planning	
	Team, Computers, speakers,Laptops, Locations, Cameras and go pro 12,Iphones
	Drawing pad
2.4.Time managements	
2.5. UI/UX Designing	User Flows, mockups, Sketches, Wireframes, UI designs
	Figma, Miro, Adobe Illustrator, Adobe Photoshop
2.5.Social Media Campaign -	Informative posts
	Infographics
	Location by photoshoot
	Short Videos
	Softwares-Adobe illustrator, Adboe photoshop,Miro, Figma,Images
2.6.Video Production -	High-quality visuals
	Location by photoshoot
	Animation
	Narration in the promotional videos
	Adobe After effects
	Adobe premier pro
	Iphone 11 and Go pro camera, I7 Laptop,Imac
2.7.Website Development-	User-friendly interface, Location by photoshoot,Figma,visual studio code
	Photoshop,HTML5 Boostrapt 5.3, Javascript
2.8.Radio Commercial -	Iphone,Script,Voice Talent and Production.
	Softwares- Band lab, Adobe indesign,Word
2.9-Informational Materials -	Infographic,Posters,Brouchers, Location by photoshoot
	Psocial media post, Giff ,A3 Poster, DL pamphlet ,Brand Produc
	sign board
2.10-IAnimation Video -	Chaters Drawing, Animations, Typography
	Procreate , Pad Air 5

03.Analyze the Cost for 'Hope for Tomorrow' Multimedia Campaign

'Hope for Tomorrow' Multimedia Campaign Project Cost Plan

	Per person cost (Rs.)	No of users	Cost per month (Rs.)
Salaries			
Project Manager	500,000		500,000
Web Developer	400,000		400,000

04.Content Analysis for 'Hope for Tomorrow' Multimedia Campaign

4.1.Website Development

- The website serves as the central hub, providing information and interaction opportunities.
- Content includes statistics, case studies, and real-life stories to create an emotional connection.
- Clear steps for involvement, donation options, and volunteer opportunities are prominently featured.

4.2.Social Media Campaign

- Engaging content on various social media platforms to reach a diverse audience.
- Visuals, infographics, and regular updates convey the urgency of addressing child deprivation
- Encourages user-generated content and sharing to amplify the campaign's reach.

4.3.Video Content

- Produce engaging video content that explains the manufacturing process, benefits, and real-world applications of Wormy Compost Liquid Fertilizer.
- Create tutorial videos demonstrating the correct usage and the positive impact on soil health.
- Develop a series of short, visually appealing videos for social media platforms

4.4.Animation:

- Compelling videos and animations tell the story of children facing deprivation.
- Highlights the immediate and long-term effects on health, education, and overall well-being.
- Showcases successful community initiatives and the positive impact of support.

4.4.Radio Commercial:

- Radio commercials leverage reputable channels to promote the cause.
- Encourages donations and emphasizes the role individuals can play in making a difference.
- Conveys a message of hope and the transformative power of collective action.

4.5.Klosk UI Designing

- Identify target audiance and create userfriendly user flow
- Low fedility wireframes and User interface
- Working prototype fro understaning user to how to navigate

05.Market Analysis for 'Hope for Tomorrow' Multimedia Campaign

5.1.Target Audience

- The primary target audience includes the general public, local and international NGOs, government agencies, and potential investors.
- Understanding the demographics, behaviors, and preferences of these segments is crucial for effective engagement..

5.2.Donor Landscape:

- Analyzing the landscape of potential donors involves identifying individuals, organizations, and philanthropic entities with an interest in supporting causes related to child well-being and development

5.3.Media Consumption Habits:

- Understanding how the target audience consumes media, including preferences for online platforms, social media usage, and receptiveness to multimedia content.
- Analyzing trends in content consumption to tailor the campaign effectively.

5.4.Competitive Landscape

- SInvestigating existing multimedia campaigns and initiatives addressing similar issues in Sri Lanka or globally
- Identifying potential collaborators, competitors, and partners in the field to enhance the campaign's reach and impact.

5.5.Digital Platforms

- Assessing the popularity and effectiveness of various digital platforms in Sri Lanka.
- Identifying which platforms are most suitable for conveying the campaign message and engaging the target audience.

5.6.Social Media Trends:

- Researching current trends on social media platforms, including content formats, engagement strategies, and successful campaigns.
- Utilizing insights to optimize the 'Hope for Tomorrow' social media campaign

5.7.Market Needs and Gaps

- Identifying gaps in existing initiatives and understanding the specific needs of the Sri Lankan community in addressing child deprivation.
- Tailoring the campaign to fill these gaps and meet the unique requirements of the local context.

5.8.Consumer Behavior

- Analyzing how individuals respond to multimedia content focused on social issues and charitable causes.
- Leveraging psychological and behavioral insights to enhance the impact of the campaign.

5.9.Regulatory Environment:

- Understanding any legal or regulatory considerations related to fundraising and charitable activities in Sri Lanka.
- Ensuring compliance with local laws and regulations governing philanthropic efforts.

5.10.Economic Factors

- Considering the economic climate in Sri Lanka and its potential impact on fundraising efforts.
- Adapting the campaign strategy to resonate with the economic context and sensitivities of the target audience..

06.Analyze the technologies for 'Hope for Tomorrow' Multimedia Campaign

6.1.Website Development

HTML (Hypertext Markup Language)

CSS (Cascading Style Sheets)

javascript

boostrap frame work

Visual Studio Code: Code editor

web server- git hub

6.2.Vedio Commercial

Instagram

You Tube

Softwares - Coreldraw,Adobe Photoshop 2024

Adobe illustrator

6.4.Audio Commercial

Band lab

Adobe indesign

6.4.2D and motion graphics designer

Procreate

Hardware :iPad Air 5

6.4.Audio Commercial

Kiosk- Digital Flatfoam

Softwares - Figma, Miro

Adobe Photoshop 2024

Adobe illustrator 2024

07.Delivery Medium Analysis

- Website
- UI/UX Design for kiosk interface
- Social media flatfoams -(Facebook, Instagram)
- Video, Animatiom - You Tube, Webesite
- Audio Platforms -Radio
- Animation Video

08.EVALUATION

Once all the analysing and evaluation sessions, if identified, the project goes the unprofitable way it is time to bail out.If not can proceed..

PRETESTING

09.Define Project Goals for 'Hope for Tomorrow' Multimedia Campaign

The 'Hope for Tomorrow' Multimedia Campaign is driven by a set of comprehensive goals aimed at tackling the urgent challenges faced by children in Sri Lanka. The primary objective is to raise awareness about the widespread issue of child deprivation caused by economic adversities. By disseminating key statistics and highlighting multifaceted challenges, the campaign endeavors to evoke empathy and motivate individuals, organizations, and policy-makers to take immediate and sustained action.

The campaign also seeks to address the root causes of child deprivation, emphasizing economic instability and the lack of access to essential services like education, healthcare, nutrition, and shelter. Through advocacy for systemic changes and policy interventions, the initiative aims to contribute to long-term solutions

The campaign also seeks to address the root causes of child deprivation, emphasizing economic instability and the lack of access to essential services like education, healthcare, nutrition, and shelter. Through advocacy for systemic changes and policy interventions, the initiative aims to contribute to long-term solutions.

One crucial aspect of the campaign is the showcasing of successful community-driven initiatives that have effectively mitigated child deprivation. By emphasizing positive impacts and lessons learned, the campaign inspires similar initiatives and collaborations, fostering a sense of collective responsibility.

To facilitate engagement and support, a dynamic and user-friendly website will be developed, serving as the central hub for information, interaction, and donations. The campaign encourages involvement by providing clear steps, diverse donation options, and volunteer opportunities.

The promotion of the Little Bud Foundation is integral to the campaign's success. By portraying the foundation as a reliable entity dedicated to collecting donations and addressing essential needs among deprived children, the campaign aims to create a positive and trustworthy brand image.

Fundraising efforts are pivotal to generating resources for vulnerable children. The campaign will mobilize support through various channels, leveraging multimedia platforms to maximize fundraising and secure resources for immediate interventions.

To maximize reach and impact, the campaign will utilize various multimedia platforms, tailoring content for different audiences. This includes the website, social media, videos, animations, and audio commercials, ensuring a diverse audience is reached and engaged.

Encouraging collaborations is another key goal, as the campaign seeks to foster partnerships with local and international NGOs, government agencies, and potential investors. These collaborations are envisioned to enhance the campaign's reach and effectiveness.

The project will implement robust mechanisms for tracking and measuring success, regularly evaluating key performance indicators to ensure that goals are being met. This adaptive approach allows for adjustments to strategies, ensuring the campaign remains effective in addressing the urgent needs of Sri Lanka's children and contributing to the overall well-being and development of the community.

10.Define skill set needl for promoting worm compost liquid fertilizer

Key roles

Project Manager and UI/UX Designer
Web Developer
Graphic Designer
Video creator
Audio Creator
2D and motion graphics designer

Skills and responsibilities

10.1.Project Manager

Plan and Develop the Project Idea.
Define Project Problem, solutions aim and objectives
Make cordination with a team
Monitor Project Progress and Set Deadlines.
Solve Issues That Arise.
Manage the budget.
Ensure Stakeholder Satisfaction.
Evaluate Project Performance.
Delegating work effectively
Managing Time.

10.2.Web Developer

Designing user interfaces and navigation menus
Writing and reviewing code for sites, typically HTML, XML, or JavaScript
ntegrating multimedia content onto a site
Testing web applications
Troubleshooting problems with performance or user experience
Collaborating with designers, developers, and stakeholders.

10.3.Graphic Designer

Study design briefs and determine requirements
Conceptualize visuals based on requirements
Prepare rough drafts and present ideas
Develop illustrations, logos and other designs using software or by hand
Use the appropriate colors and layouts for each graphic
Test graphics across various media
Amend designs after feedback
Ensure final graphics and layouts are visually appealing and on-brand

10.4.Video creator

Design, develop, and test video presentations to support sales, marketing, and business development efforts
Research market demographics, competitive offerings, and industry trends to develop innovative approaches for cross selling and upselling
Create video ads, explainer videos, and product videos that appeal to target audiences
Create and update video channels on YouTube, Vimeo, and other video platforms

10.5.Audio creator

Recording and create sounds
Equalizing prerecorded audio
Keeping records of work
Using recording equipment and
Creating music pieces
Setting up and tearing down equipment
Monitoring equipment performance
Sound mixing Set up sound systems
Edit Sound clips

10.5.2D and motion graphics designer

Read scripts and storylines to understand animation requirements
Prepare presentations with raw designs to customers
Develop storyboards for the initial stages of production
Create models, drawings and illustrations by hand or electronically
Join images with background graphics and special effects
Ensure synchronization of frames and audio
Participate in editing process
Direct the work of animation assistants
Collaborate with production crew (designers, directors etc.)

10.6.UI/UX Designer

Investigating user experience design requirements for our suite of digital assets.
Developing and conceptualizing a comprehensive UI/UX design strategy for the brand.
Producing high-quality UX design solutions through wireframes, visual and graphic designs, flow diagrams, storyboards, site maps, and prototypes.
Designing UI elements
Testing UI elements
Collaborating with the team

12.EVALUATION

Once all the analysing and evaluation sessions, if identified, the project goes the unprofitable way it is time to bail out.If not can proceed.If any chnages revisions

PROTOTYPE DEVELOPMENT

13.Build screen mockups

13.1 Designing screen mockups for websit and kiosk ui

Designing home page mockup
Designing product page mockup
Designing our services page mockup
Designing donations page mockup
Designing about us and contact us
Designing Main dashbord mockup
Designing donate categories page mockup
Designing donating page mockup
Designing select amount page mockup
Designing final stage mockup

14.Build human interfaces

14.1 Designing High fedility UI for websit and kiosk

Designing home page
Designing product page
Designing our services page
Designing donations page
Designing about us and contact us pages
Designing Main dashbord
Designing donate categories page
Designing donating page
Designing select amount page
Designing final stage

15.Develop concept ,Story, Script

15.1 Audio Advertising

Concept Building for Audio Advertising
Build a story for a radio advertisement
Create a script

15.2 Video and animation Creation

Concept Building for video creation
Build a story for a radio advertisement
Create an infographic
Create flow chatrs

16.Test prototypes

16.1 Test and review the website all page wireframes
16.2.Test and review Social media campaign sketches
16.3.test and review Audio advertisement concept, script
16.4.Test and review video creations concept
16.5. Test and review video animation

17.EVALUATION

Once all the analysing and evaluation sessions, if identified, the project goes the unprofitable way it is time to bail out.If not can proceed.If any chnages revisions.

ALPHA DEVELOPMENT

18.Finalized the story and the scripts

18.1 Reviewing and finalizing scripts for audio advertisement

18.2.Reviewing and finalizing ideas and the flow charts for video advertising

19.Produse Graphic Arts

19.1 Designin graphics for promotion campaign

- Designing logo for the little bud foundation
- Designing brand guide
- Designing infographics for a social media campaign
- Designing images for a social media campaign
- Designing social media posts
- Designing Posters
- Designing Brochures
- Designing flyers
- Desiogning products images

20.Produce Video

20.1 Creating Video

- Research
- Photoshoot
- Pre vishualization
- Fixing
- Asserts gathering and Creating Video

21.Produce Audio

21.1 Creating radio commercial

- Voiceover Preparation
- Voiceover Recording
- Sound Effects and Music
- Editing and Mixing
- Finalize the voiceover
- Develop a plan for distributing the radio commercial

22.Slove technical problems under each solution

21.1 Slove technical problems under website

21.2 Slove technical problems under Socialmedia campaign

21.3 Slove technical problems under video

21.4 Slove technical problems under radio commercia

21.5 Slove technical problems under video animation

23. Test working prototype

23.1 Testing working website by each pages using real details and the validations
23.2 Testing user interface and navigation fro kiosk
23.3. Testing all the social media campaign graphic materials using usability.
23.4. Testing Radio commercial
23.5. Testing Video and animation video
23.6 Repot bugs and assign to each members

BETA DEVELOPMENT

24. Bug Fixing

24.1 Repot bugs and assign to each members

24. Final Testing

23.1 Testing working website by each pages using real details and the validations
23.2 Testing and review user interface for kiosk and testing flow and the navigations
23.2. Testing all the social media campaign graphic materials using usability.
23.3. Testing Radio commercial
23.4 Testing Video and animation video
23.5 Repot bugs and assign to each members

DELIVERY

24. Final prodcudts demo

25. Ready to launch

25.1 Keep ready to host website and user interfaces for kiosk to implemet
25.2. Keep ready to launch a social media campaign using designs
25.3. Keep ready to publish radio commercial
25.4 Keep ready to publish videos and animations

26. Host and Launch

27. End of the project and Celebrating

6.2.1.1.7. Project Task list by Excel

For better usability and productivity project manager listed and share excel sheet by adding task list to members. People can see their task easily and if issues or blockers people can report to PM by it

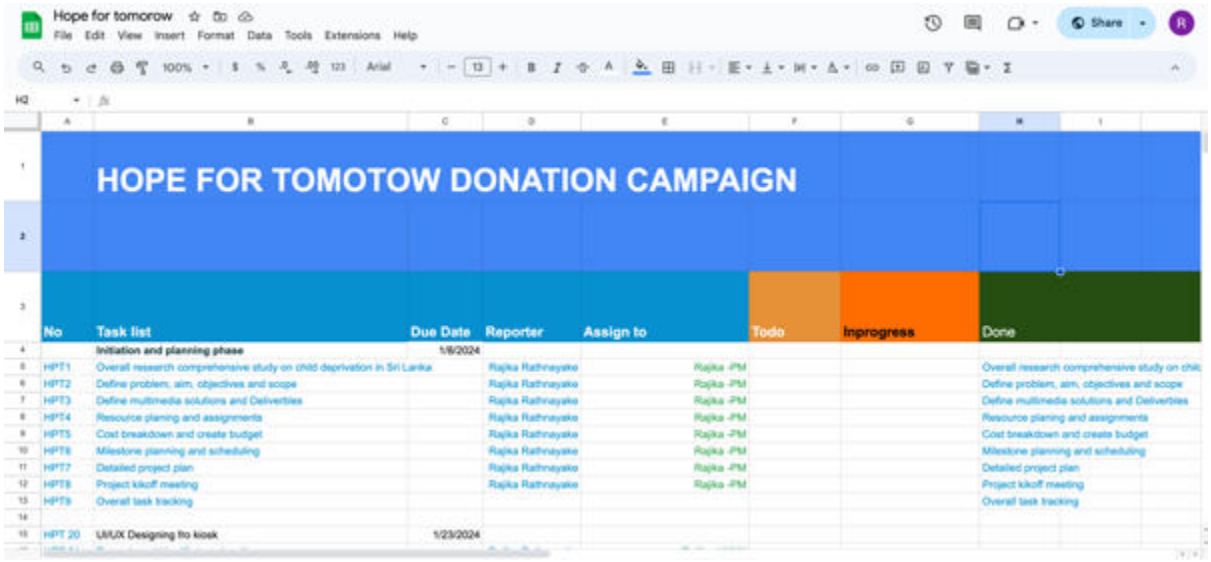

Figure 7- Task list by excel

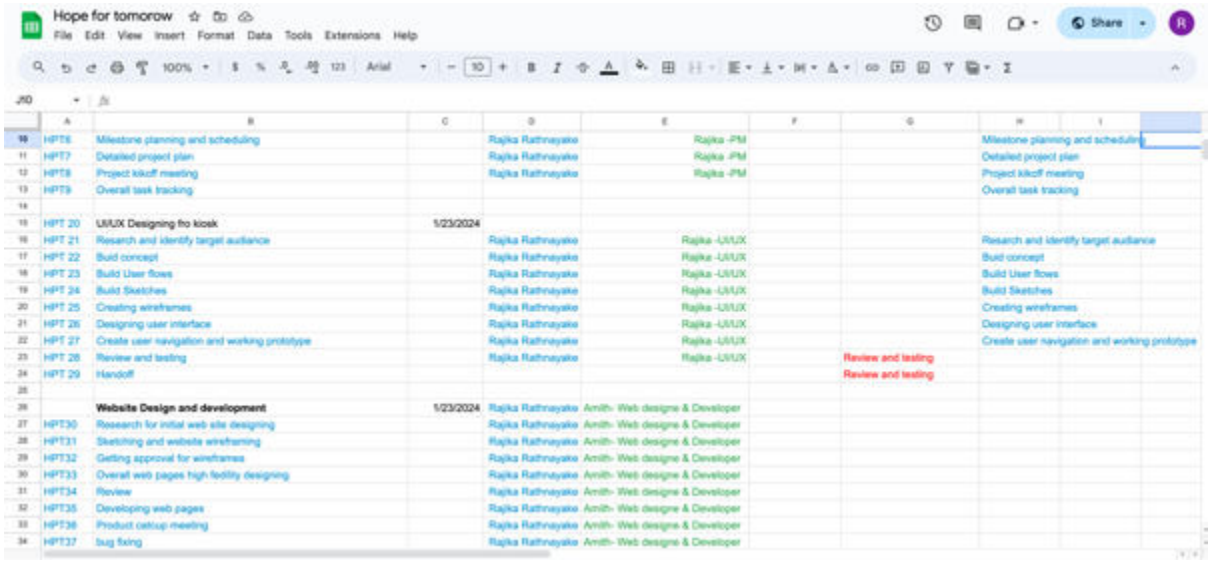

Figure 8- Task list By PM

6.2.1.1.10. Review session.

Figure 15- Review and feedback by whatsapp

Review session and revieing main task of Project Manager. Once team done their product given time line project manager need to review and give feedback for before handover project to QA and owner.

Here by calls and meeting Project Manager review each production by slots and slots

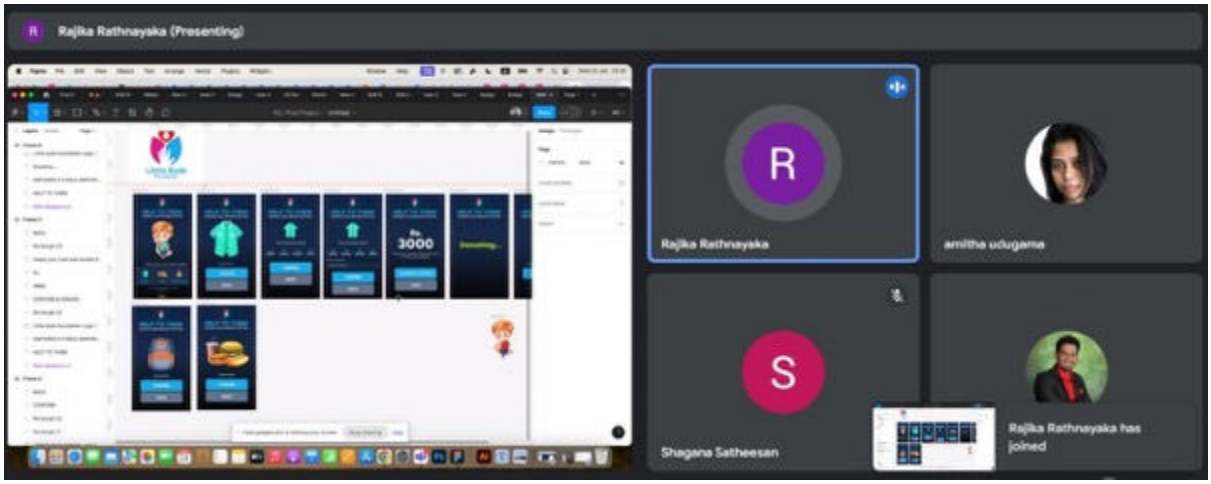

Figure 16- UI interfaces reviewing session- By PM

Figure 17- Web site review

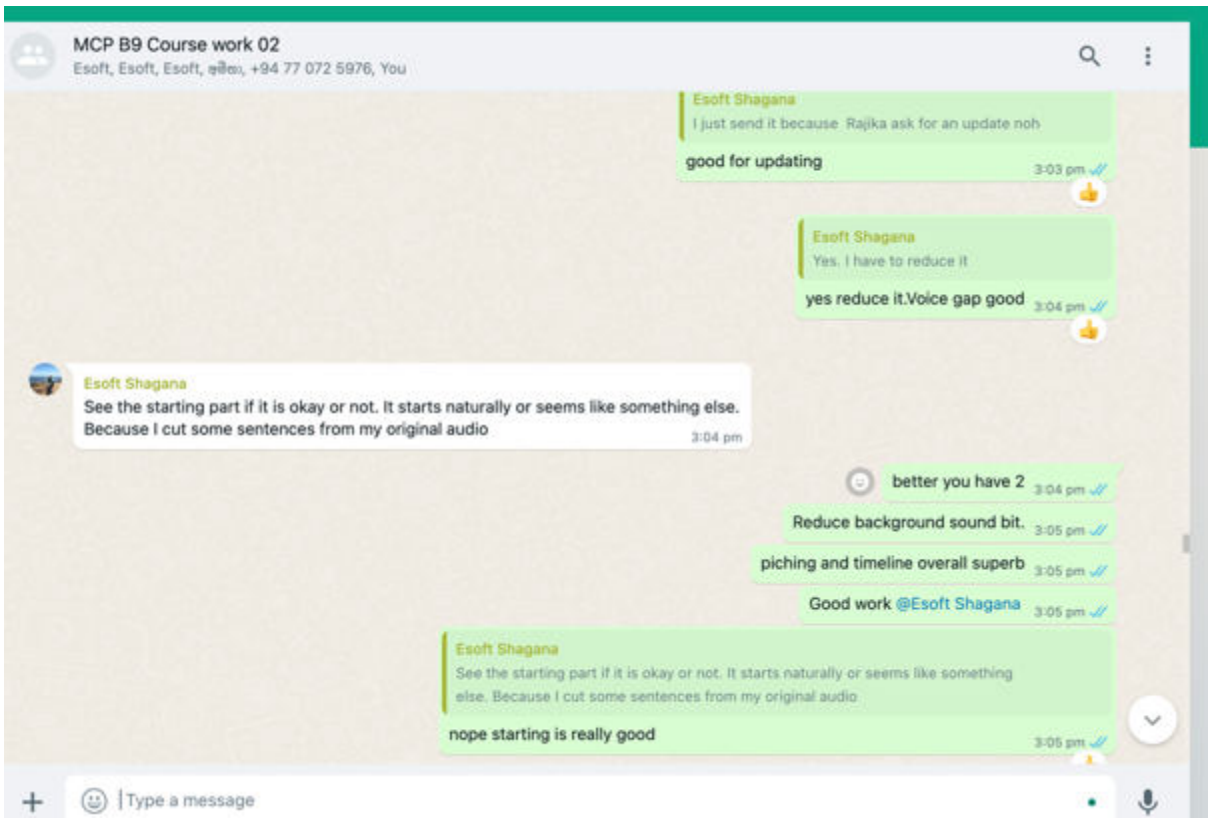

Figure 18- Review and feedback by Whatsapp

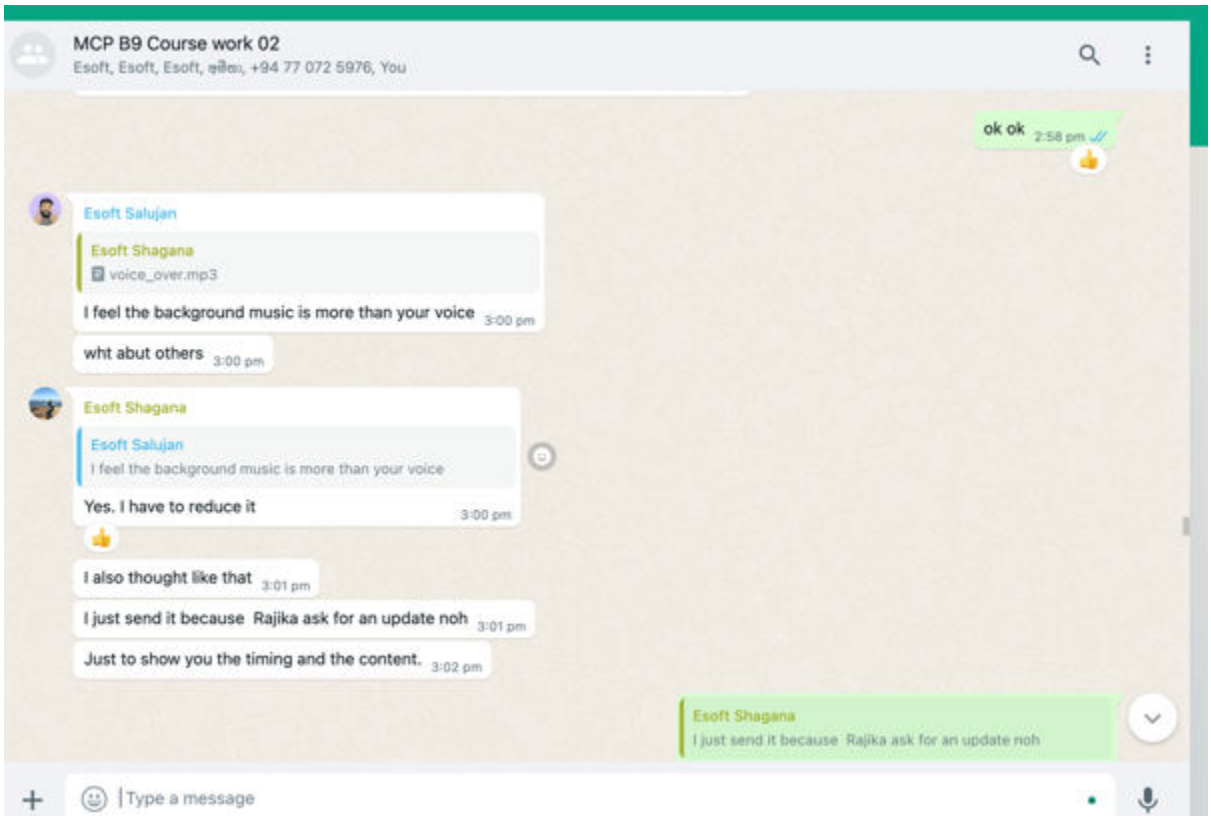

Figure 19- Feedback from Team Members

6.2.2. Brand Design and Development and Production

At this point, the product is tested and project manager and the team feedback is received. To find out more about how customers feel about the product, graphic designers can create surveys, quizzes, and other forms of user feedback. At this stage, the product is shown and promoted to potential customers. Graphic design can be used to create marketing materials such as flyers, product brochures, social media posts, and other visual elements. These resources will be used to promote the product and increase brand awareness.

All things considered, graphic design can play a crucial role in the development of new products by aiding in the visualization and communication of concepts, producing accurate product drawings, and producing marketing collateral that appeals to prospective buyers**.**

6.2.2.1. UI/UX Designer role

Under UI/UX Designer job role below task and duties under “Hope for tomorrow” project assigned by Project manager.

- Research and identify target audience.
- Build concept
- Build User flows.
- Build Sketches
- Creating wireframes
- Designing user interface
- Create user navigation and working prototype.
- Review and testing.
- Handoff

Under this firstly UI/UX designer done deep research about role and the responsibilities abou given jib role .

6.2.2.1.1 Research about UI/UX Designer role

What is UX / UI Design?

If the term "UX/UI Design" is familiar to people, people might be curious about what UX/UI design is and what it actually entails.

With the increasing shift of various aspects to the online domain, UX/UI design has gained prominence. Now, with the proliferation of the "internet of things," attention to the user experience is deemed necessary for almost everything.

UX design focuses on creating a seamless and meaningful user experience by understanding user needs, conducting research, and designing intuitive interfaces, while UI design focuses on the visual, interactive elements of a product to create aesthetically-pleasing interfaces.
(LAMPRECHT, 2023)

UX vs. UI design

UX design refers to the term “user experience design”, while UI stands for “user interface design”. Both elements are crucial to a product and work closely together. But despite their professional relationship, the roles themselves are quite different, referring to very different aspects of the product development process and the design discipline.

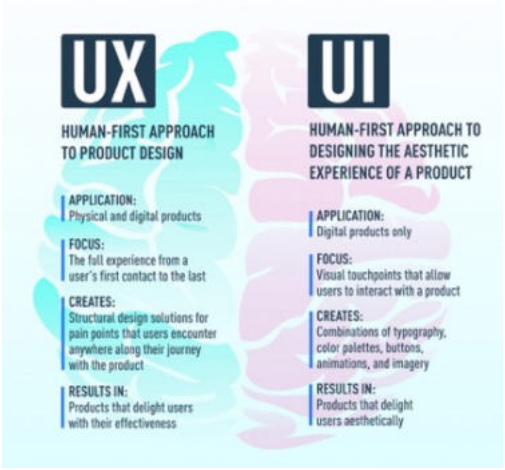

Figure 20- UX,UI- Source-https://careerfoundry.com/

What is user experience (UX) design?

The term "user experience" was coined by Don Norman, a cognitive scientist and co-founder of the Nielsen Norman Group Design Consultancy, in the late 1990s. His definition, stating that "user experience encompasses all aspects of the end-user's interaction with the company, its services, and its products," indicates that UX Design covers any and all interactions between a potential or active customer and a company, regardless of the medium.

As a scientific process, it can be applied to various things such as street lamps, cars, Ikea shelving, and more. Despite its applicability to diverse fields, the term has predominantly been used in digital contexts, with the tech industry's rise coinciding with its inception. Essentially, anything that can be experienced, whether it's a website, a coffee machine, or a visit to the supermarket, falls under the realm of UX. The term "user experience" denotes the interaction between the user and a product or service, and user experience design takes into account all the different elements shaping this experience. (LAMPRECHT, 2023)

What does UX design involve?

“How do I explain what I do at a party? The short version is that I say I humanize technology.” **— Fred Beecher, Director of UX, The Nerdery**

A UX designer thinks about how the experience makes the user feel and how easy it is for the user to accomplish their desired tasks. They also observe and conduct task analyses to see how users actually complete tasks in a user flow.

For example: How easy is the checkout process when shopping online? How easy is it for you to grip that vegetable peeler? Does your online banking app make it easy for you to manage your money?

The ultimate purpose of UX design is to create easy, efficient, relevant, and all-around pleasant experiences for the user.

Here’s what you need to know about UX design in a nutshell:

- User experience design is the process of developing and improving the quality of interaction between a user and all facets of a company.
- User experience design is, in theory, a non-digital (cognitive science) practice but used and defined predominantly by digital industries.

- UX design is NOT about visuals; it focuses on the overall feel of the experience.

UX tasks and responsibilities

Here is an example of a UX designer's typical tasks and responsibilities.

Strategy and content:

- Competitor analysis
- Customer analysis and user research
- Product structure and strategy
- Content development

Wireframing and prototyping:

- Wireframing
- Prototyping
- Testing and iteration
- Development planning

Execution and analytics

- Coordination with UI designers
- Coordination with developers
- Tracking goals and Integration
- UX analysis and iteration

So part marketer, part designer, part project manager, the UX role is complex, challenging, and multi-faceted.

In fact, the role of the UX designer varies hugely depending on the type of company they're working in. You see that iteration of the product, as connected to analysis or testing, is indeed mentioned twice, but in reality, you would put it in between every other item on the list.

Ultimately, the aim is to connect business goals to users' needs through a process of user and usability testing and refinement toward that which satisfies both sides of the relationship.

What is user interface (UI) design?

Despite being an older and more established field, defining "user interface design" is challenging due to its wide range of interpretations.

While user experience involves tasks focused on optimizing a product for effective and enjoyable use, user interface design complements it by dealing with the look and feel, presentation, and interactivity of a product.

However, industries that employ UI designers often confuse these terms, leading to different job posts referring to the profession in distinct ways.

In contrast to UX, user interface design is a term strictly associated with the digital realm.

The user interface serves as the point of interaction between the user and a digital device or product, such as the touchscreen on a smartphone or the touchpad for selecting coffee preferences on a coffee machine.

In the context of websites and apps, UI design encompasses considerations about the product's look, feel, and interactivity. It revolves around ensuring that the user interface is as intuitive as possible, requiring a thoughtful approach to every visual and interactive element the user might encounter.

UI designers focus on elements like icons and buttons, typography and color schemes, spacing, imagery, and responsive design to create a cohesive and user-friendly interface.

What does UI design involve?

Similar to user experience design, user interface design is a multifaceted and challenging role. It involves transferring a product's development, research, content, and layout into an engaging, instructive, and responsive experience for users.

User interface design is exclusively a digital practice, encompassing all visual and interactive elements of a product interface, such as buttons, icons, spacing, typography, colour schemes, and responsive design.

The primary objective of UI design is to visually guide users through a product's interface, aiming for an intuitive experience that minimizes the need for users to overthink.

UI design plays a crucial role in transferring a brand's strengths and visual assets to a product's interface, ensuring design consistency, coherence, and aesthetic appeal. (LAMPRECHT, 2023)

UI tasks and responsibilities

The look and feel of the product:

- Customer analysis
- Design research
- Branding and graphic development
- User guides and storylines

Responsiveness and interactivity:

- UI prototyping
- Interactivity and animation
- Adaptation to all device screen sizes
- Implementation with developer

The role of a UI designer, as a visual and interactive designer, holds significant importance in shaping any digital interface and plays a crucial role in building trust in a brand for customers. Although the brand itself is not solely the responsibility of the UI designer, they are instrumental in translating the brand's essence into the product. (LAMPRECHT, 2023)

It's worth noting the emphasis on the "implementation" of the design in collaboration with a developer. While traditionally UI jobs were distinct from coding, there is a growing trend where the lines between roles are becoming blurred. The term "web designer," essentially a UI designer with coding skills, is evolving into the expertise of user interface designers. Unlike UX, UI is a role that, over time, is

expected to involve coding as part of creating interactive interfaces, leading to the emergence of roles like "UI developer" in companies. (LAMPRECHT, 2023)

2.What does a UX designer do?

2.1. The Design Thinking Process

The following diagram shows the Design Thinking Process, adapted from the d.school. The Design Thinking Process can be broken down into four different stages: inspiration, conceptualization, iteration, and exposition.

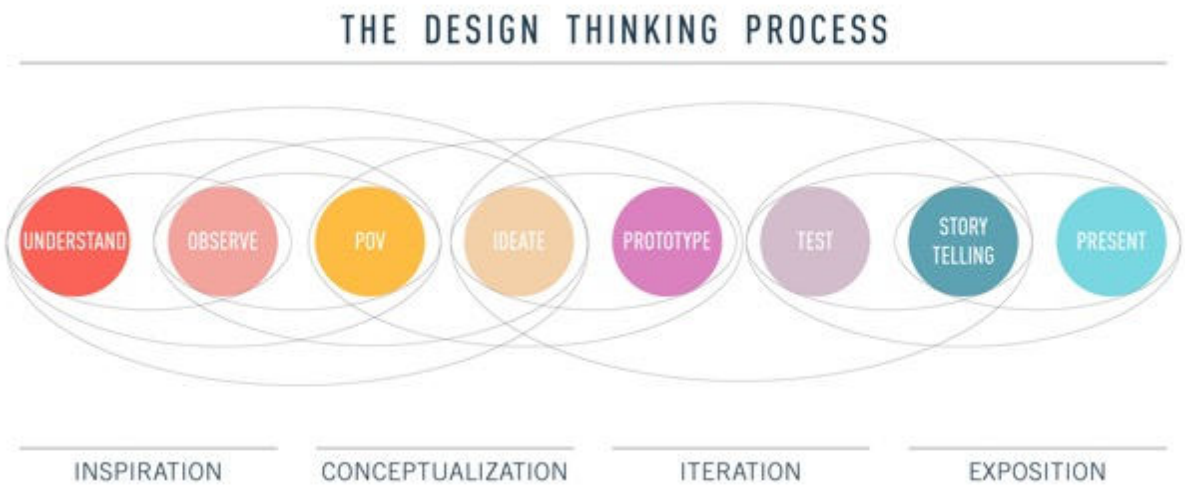

Figure 21- Design Thinking process- Source-careerfoundry.com

The goal of the UX designer's inspiration phase is to comprehend and observe. They accomplish this by thoroughly understanding the issue or difficulty they are attempting to address through in-depth study and competitive analysis. Interviewing people who will be interacting directly with the product is part of this process.

The goals, feelings, problems, and behaviours of the user are then determined by the user experience designer using this input. User personas are formed with the use of all of this data.
The next stage is to think about the trip these personas will take and what they hope to achieve when using a certain product. The designer maps out user flows using a variety of methods, including card sorting, while taking information architecture into account.

2.2. What are a UX designer’s tasks?

Once the user flows have been identified, the designer knows what steps the user needs to follow to perform their desired tasks. They will create wireframes and prototypes of the potential final product as they visually explore solutions for each of these processes.
After receiving prototypes, the UX designer will test the product's usability to see how users interact with it. This indicates whether adjustments are necessary or if the user can accomplish the required tasks.
As part of their daily job, UX designers must not only solve user problems but also explain their concepts and designs to important stakeholders.

2.3. What tools do UX designers use?

The role of a UI designer, as a visual and interactive designer, holds significant importance in shaping any digital interface and plays a crucial role in building trust in a brand for customers. Although the brand itself is not solely the responsibility of the UI designer, they are instrumental in translating the brand's essence into the product.

It's worth noting the emphasis on the "implementation" of the design in collaboration with a developer. While traditionally UI jobs were distinct from coding, there is a growing trend where the lines between roles are becoming blurred. The term "web designer," essentially a UI designer with coding skills, is evolving into the expertise of user interface designers. Unlike UX, UI is a role that, over time, is expected to involve coding as part of creating interactive interfaces, leading to the emergence of roles like "UI developer" in companies.

What kinds of projects do UX designers work on?

As the tech industry grows, the field of UX design is becoming increasingly varied. UX designers can find themselves working on a wide range of projects within various contexts. The following are just some applications for UX design.

Product design

Product design is the process of conceptualizing, creating, and refining physical or digital items to meet specific user needs and deliver a functional, aesthetically pleasing, and marketable solution. It informs a lot of what UX designers work on daily.

There's a lot of **grey between the two**, hence why UX designers often end up working as product designers. More specific products and areas that UX designers work on include:
(LAMPRECHT, 2023)

UX designers play a crucial role in shaping the success of digital products, ensuring a smooth user experience for websites, apps, and software. Their responsibilities include designing online journeys for various platforms, from e-commerce websites to dating apps and CRM software. In addition to digital interfaces, UX designers are increasingly involved in emerging technologies like voice user interfaces (VUI), virtual reality (VR), augmented reality (AR), and service design.

Voice Design:
UX designers contribute to the usability of voice user interfaces, making products like Amazon Alexa user-friendly and accessible.

VR and AR:
As the VR market grows, UX designers are required to design immersive experiences, and AR becomes more mainstream, requiring adaptation for user-friendly experiences.

Service Design:
UX design extends beyond digital products to experiences, where service design comes into play, planning and organizing services to enhance quality and interactions with customers.

Skills:
UX designers need a mix of design skills, business acumen, and soft skills. Proficiency in creating user stories, wireframes, prototypes, and conducting user testing are common requirements. Communication skills, adaptability, and an understanding of business metrics are also valued.

Value of UX Design:
While specific roles within UX design may vary, the core purpose remains consistent—to provide users with an effortless and valuable experience. Inclusive design principles, such as universal design (UD), aim to create accessible and usable experiences for diverse users, considering abilities, disabilities, age, gender, and cultural backgrounds. Universal design principles include equitable use, flexibility, simplicity, perceptible information, tolerance for error, low physical effort, and appropriate size and

space for approach and use. The goal is to ensure that everyone can effectively interact with and benefit from the designed experience.

How to become a UX designer

As observed, UX design encompasses a highly diverse set of skills, making it a multifaceted field. Engaging in UX demands a passionate commitment to user-centric design and a versatile skillset.

A career in UX offers variety, challenges, and financial rewards, with the average salary for a User Experience Designer in the United States reported as $97,460 on Glassdoor.

Getting initiated in UX design necessitates extensive reading and research to understand the UX workflow, become acquainted with industry tools, and establish a robust design portfolio.

While there's no standard background or path that leads to a career in UX, the best UX designers typically share certain qualities and attributes. These include:

- An ability to think both **creatively and analytically**
- A strong gift for **empathy** and a **user-first mindset**
- An interest in **technology** and how humans interact with it
- Strong **problem-solving skills**
- Strong **communication skills** and ability to collaborate

(LAMPRECHT, 2023)

UX vs UI

Figure 22- UI vs UX-Source-careerfoundry.com

6.2.2.1.2 UI/UX Designers task and responsibilities

- Investigating user experience design requirements for our suite of digital assets.
- Developing and conceptualizing a comprehensive UI/UX design strategy for the brand.
- Producing high-quality UX design solutions through wireframes, visual and graphic designs, flow diagrams, storyboards, site maps, and prototypes.
- Designing UI elements and tools such as navigation menus, search boxes, tabs, and widgets for our digital assets.
- Testing UI elements such as CTAs, banners, page layouts, page designs, page flows, and target links for landing pages.
- Collaborating with the marketing team, and internal and external designers to ensure the creation and delivery of tailored experiences for the digital user.
- Providing advice and guidance on the implementation of UX research methodologies and testing activities in order to analyze and predict user behavior.
- Adhering to style standards on typography and graphic design.

Once consider all the research and details to the given task list once research done by UI/UX Designer and understood about ackground around UI and the UX.

6.2.2.1.3 Concept Building and user flows.

Once research done next task is buinding concept and the create user flow.For this first of all identify about the target audinace and stated a build concept.

UI/UX Design for kiosk.

Kiosk is a lates technology can use accept very easily.Very quick and easy steros with it and most of the high level people very familier with this.For collecting funds for Ladybud foundation from kiosk idea trendy and worth for the “Hope for tomorrow” Campaign

Here target audinace is a High end people because kiosk installed and placed by Airports, Super markets as well as shopping malls.

Targeting those kind of peopland Idea hub solution UI/UX designer build concept for collect donations by digital interfaces using kiosk machines.

User flow
Targetting very high end bussy people user flow has drawn by UI/UX designer using Miro Software.

By this user flow as a first step user can see main interface with High prominent button with name “donate now”.

By pressing/ touching donate now under redirect to the the catogries screen.By it user can select what kind of category user going to help to the children who needs helop.

Once user select category and then user redirect to the amount choosen screen and by it user can select and enter kind of amout they going to donate.

By touchng confirm user direct to the screen with amount showing and by presiing donate now button paymnt process happening by backend.

Kiosk with tap card or enter card or swipe card option. By any option user donate amount and process completed by giving invoice and thank you.

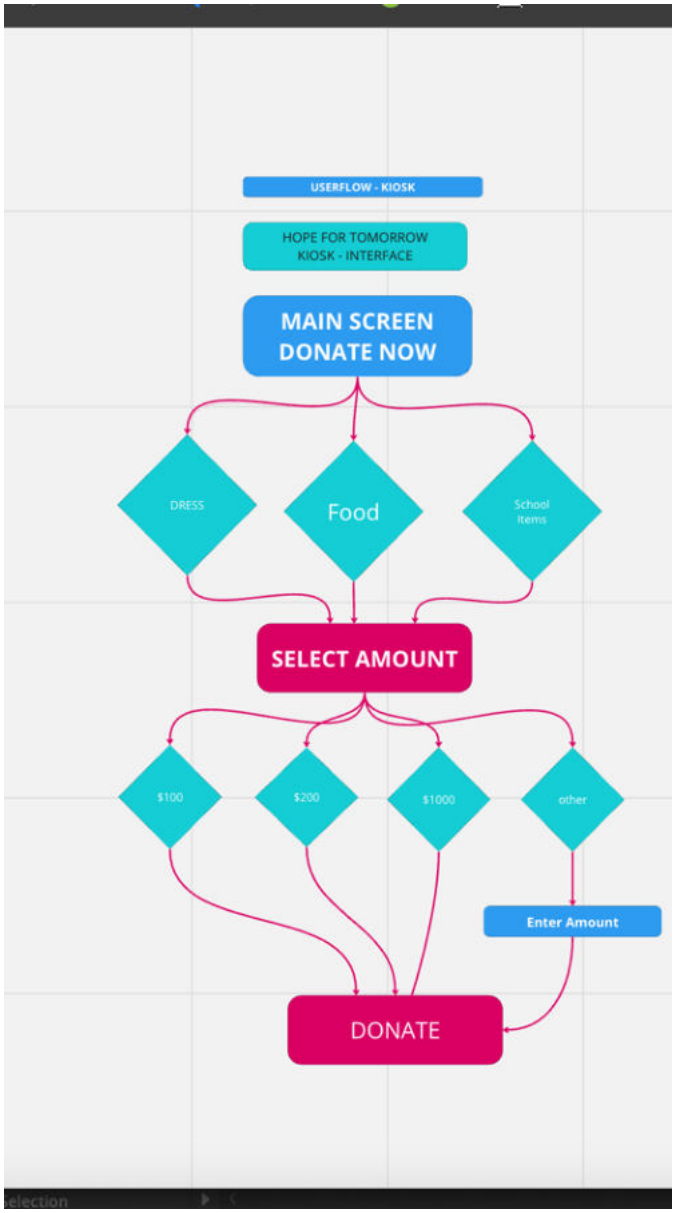

Figure 23- User flow diagram-By UI/UX designer

6.2.2.1.3 Sketching

Sketching is a main part of the ui/ux designers journey.By creating sketchers Designer can get a better approach fro the project without any ishues. Some time by showing sketches Designer can get initial approval for the project and without any barriers and depencdencies designer can proceed the work.

Designer used papers for the sketches and roughly visualizing icons buttons place holders and Images where going to placed. Imcreaing easy steps and user experience designer done sketchers shown below.

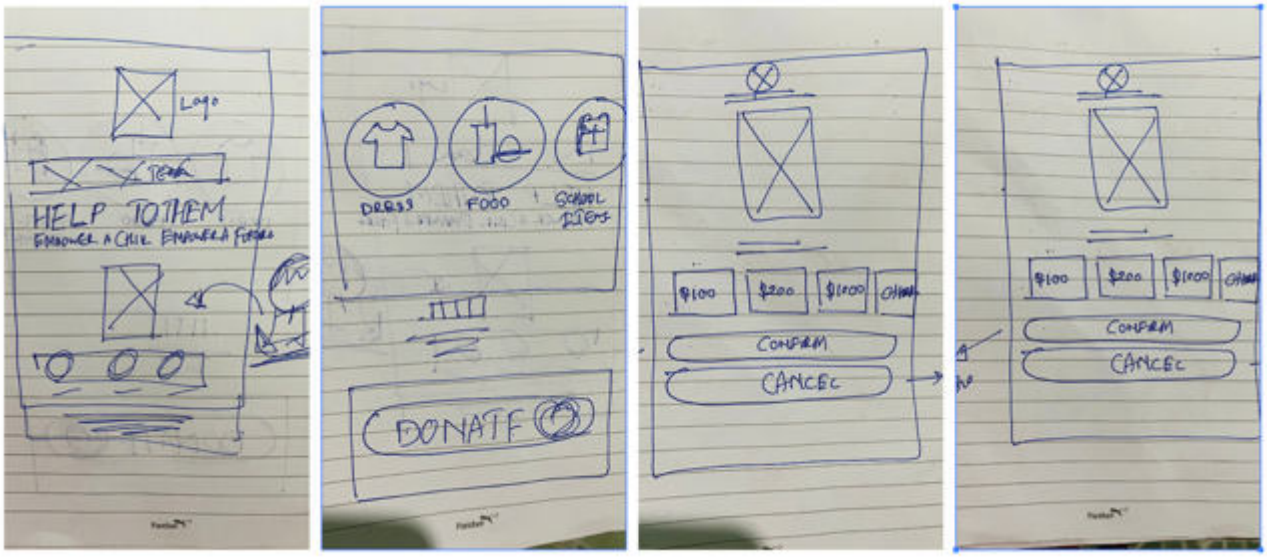

Figure 24- Sketches

6.2.2.1.4 Wireframing

Wireframing is a way to design a screens for a requirement at the structural level. A wireframe is commonly used to layout content and functionality on a page which takes into account user needs and user journeys. Wireframes are used early in the development process to establish the basic structure of a page before visual design and content is added.

A wireframe is a layout of a any page that demonstrates what interface elements will exist on key pages. It is a critical part of the interaction design process.
The aim of a wireframe is to provide a visual understanding of a page early in a project to get stakeholder and project team approval before the creative phase gets underway. Wireframes can also be used to create the global and secondary navigation to ensure the terminology and structure used for the site meets user expectations.

It is quicker and cheaper to review and amend the structure of the key pages in a wireframe format. Iterating the development of the wireframes to a final version will provide the client and the design team confidence that the page is catering to user needs whilst fulfilling the key business and project objectives.

Often used to complete the User-Centred Design process, wireframes are also used at the beginning of the design phase. A prototype usability test will often be a test of the wireframe pages to provide user feedback prior to the creative process.

Wireframes can be simply hand-drawn but are often put together using software like Microsoft's Visio, to provide an on-screen delivery.

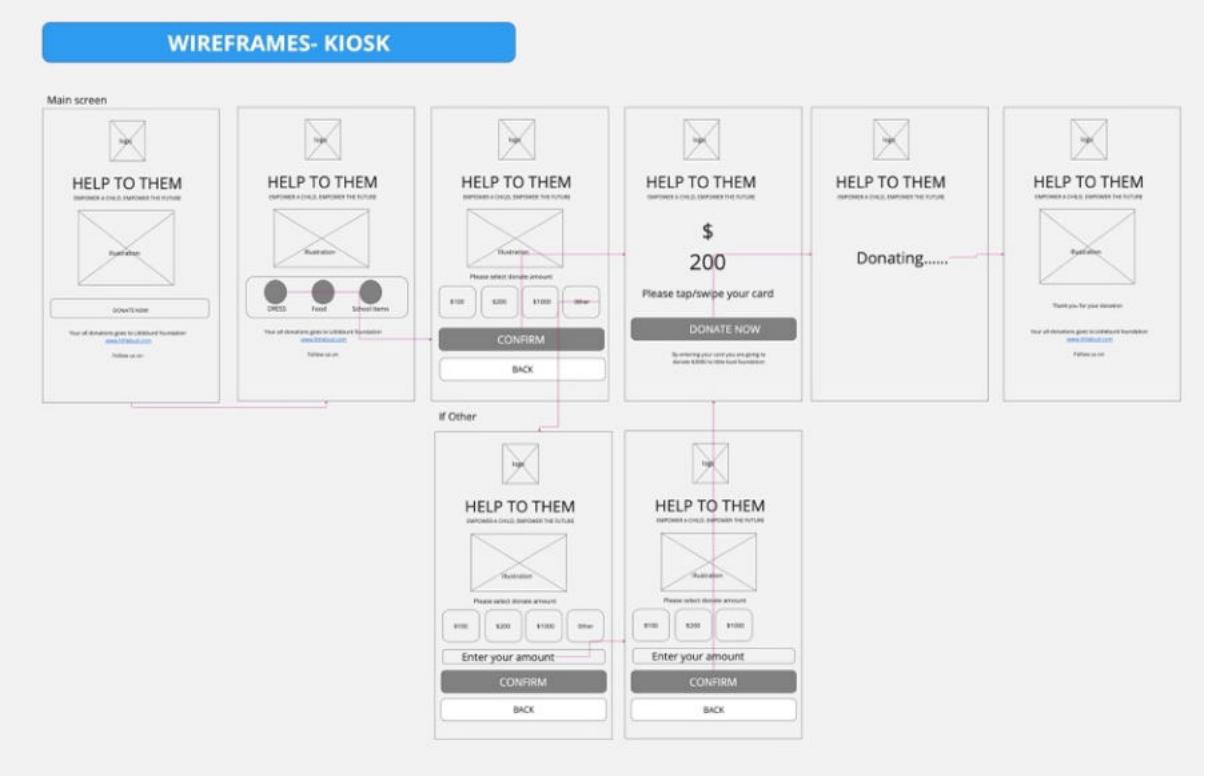

One of the great advantages of wireframing is that it provides an early visual that can be used to review with the client. Users can also review it as an early feedback mechanism for prototype usability tests. Not only are wireframes easier to amend than concept designs, once approved by the client and the users they provide confidence to the designer.

From a practical perspective, the wireframes ensure the page content and functionality are positioned correctly based on user and business needs. And as the project moves forward wireframes can be used as a good dialogue between members of the project team to agree on the project vision and scope.

According to hope for tomorrow campaign considering sketches wireframes done by UI/UX designer using Miro software.

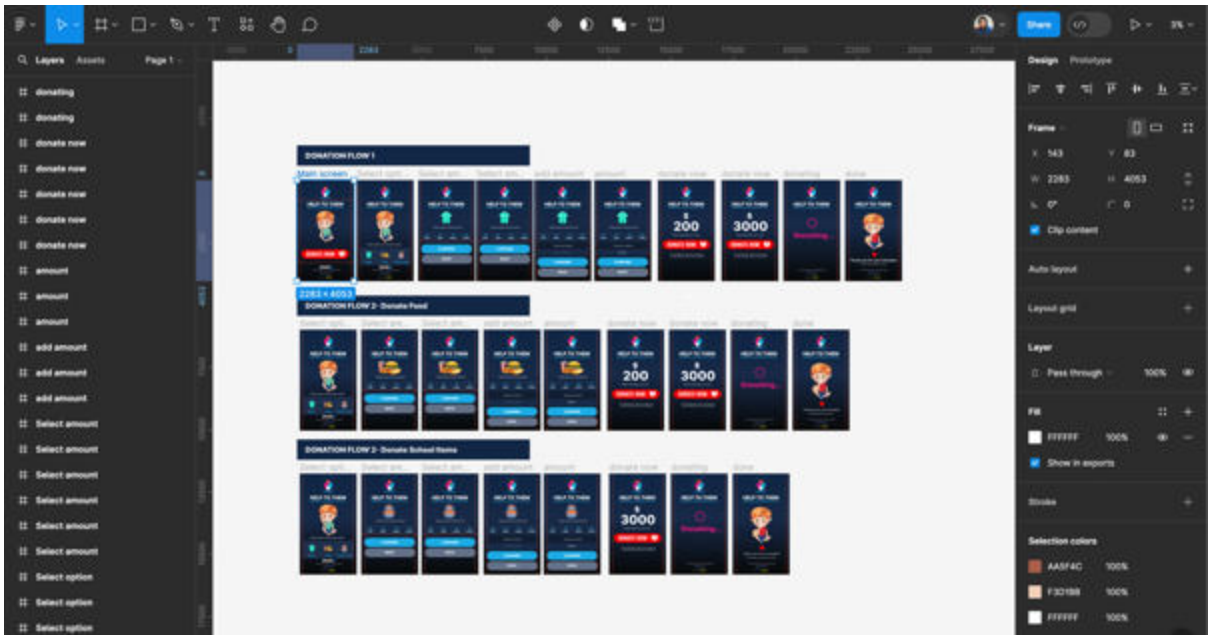

(Placeholder2)Figure 25- Wireframes using Miro software by UI/UX designer

6.2.2.1.4 UI Designing

Once concept and the wireframes approved by PM UI/UX designer started designing user interfaces by Figma software.

For design user interfaces below design elemnts used by UI/UX designer

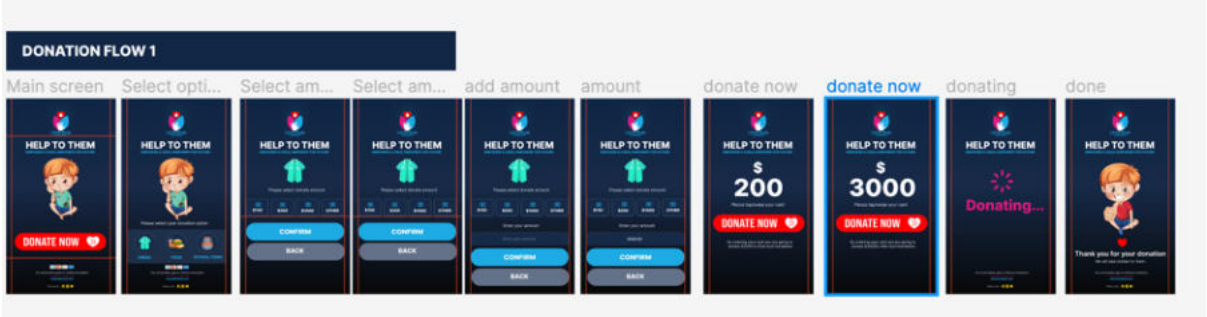

Figure 26- Donation flow 1- By designer

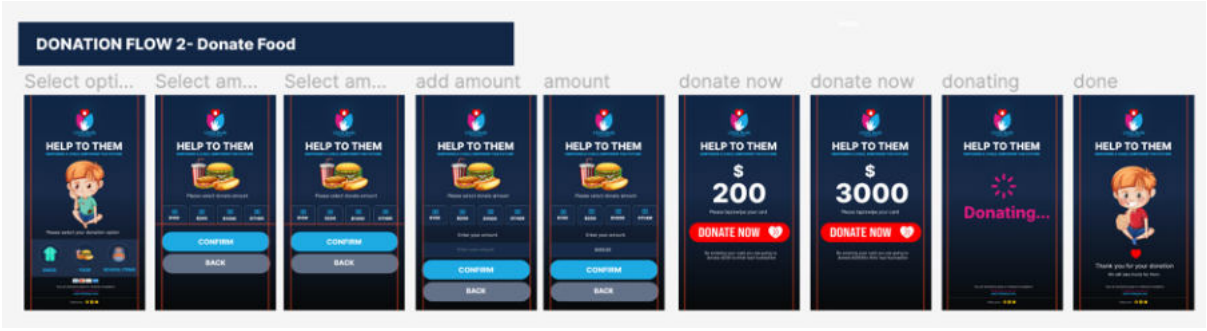

Figure 27- Donation flow 2 by designer

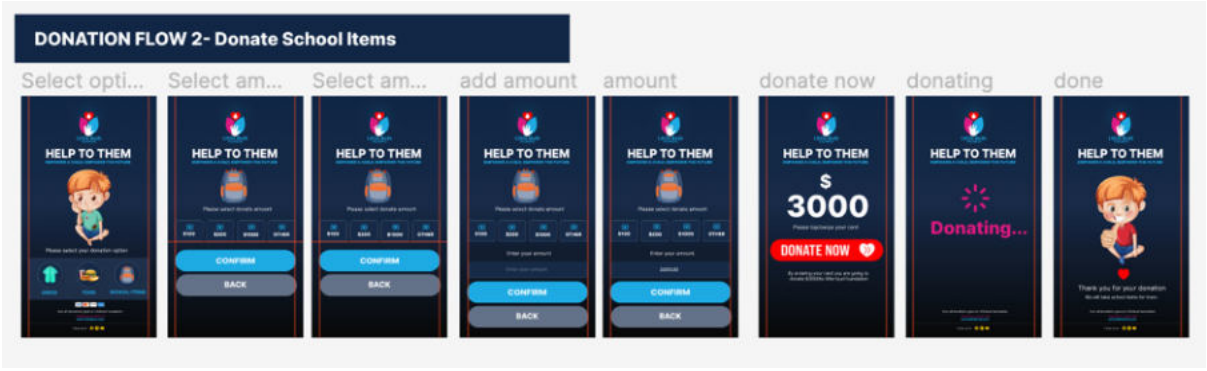

Figure 28- Donation flow 3 by Designer

Figma Link

https://www.figma.com/file/nteLbV8TnMnu4GRRiUNkpu/course-work-2--Kiosk?type=design&node-id=0%3A1&mode=design&t=jkwIEnpHglMeWMnj-1

Colors

User interface designing is a very critical stage and inclusing UX and the CX. Here background gradiant color gave eye catching and prominent look for the UI.

By UI going to force user to go and donate. By emotionally force using ui mean UI s should be very attractive and elegant.
Using brand guideline and logo colours designer collerred the other elemnts

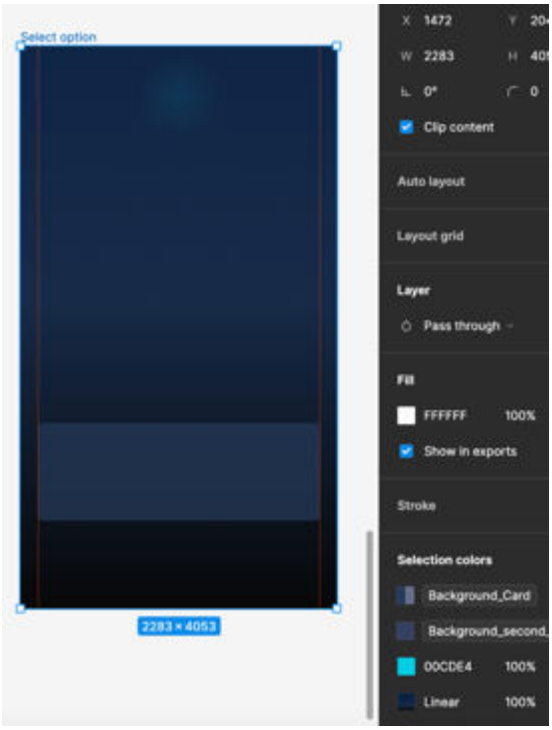

Figure 29- Background color by designer

Buttons

To gave main attractive and prominence designer used red colour button for donate now. By red colour designer was able to show emergency, Quickly children needs help from the audience.

Other buttons normally used from the brand colours and make those butting lengthy and bit big. Because of the target audience attractiveness and reduce mistakenly button click.

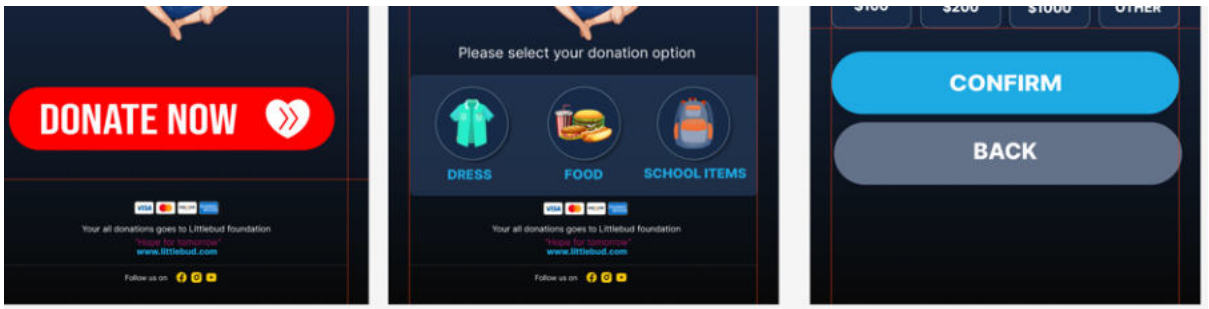

Figure 30- Buttons - By designer

Typography

According to the target audience designer used prominent and increased text size because user don't want to stay much time near kiosk and read much time and waste their time. By big sizes font user can quickly read instructions and steps.

UX

By reducing unwanted steps designer able to increase ux in the interfaces and easy navigate to the user to end goal called donation.

Size of the artboard

Designer used actual size of the kiosk interface and those very useful for the getting real experience while creating protype and get real user experience

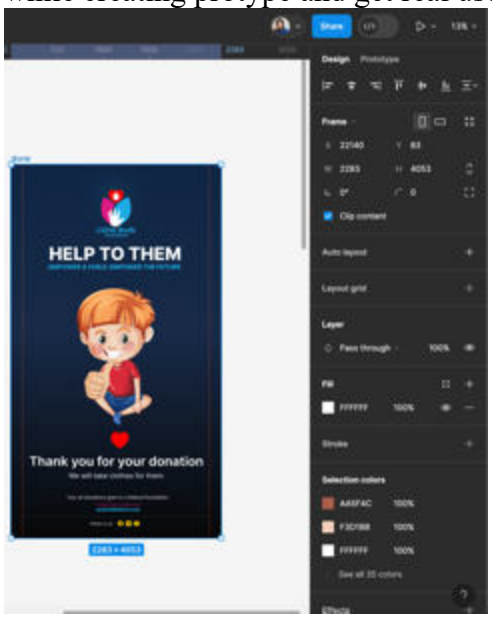

Figure 31- Size of the arteork

Image

By image designer wants to generate sympathy from user mind. Because of that poor child illustration uderd by designer. This illustraions made by Adobe illustrator and Alll the imageries design by designer.

Figure 32- By designer- Characters

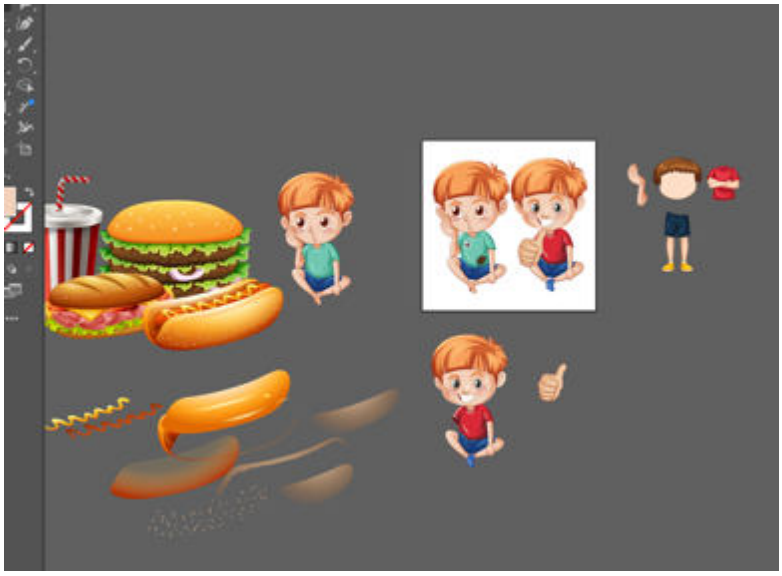

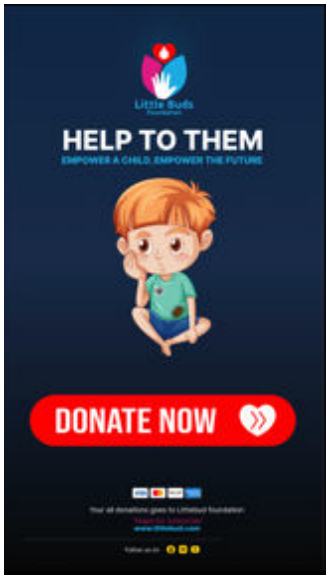

Figure 33 Adobe illustrator working file

6.2.2.1.5 User Navigation flow

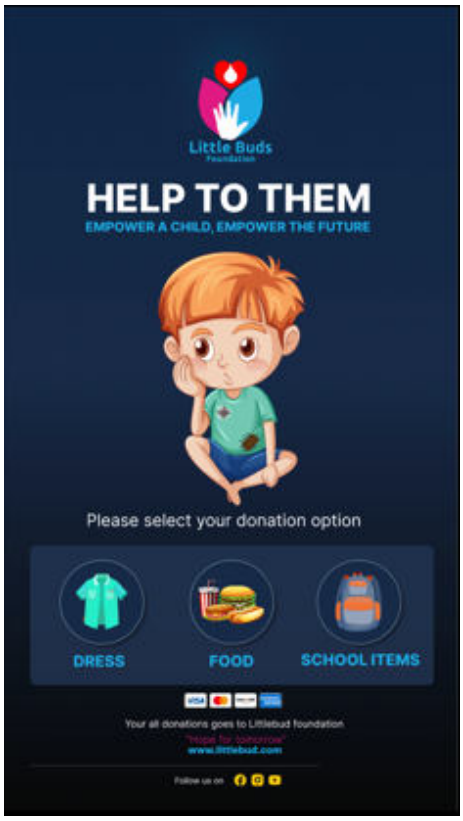

Step 1

User can see main Screens with “Donate now” button

Step 2

User can select for what kind of things going to donate option from “Derss, Food, School Items”

Step 3

Once user choose opting simple step for setup amount from given amount if user select other user can enter amount user like.

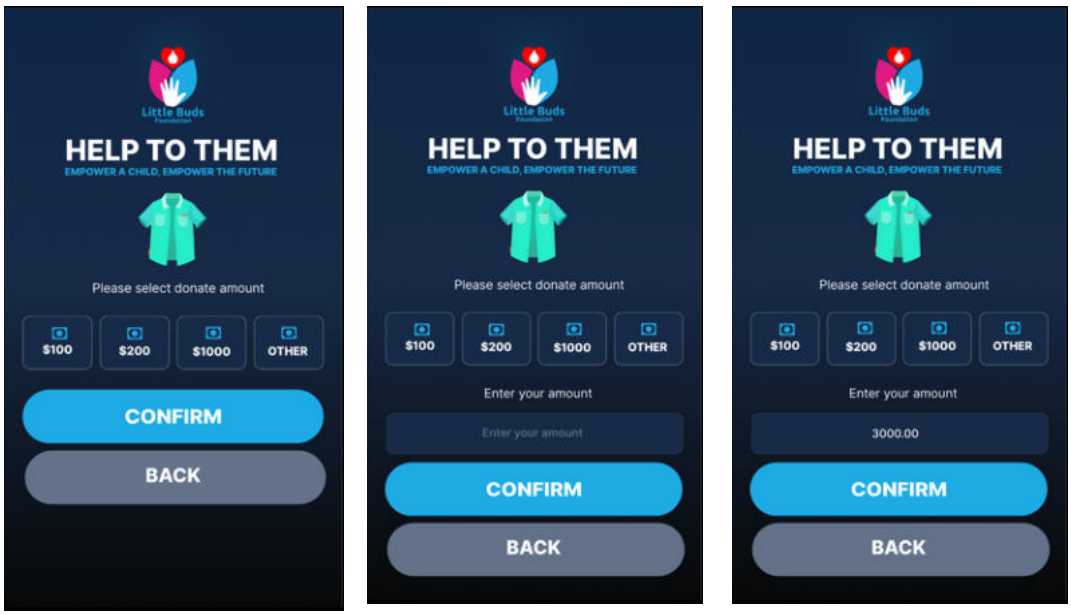

Figure 34- Amount interfaces

Step 4

If user select given amount box user redirect to the confirm screen. If select other option user enter amount and then redirect to the same confirmation screen with amount shown.

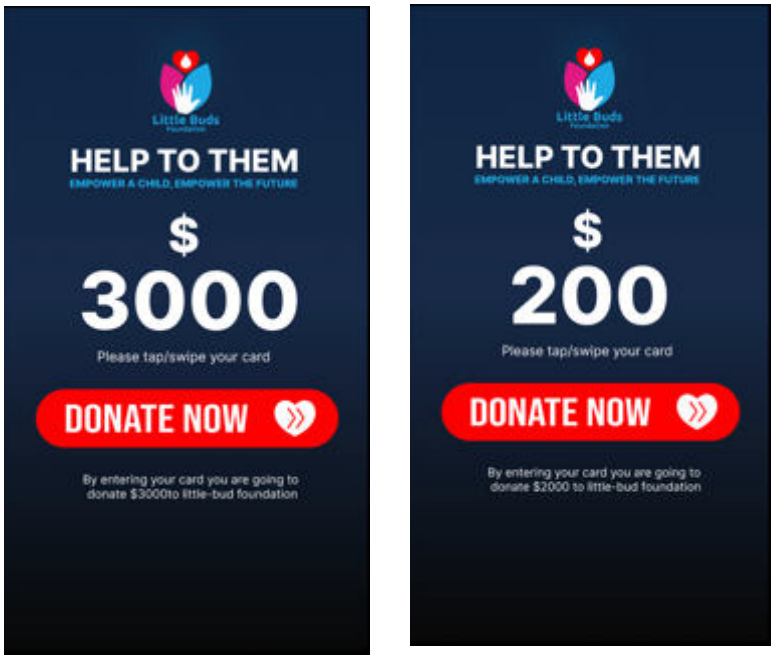

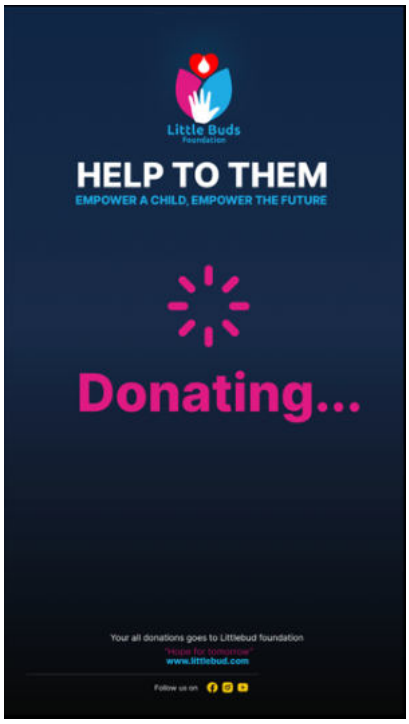

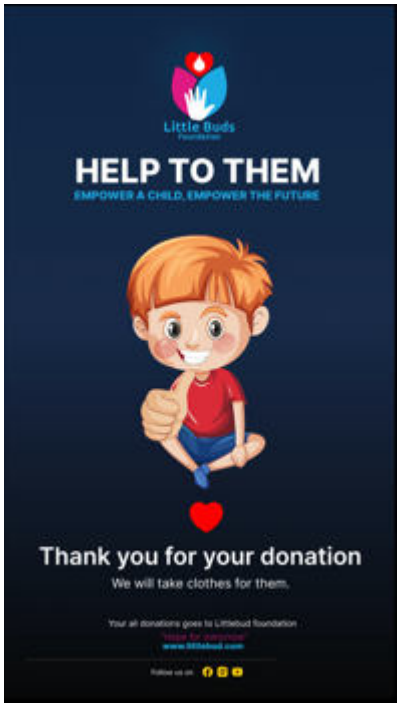

Figure 35- Amount confirm screens

Step 5

Once user By pressing donate now button agree to donate and the payment process starting. Coring to the machine hardware part user can swipe /Tap or enter card and by payment process payment happen. By backend payment process handles and designer add processing screen for keep user wait for few movement for giving invoice. Finally with invoice happy mode kids with tank you screen will be there.

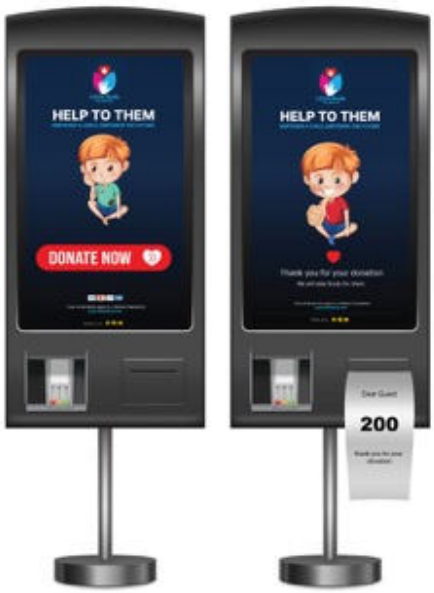

Figure 36- Invoice

User interfaces with kiosk machine

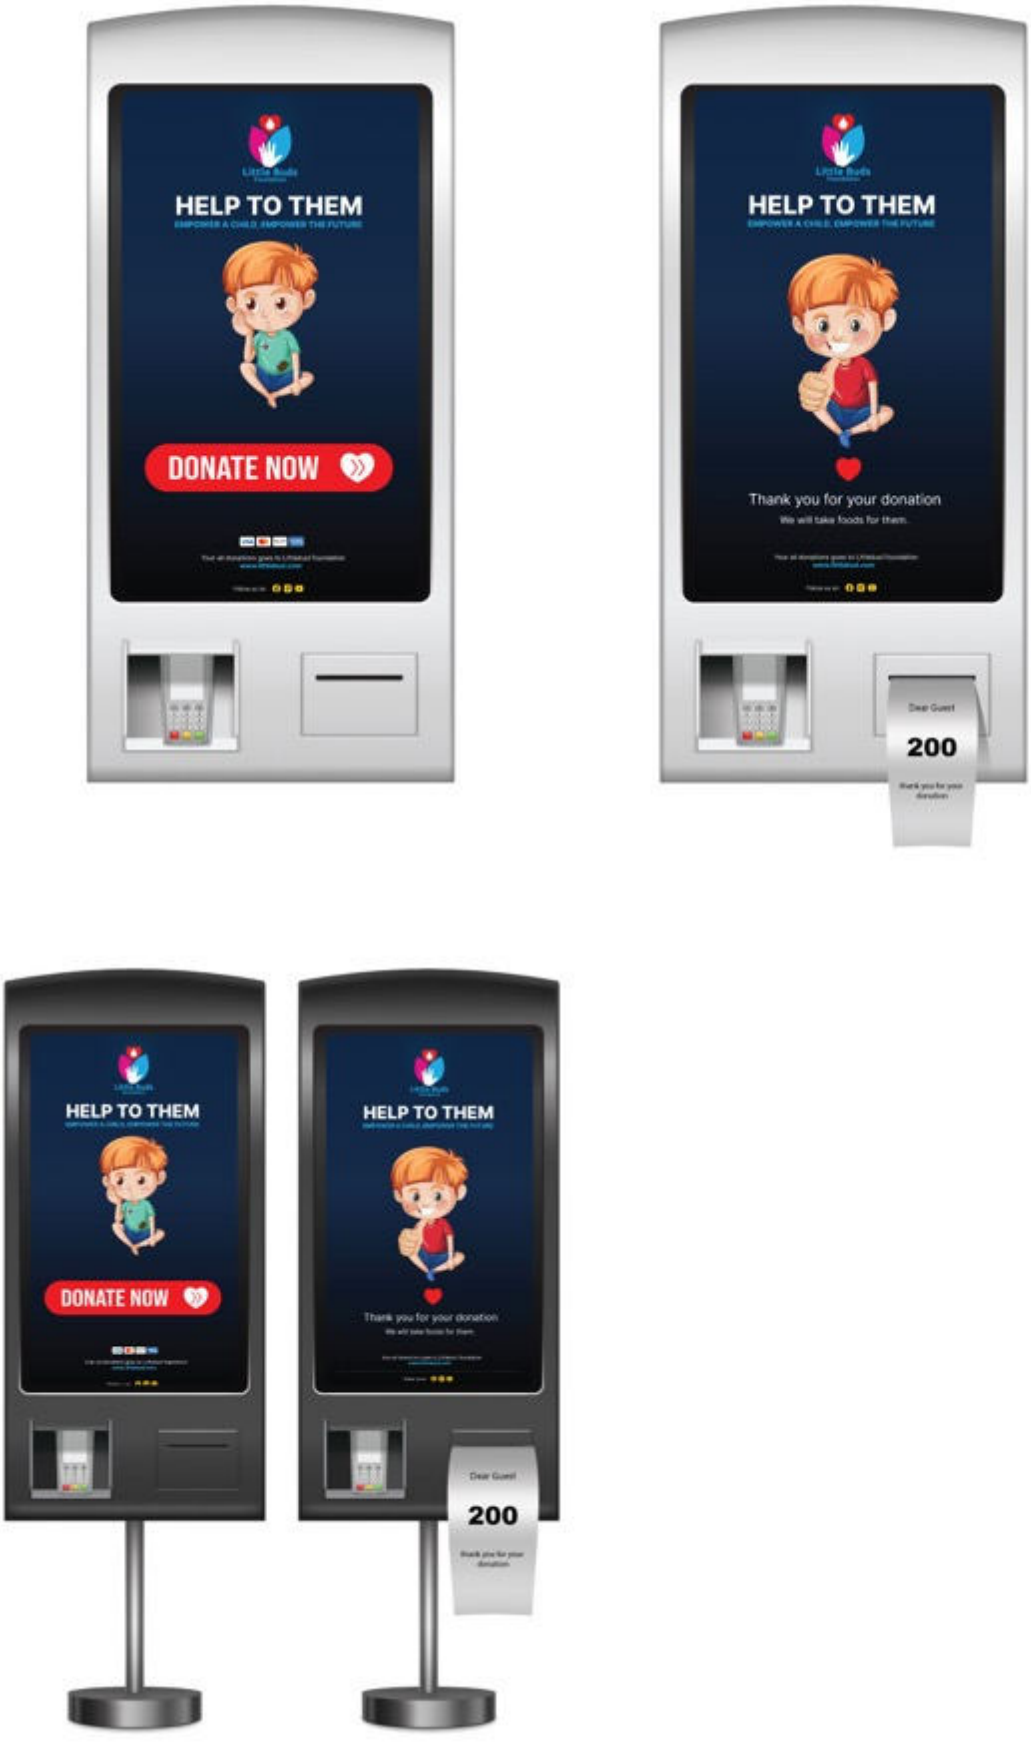

Figure 37- Machine with screen

6.2.2.1.6. Designing Posters

Once completed user interfaces as a help for a Graphic designer and the project UI designer focused for designing posters for digital screens c

Target places

- Digital screens located in bus halts.
- Middle of the city
- Airports
- Shopping malls
- Supermarkets

That kind of places daily eye catching to the people and by posters can give quick mgs and approach to the user to donate and help to the kids who needs essentials.

This type of posters basically should be with big and clear font because while users travelling by bus, or any vehicle easy user can catch the massage looking and reading.

Without less element designer designed posters for give more attractive approach.

6.2.2.2.1. Poster Design 1

Figure 38- Poster design By- UI Designer

Evaluation poster 1

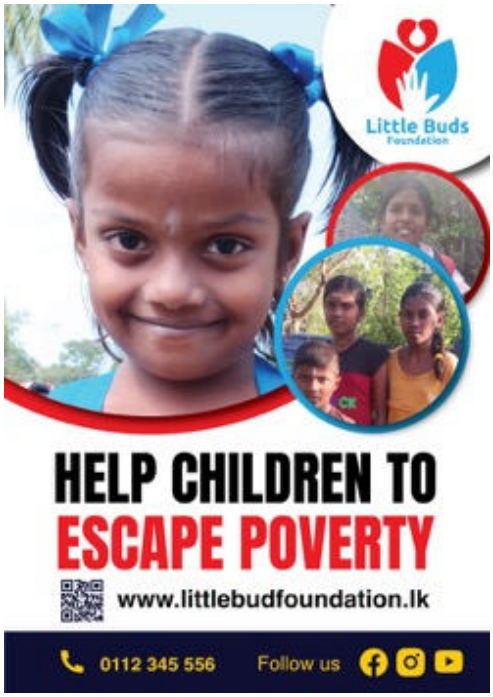

The image features promotional content for an organization called Little Buds Foundation. On the left side of the image is text that reads "Humanity starts with giving", highlighted in red and white for emphasis. Below this statement is a supportive message in a smaller font: "Small children who out of their basic essentials, needs your help." A call to action, "Donate Today," and a website link, "www.littlebuds.com," with a QR code below it, invite viewers to contribute to the cause.

The right side of the image displays a young boy who is smiling at the camera. He has short black hair and is wearing a white t-shirt and those looks like sign of sympathy and poverty. Designer used that kind of image because to gain sympathy from the user and get more donations.

At the bottom of the image, there is additional text encouraging people to follow the organization on social media, symbolized by icons for Twitter, Facebook, and Instagram. There is also a phone number provided: "0112 345 555."Because by seeing user can call and get more information.

The image uses a combination of visual and textual elements to communicate its message of philanthropy, aiming to encourage viewers to support children in need by donating to the Little Buds Foundation.

Poster design 2

Evaluation poster 2

This image is a colorful poster or flyer design, presumably for an organization called "Little Buds Foundation," which appears to be a charitable group focused on helping children.
At the top of the poster, there is a logo that features the name "Little Buds Foundation" in a playful and friendly font, suggesting a focus on children or youth.

The main visual of the poster is divided into two parts:
1. In the foreground, there is a close-up photograph of a young girl. She is smiling at the camera, with her head slightly tilted. She has dark hair tied up with a blue ribbon, clear skin, and dark eyes. Her joyful expression is the focal point of the image.

2. In the background, slightly out of focus, there is a photo of three children. One of them is making a peace sign. This second image creates a depth effect and emphasizes the poster's focus on children.Those gain sympathy.

In the center of the poster in large, bold, white and red lettering is the call to action: "HELP CHILDREN ESCAPE POVERTY." This message is emphasized by its size and placement, aiming to immediately draw the viewer's attention to the purpose of the foundation.

Beneath this text, there is a tagline or slogan in quotation marks that says: "Hope for tomorrow."

At the bottom of the poster are two phone numbers, presumably for the foundation. One is in bold white text with a red background and the other in bold red text with a white background, making both numbers highly visible. These are likely provided for contact or donations.

The overall design of the poster uses a mix of bold colors, persuasive imagery, and emotive messaging, all common features in nonprofit or charity advertising, intended to evoke empathy and encourage viewers to take action to support the cause.

Poster Design 3

Figure 39- Poster design 3 by UI designer

Evaluation

The image appears to be a poster or an advertisement aimed at soliciting help for a charitable cause. It features a dark blue background with text and graphical elements primarily in white, pink, and light blue, which stand out against the darker hue.

At the top of the image, in a light blue banner, the text reads "Give a Child a Better Future" in white capital letters. Below this banner, in large, bold, pink capital letters, the statement "WE NEED YOUR HELP" is prominently displayed.

In the center, there is a logo consisting of a heart shape made up of two human figures with a smaller heart between them. The colors of the logo are a gradient of pink and light blue. The text surrounding the logo says "Hope for tomorrow" in white letters, and the name "Little Buds Foundation" in light blue, followed by a website URL "www.littlebud.com".

Below the logo and text, there is a stylized representation of numerous raised hands in white, with different shapes and sizes, suggesting diversity and unity in the act of reaching out or volunteering.

Overall, the design of the image suggests that the Little Buds Foundation is requesting assistance, possibly through volunteering or donations, to support their cause of giving children a better future, with a hopeful message for tomorrow.

Poster design 4

Figure 40- Poster design 4 by UI designer

Evaluation

The postercfeatures a banner or advertisement that combines graphic elements and a photograph to convey a message. On the left side of the image, against a textured blue background, the phrase "HUMANITY STARTS WITH GIVING" is prominently displayed in white and red uppercase letters. Below this text is a URL: www.littlebud.com, which suggests that it is the web address for an organization or campaign associated with the message.

To the right of the text, there are two logos. The first logo is for the "Little Buds Foundation," depicted as a stylized flower or bud with a human figure in the center, combining elements of care and growth. The text "Little Buds Foundation" surrounds the graphic part of the logo. The second logo is a pink circle with what appears to be a stylized drawing of two people—a smaller figure embraced by a larger figure, signifying protection, or support. This logo also includes the text "Little Buds Foundation" and has the additional words "New York City" encircling the bottom.

On the far right side of the image, there is a photograph of a young boy. He is looking directly at the camera, with a neutral expression. The boy is wearing a white T-shirt with the word "SPORTS" visible on it in black letters, although the full text on the shirt is not entirely visible. The background of the photograph is a pale surface, contrasting with the darker elements of the design on the left side of the banner.

Overall, the image seems designed to promote the "Little Buds Foundation" and its humanitarian message, emphasizing the importance of giving. The inclusion of a child in the advertisement is likely intended to evoke empathy and highlight the focus on supporting children or youth through the foundation’s activities.

Poster Design 5

Figure 41- Poster design 5 by UI designer

Evaluation

The image is a promotional graphic, possibly for a foundation called "Little Buds". The overall color scheme is predominantly pink and blue with white text.

At the top, there is a logo which consists of what seems to be a stylized human figure with a heart shape in the middle. The figure is in pink and blue colors, suggesting warmth and care, and is positioned above the text "Little Buds Foundation" in white, with the foundation's name in a casual handwritten font style.

Below the logo and the name of the foundation, in a bold, sans-serif font, is the word "DONATE!" in all caps, which serves as a clear call to action.

In the central part of the graphic, there is a large black and white QR code. This code likely redirects to a website when scanned with a QR code reader. By this user can easily redict to the donation while going on the bus or vehicle. People dnt want to wait and read and waste their time. Campaign purpose also increased donations.

Underneath the QR code, the foundation's web address, "www.littlebud.com", is provided followed by the slogan "GIVE A LITTLE. HELP A LOT." in capitals, which conveys the message that even small contributions can make a significant difference.

At the bottom of the graphic, there is an inspirational quote or tagline, "Hope for tomorrow," written in italics to underscore the forward-looking, positive impact of the foundation's work.

Overall, this image seems designed to attract attention and encourage viewers to engage with the charity, either by visiting their website or making a donation to support their cause.

Bill board Design

Billboard advertising is effective for building brand awareness. This is because it broadcasts your business (or product or campaign) to many people.
Billboard advertising is so successful because they are seen by millions of people every day. This makes them one of the most cost-effective methods of reaching large audiences quickly and easily across a wide or local geographic area.

Advantages of Using Billboards

1. Visibility
When it comes to advertising, bigger is *always* better. As such, one of the best advantages of using billboards is that they come in a variety of eye-catching sizes to reach a large number of consumers.
The smallest size billboard, called a “poster,” measures about 12 feet by 24 feet.2 At their biggest, billboards can be as large as 20 feet high by 60 feet wide, making them

2. Always On

Internet, TV, and even radio ads might be impressive for their digital glitz. But advertising in those mediums can mean that, unless the consumer decides to turn on a specific device, your ad might not be seen.

On the other hand, billboards are always on—and what's more, consumers don't have the option of turning them off if they don't like your ad. That means more impressions on your advertisement. In fact, studies show that 71% of people consciously look at billboards when driving.

Even if a consumer looks away from your billboard after seeing it, they've most likely noted important information like the name of your company or information about the services you offer. Additional surveys have found that 26% of passersby noted a billboard's phone number and 28% retained a website address listed on a billboard.4

To that end, billboards offer 24/7 exposure to help advertisers target a diverse audience.

3. Location

When it comes to successful billboard advertising, location is key. One of the biggest advantages of using billboards is the options you have when it comes to placing your advertisement.

A well-placed billboard ad can potentially reach not only people in their cars, but also cyclists, pedestrians, and people who use public transportation. For instance, when selecting a billboard rental in Atlanta, choosing a billboard along the highway vs. the downtown area might produce different results. But aside from the obvious benefits of advertising in high-traffic areas, billboard advertising provides you with a few other geographic advantages as well, such as:

4. Audience Diversity

Billboards offer unique opportunities for businesses to reach a large and diverse range of consumers. Other advertising methods might give you better options for targeted advertising, but billboards can reach consumers you never even knew existed, and who might need your product most.

On highways, billboards are seen by most drivers, from local commuters to visiting families. But even smaller posters and bulletins on local roads can help your business attract a wider variety of local consumers.

5. Greater Impressions

Billboards are also a great way to increase impressions on your advertising. That's because, even if they seem old-fashioned, billboards remain a type of advertising that consumers notice, trust, and remember. Couple that with the captive audience we mentioned above and you've got a winning combination. In fact, studies show that 37% of Americans look at billboards whenever they pass one, and almost 71% do this intentionally.

Because of these designers done two billboard design for the campaign.

Figure 42- Poster with Mockup

Figure 43- Billboards designs

At this point, the product is tested and project manager and the team feedback is received. To find out more about how customers feel about the product, graphic designers can create surveys, quizzes, and other forms of user feedback. At this stage, the product is shown and promoted to potential customers. Graphic design can be used to create marketing materials such as flyers, product brochures, social media posts, and other visual elements. These resources will be used to promote the product and increase brand awareness.

All things considered, graphic design can play a crucial role in the development of new products by aiding in the visualization and communication of concepts, producing accurate product drawings, and producing marketing collateral that appeals to prospective buyers**.**

6.2.2.2. Graphic designer role

Under Graphic designer job role below task and duties under “Hope for tomorrow “assigned by Project manager.

- Research solutions for problem/Job Role
- Idea generation
- Project kickoff meeting with PM and team
- Social Media content creation and photoshoot
- Post and Posters Designing
- Brochures Designing

- Getting approval and review session
- Design changes.
- Feedback and review session
- Fixing
- Getting Final approval

Under this firstly done deep research by graphic designer role and the responsibilities by graphic designer.

6.2.2.2.1 Research about Graphic designer role

What Is a Graphic Designer?

Graphic Designers create visual concepts with the goal of attracting the interest of clients through digital and physical designs that typically use graphics, images, art, and other visual elements. Although Graphic Designers may use a variety of tools to create their designs, all Graphic Designers must be able to use their hands at least occasionally to create designs, even if they prefer to rely on their digital skills and graphic design software.

Graphic Designers come with different educational and professional experiences, with some possessing a four-year bachelor's degree in graphic design or communication design and others succeeding despite having no formal training in graphic design. (Anon., 2022)

There are plenty of bachelor's degree programs and even master's degree programs in graphic design, digital media design, and communication design. AIGA, the professional association for design, issued a joint statement with the National Association of Schools of Art and Design stating graphic design students should "make informed decisions about the match between their own educational goals and what programs deliver in actual preparation for performance in the field."

The statement continued that someone who graduated with a bachelor's degree in communication design should be qualified – although there are no guarantees – for many entry-level positions in the field of graphic design. However, the statement continued that one with a bachelor's degree in fine arts or liberal arts would not be considered ready for entry and later upward mobility within graphic design. (Anon., 2022)

There are also plenty of online certificate courses teaching graphic design skills that require varying degrees of commitment to complete. These certificate courses are a great idea even for established Graphic Designers, who would benefit from polishing their skills and learning new graphic design software. (Anon., 2022)

What Is the Role of a Graphic Designer?

Graphic Designers create visual concepts to communicate information. They create everything from posters and billboards to packaging, logos and marketing materials. Graphic Designers use elements such as shapes, colours, typography, images and more to convey ideas to an audience. Graphic Designers can work in-house, creating designs specifically for one brand, or at an agency or as a freelancer, where they work with a variety of clients. (Anon., 2022)

The role of Graphic Designers varies depending on where they work. Some tasks that designers may work on include selecting photos and typefaces, developing, and designing logos. Graphic Designers may specialize in a particular area, such as motion graphics or print media.

Graphic Designers often need to communicate with clients and consumers to develop designs that portray an intended message. They also collaborate with other graphic designers, marketers, business analysts, writers, and programmers to create successful products, campaigns, or websites. (Anon., 2022)

Common Graphic Design Job Description.

Graphic Designers have a range of responsibilities depending on their specialty and workplace. Typically, they will meet with clients or art directors to determine design needs. Using design software, they will combine images, illustrations, and text to bring an idea to life. They may also need to present their ideas and incorporate feedback from colleagues or clients into subsequent drafts. (Anon., 2022)

A typical Graphic Designer job description may include some of these responsibilities:

- Study design briefs and determine requirements.
- Advise clients on strategies to engage target audiences.
- Identify the best ways to illustrate and communicate clients' vision while complying with design best practices.
- Create designs using illustration, photo editing and software.
- Select colors, images, typography and for communication materials, including websites, logos, signs, books, magazine covers, annual reports, advertisements, and social media posts
- Illustrating concepts by designing rough drafts of art arrangement, font size, and style, and submitting for approval
- Produce drafts for client review and make revisions based on feedback received
- Collaborate with clients, Art Directors, and creative team members such as marketing, sales, and business operations, throughout the various phases of a project to determine project scope and deliverables
- Use digital graphic design software to create graphic images and design that communicate company messaging and achieve artistic or decorative effects, including a selection of colors, images, and fonts
- Communicate designs and concepts to clients or Art Directors before incorporating their recommended changes into revised designs
- Testing graphics across various media

- Amending designs based on client and stakeholder feedback
- Ensuring final graphics and visually appealing and on-brand
- Review final graphic designs for errors before publishing
- Keep up-to-date with the latest design trends, tools, and technologies (Anon., 2022)

Once identified responsibilities about graphic designer and key task by project started by research about sustainable agricultural system and solutions for it. By discussing team and the Project manager by Project Kik off meetings got and identified what have to done for promotion campaign by graphic designer.

In adherence to a meticulously crafted work plan and process, the graphic designer assumes a pivotal role in the overarching project of introducing and promoting Bio Bloom Wormy Compost Liquid Fertilizer. From initial project briefing to final delivery, the designer navigates through an intricate journey of understanding project objectives, conducting in-depth research on sustainable agriculture practices, and collaborating closely with the content team. (Anon., 2022)

s the graphic designer executes visually appealing graphics for diverse platforms, feedback and revisions become integral, shaping designs to enhance visual impact and alignment with project goals. The collaborative spirit extends to coordination with the multimedia team, contributing design assets and ensuring visual consistency. Thorough quality assurance checks guarantee that the visuals not only meet design standards but also effectively communicate key messages. The finalization and delivery stage marks the culmination of this creative journey, with the graphic designer delivering polished design assets for seamless integration into the comprehensive multimedia solution. In essence, this collaborative and iterative approach ensures that the graphic designer's contribution resonates cohesively with the broader narrative, effectively conveying the significance of sustainable agriculture and promoting the Bio Bloom Wormy Compost Liquid Fertilizer initiative. (Anon., 2022)

Reason for choosing above colours:

6.2.2.2.2 .Colour pallet

Color pallert choosen by graphic designer.

6.2.2.2.3. Typography

Selecting a font

The font we use is Roboto, which is an open source, cost-free typeface developed by Google. Roboto is specifically designed for use on screen and has been designed to balance content density with reading comfort.

As a web-friendly font Roboto renders well on modern browsers and also performs on older versions to ensure maximum quality in the display of text for users. (Marek, 2022)

Design theory

Roboto comes in a large variety of weights for maximizing options on textual and establishing an effective visual hierarchy. The font demonstrates humanistic qualities through the use of rounded letterforms and strong calligraphic shapes which makes it easy to read both on screen and in printed materials.

Usage

Roboto is the only font used on mygov.scot and gov.scot websites. Definition and visual hierarchy is achieved through the use of typographic styles which use size and weight (character density) to define levels of content in the hierarchy. (Marek, 2022)

Text color

- Darkest Grey #333333 (RGB: 51, 51, 51)

Default width

- Mobile - 6 units, full width (320px - 749px)
- Tablet - 10 units, centered (750px - 969px)
- Desktop - 8 units & 4 units sidebar, left aligned (>970px)

Sizing

There are two sets of sizing based on the screen size of the device used to access the site:

- Mobile (320px - 749px)
- Tablet (landscape) and desktop (>970px)

Styles

Use sentence case for headings and apply headings consistently to create a clear hierarchy of content.

See examples of the typography styles adopted for the mygov.scot and scot.gov sites below:

Font smoothing

To ensure best font weight appearance, we use font smoothing. This delivers a truer and more legible interpretation of a font-set across macs, and is more consistent with PC display in terms of weight. We achieve that with the following CSS. (Marek, 2022)

```
{ -webkit-font-smoothing: antialiased; }
```

A comprehensive list of our typography styles including lists, notes, forms and multi-page guide formats is available in the mygov.scot typography styles guide in the resources section. (Marek, 2022)

Accessibility

As a sans-serif font, Roboto uses simplified characters which stand apart from each other and appear easier to read for users with dyslexia and visual impairment.

The typographic styles we have developed include a minimum size of 16 pixels on main page content to ensure legibility and enable users to zoom content as per the WC3 standards (up to 200%). Type styles also adhere to additional accessibility guidance including maximum line length, the use of standard leading (space between lines of text) and kerning (space between characters (Marek, 2022)

Images

Most of the images taken by photoshoot. Some images taken by shuteerstock.com by graphic designer by paid account.

Concept

All the concept finalizing with under team for matching with the project goal and objectives.

6.2.2.2.4. Design Elements

Line

line is an element of art defined by a point moving in space. Lines can be vertical, horizontal, diagonal or curved. They can be any width or texture. And can be continuous, implied, or broken. On top of that, there are different types of line, aside from the ones previously mentioned. For example, project manager could have a line that is horizontal and zigzagged or a line that is vertical and zigzagged. Different lines create different moods, it all depends on what mood project manager are using a line to create. (Fanning, 2022)

Similarly stars in a constellation connected via imaginary lines are a natural example of using lines in a composition.

Lines are more than just dividers -- the right lines can convey movement and emotion, tying together project manager composition and making it looked polished and professional. (Fanning, 2022)

Shape

A shape is defined as a two-dimensional area that stands out from the space next to or around it due to a defined or implied boundary, or because of differences of value, color, or texture.

For example, a square that is drawn on a piece of paper is considered a shape. It is created with a series of lines which serve as a boundary that shapes the square and separates it from the space around it that is not part of the square. (Fanning, 2022)

Types of shapes

Geometric shapes or mechanical shapes are shapes that can be drawn using a ruler or compass, such as squares, circles, triangles, ellipses, parallelograms, stars, and so on.

Organic shapes are irregular shapes that are often complex and resemble shapes that are found in nature. Organic shapes can be drawn by hand, which is why they are sometimes subjective and only exist in the imagination of the artist.

Curvilinear shapes are composed of curved lines and smooth edges. They give off a more natural feeling to the shape. In contrast, **rectilinear shapes** are composed of sharp edges and right angles, and give off a sense of order in the composition. They look more human-made, structured, and artificial.

Artists can choose to create a composition that revolves mainly around one of these styles of shape, or they can choose to combine both.

Shapes: they're not just for preschoolers! A shape can be loosely explained as anything defined by boundaries. There are two categories of shapes to consider:

Geometric shapes, which are defined by perfect, uniform proportions (such as a circle, square, triangle), and **organic shapes**, which have less well-defined edges, free-flowing proportions, and essentially no rules (such as wiggly, blob-like things that don't fit into any real category). (Fanning, 2022)

When working on a design, consider both the shapes deliberately incorporating (the positive shapes), *and* the shapes naturally formed around those shapes (the negative shapes).

Perhaps the most famous example illustrating the distinction of positive and negative shapes is Rubin's vase. Developed in 1915 Danish psychologist Edgar Rubin, this now-ubiquitous optical illusion shows two completely different images when the negative shapes are viewed vs. when the positive shapes are viewed. (Fanning, 2022)

Form

Form is a three-dimensional object with volume of height, width and depth. These objects include cubes, spheres and cylinders. Form is often used when referring to physical works of art, like sculptures, as form is connected most closely with three-dimensional works

When a shape acquires depth and becomes three-dimensional, then it takes on form. For example, a circle is a shape. Corresponding forms can be cylinders and spheres. A triangle is a shape which can be a pyramid as a form. In addition to geometric forms, there can also be amorphous forms.

As a photographer one needs to think about how a 3-dimensional object can be captured on a 2 dimensional screen or piece of flat paper, but still be obviously 3 dimensional. Remember that photography means painting with light. The trick is to pay attention to the light and shadows. Back lighting is most likely to create an image of a shape. Side lighting is more likely to create more light and shadowed areas on the object, which provides more scope for enhancing the form.

Check the 2nd picture below to see the effect of shadows, even though the day was overcast and rainy. (Fanning, 2022)

In sculpture, form is of the utmost importance, though it can easily be introduced into drawing and painting using techniques. Baroque sculptor Bernini was a master of form, carving his sculptures in a way that gave enjoyment from any perspective. Form is also a big consideration in architecture, with acclaimed architects like Frank Lloyd-Wright, Zaha Hadid Zaha Hadid, and Tadao Ando giving careful consideration to this element in their designs. (Fanning, 2022)

Space

Here's a quick quiz: empty space in a photograph is a) good b) bad. The answer is sometimes a, sometimes b, depending on project manager subject and scene. But the reason I asked project manager that question is because a common mistake among hobby photographers is in neglecting empty space altogether, all the time. The truth is that empty space can be a very effective compositional tool; the trick is in learning when to use it, and when not to.

Space can be understood as that part of project manager photograph that exists around a subject, usually the part of the frame that's empty or filled with a vast expanse of sky, water or some other simple background element that doesn't have a lot of distracting elements of its own. Second, it can be used to describe the way in which project manager foreground and background combine to create an image that has depth. (Fanning, 2022)

First let's talk about positive and negative space. The first myth to dispel when talking about space is that negative space--the empty area around project manager subject--equals a boring photograph. In fact, negative space can actually draw project manager viewer's attention to a subject, as well as invoke varying emotions. Depending on the setting, those emotions can range from feelings of isolation to feelings of joy, or even a sense of opportunity. Additionally, when project manager separate project manager subject from a cluttered background project manager are simplifying project manager image, thereby making it more compelling. A simpler picture often has more impact. We often see something that catches our eye and we want to take a picture. Our brain filters out the irrelevant details, but the film in the camera or the sensor does not do this, since it does not know what project manager think is special. (Fanning, 2022)

In order to get the viewer to see what project manager want them to concentrate on, project manager can move in close, use a shallow depth of field to blur the background, or angle the camera so that there is mostly sky or water around project manager subject, or that the background is less cluttered and far enough from the subject to simply provide some soft color, etc. Remember, very often less is more effective. (Fanning, 2022)

Tactile texture, also known as "actual texture", refers to the physical three-dimensional texture of an object. Tactile texture can be perceived by the sense of touch. A person can feel the tactile texture of a sculpture by running their hand over its surface and feelings its ridges and dents.

Visual texture, also referred to as "implied texture", is not detectable by our sense of touch, but by our sense of sight. Visual texture is the illusion of a real texture on a two-dimensional surface. Any texture perceived in an image or photograph is a visual texture. A photograph of rough tree bark is considered a visual texture. It creates the impression of a real texture on a two-dimensional surface which would remain smooth to the touch no matter how rough the represented texture is. In order to create a sense of texture in a picture it is important to pay attention to the direction of the lighting of the subject. Front and back lit subjects are less likely to result in a picture with a high degree of apparent texture. Side lighting is typically the best choice, taking care to explore small changes in the angle of the camera to the subject. As noted in the following picture project manager can also have reflected light helping to create shadows to boost the impression of a textured surface. (Fanning, 2022)

Tone

When talking about photography the term tone refers to the overall range of lightness and darkness, and color variation within an image. Also often referred to as ‘value’ the tone of an image can have a drastic effect on how an image ‘feels’; Images containing many dark tones often appear dramatic and sad while images featuring light tones appear happy and vibrant. juxtaposition between image subject and tone can be used to create jarring and powerful images. The difference between the lightest and darkest tones within an image is referred to as ‘Dynamic-Range’.

Tone is incredibly powerful. It is a large part of what sets the mood of the final image. (Fanning, 2022)

Tones in Colour Photography

In black and white photography, the tones are a lot more obvious since it changes the photo to sepia and white or another color and white. However, that doesn’t make the toning of color photography, even though it is subtler, any less powerful. With color photography, it all comes down to enhancing the mood and meaning of the image.

As graphic designer thinking about tones, start with warm and cool colors, and think about their properties. Warm colors reds, yellows, oranges and browns can lend a variety of different feelings to an image, ranging between excitement and welcoming warmth. Cool colors, like green, blue, and violet, on the other hand, tend to be more relaxing and refreshing, although blue can be used to indicate sadness.

Color tones can be broken down even deeper than that, however. As project manager are choosing a tone, it helps to think about the psychology behind colors — in other words, how colors affect people. Here is a quick list of the meaning of various colors to help project manager choose the perfect tone: (Fanning, 2022)

- Red is a rare color to use as a cast in a color image, but it has been done before. In general, red has warmth and energy to it, and it can also be used to convey a sense of strength or danger. When project manager see a red color cast, most often, it will be a shade that trends towards brown.
- Orange tones make people think of comfort good food, warmth and a sense of security.
- Yellow is a commonly used tone, and in fact, it is the tone that get when take photographs as the sun is getting ready to set for the day that rich, golden color that makes everything seem more cheerful.
- Green is the color of harmony. It tends to make people feel refreshed, so when project manager add a green cast to an image, make sure that the subject material matches the fresh and tranquil tone graphic designers' chosen.
- Blue is likely the most versatile color. Depending on designersubject material, it can indicate serenity or tranquility. Because it is such a chilly color, however, it can also lend a depressing sort of feeling to project manager images.
- Violet tends to make images feel more authentic, and with certain subject material, the image may see more upscale or luxurious. In fact, in monochrome photography, this hue is popular since it conveys a sense of grandeur or motion.

Be aware that shifts in shade mean a lot, too. For instance, a red that trends toward brown, a completely brownish cast, or a yellow-green colour can all give the image a completely different feeling than their parent colours will. (Fanning, 2022)

Tones in Black and White Photography

As mentioned before, when it comes to tones in monochrome photography, they tend to be a lot more obvious. There are also three ways to add tones to project manager monochrome images: Add the colour to the lightest areas of the photograph, keeping designer blacks, black, change the colour of the blacks and middle tones while leaving the highlights alone, or tone all the colours across the range.

When it comes to colours, there are several popular options. For instance, sepia is used to soften the image, or to make the image resemble an old-fashioned photograph. If project manager browses sepia photos, notice that some trend more towards black, with brownish highlights, while others are sepia all the way through.

6.2.2.2.5 Designs

Logo Design

Designing a logo for a child donation foundation requires a thoughtful and compassionate approach to visually represent the organization's mission. The logo should evoke a sense of warmth, care, and hope. Imagery such as a small hands and heart-shaped symbol can convey the nurturing aspect of the foundation. Bright and cheerful colors, like soft blues, pink, and red, can create a positive and uplifting atmosphere. . The typography should be friendly and easily readable, conveying a message of sincerity and transparency. Ultimately, the logo should not only capture the essence of the foundation's dedication to supporting children but also resonate with the empathy and generosity of potential donors.

Sketching

Logo type : Mascot logo

BRAND TYPOGRAPHY : Ubuntu

Software used – Adobe illustrator 2024

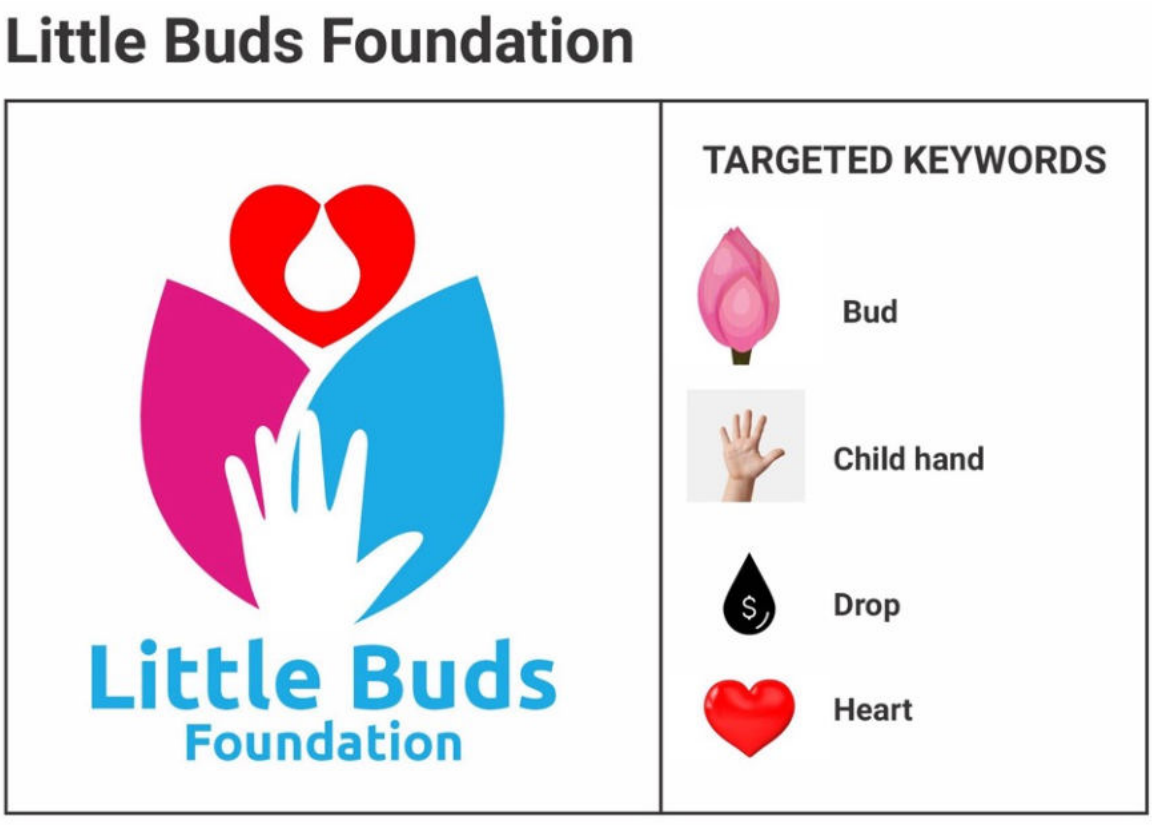

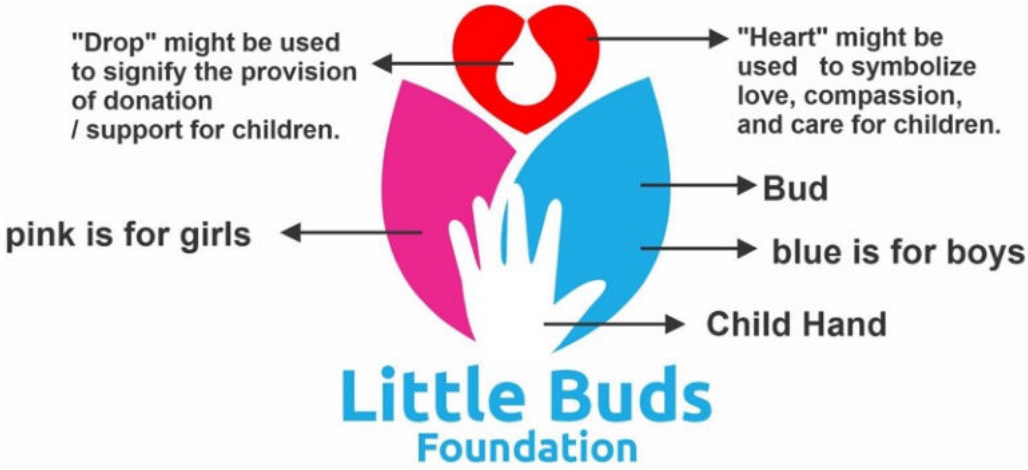

Figure 44- Logo

Used colours

Red is often associated with passion, love, and warmth. It can evoke strong emotions and a sense of urgency.

Pink :
pink was a softer and more delicate color suitable for girls, while blue, being associated with the color of the sky, was seen as more appropriate for boys.

Sky blue:
Sky blue is often associated with tranquillity, peace, and a sense of calmness. It represents the sky and open space.
Including sky blue in foundation's colors can convey a message of providing a safe and peaceful haven for children. It may also represent hope and a bright future for the children.

Photoshooot

Photographs of some children in poverty-stricken areas were taken with the permission of their parents. All these photographs will be used on social media, websites and other print media

Social media post

A variety of designs have been designed to reach out to a target audience through social media sites, with powerful captions and children's photos as expressive faces.

Eye-catching designs can easily reach customers with concise messages and convey the message easily. By using RGB colors the digital screen gets an attractive design and by using Bold font it can display things clearly.

15 types of post are created to reach a large number of audience

Software used – adobe photoshop 2024 / coreldraw 2023

DL pamphlet

Designing a compelling pamphlet involves a thoughtful combination of visual aesthetics and informative content to effectively convey a message. The layout should be clean and organized, with attention-grabbing images and colors that align with the overall theme. Start by defining a clear hierarchy for the information, ensuring that key points stand out. Use a mix of fonts to add variety and emphasis, but maintain readability. Incorporate engaging graphics or illustrations to visually enhance the content. Make sure the text is concise and easy to understand, providing essential details without overwhelming the reader.

The leaflet was created with the brand logo and photo of the child and attention-grabbing captions. Different colors has been used to refer to children with different types of different needs. Bolt fonts is used to make it easy to read and understand.

Software used : adobe photoshop 2024 / coreldraw 2023

A3 Poster

Designing a poster for a child foundation demands a careful balance of playfulness, empathy, and information. Begin with a vibrant color palette to evoke a sense of warmth and joy, appealing to the childlike innocence of the audience. Incorporate child-friendly fonts and whimsical graphics to maintain a lighthearted tone. Clearly communicate the foundation's goals and initiatives in a concise and accessible manner, utilizing a mix of text and visuals. Include website and contact information and a compelling call-to-action, encouraging viewers to support the cause or get involved. Overall, the poster should evoke a sense of compassion and inspire individuals to contribute to the well-being and development of children through the foundation's endeavors.

Software used : coreldraw 2023

Billboard

Crafting a Billboard for a child foundation necessitates a visually striking and emotionally resonant design. Begin with a large, heartwarming image that features the faces of children, emphasizing the positive impact of the foundation's work. Use vibrant and cheerful colors to grab attention and convey a sense of hope. Implement bold, easy-to-read fonts to ensure the key message is legible from a distance. Incorporate concise yet impactful text that communicates the foundation's mission and encourages support. To evoke empathy, consider integrating a compelling tagline that tugs at the heartstrings, emphasizing the importance of nurturing the well-being of children. Include the foundation's logo prominently, ensuring brand recognition. Ultimately, the Billboard should serve as a powerful visual testament to the foundation's dedication to improving the lives of children, compelling passersby to take action and contribute to the cause.

Software used – adobe photoshop 2024 / coreldraw 2023

Products

Products are designed to be sold online. The profits from the sale of these products are used for children. These products will be sold at reasonable prices so that everyone can buy. These products are designed to include the Child Foundation logo and website address

Software used – adobe photoshop 2024 / coreldraw 2023

Animated GIF

Creating an animated GIF for a child's foundation involves infusing warmth and compassion into a concise visual narrative. Keep the message clear and focused, and ensure the GIF is optimized for online platforms where it can be easily shared to raise awareness and support for the Child Foundation's initiatives.

6.2.2.3 Web Designer and Developer Role

Under Web designer and developer job role below task and duties under “Hope for tomorrow ‘project assigned by Project manager.

- Research
- Research about Job roles
- Research about Initial website designing and development
- Project kickoff meeting with PM and team
- Idea generating and requirement gathering
- Sketching and wireframing
- Approval from PM
- Web page designing
- Getting approval from PM for design and fixing
- Overall website development
- Getting approval from PM for design and fixing
- Bug fixing
- Final product demo

Under this firstly done deep research about web design and developer role duties and responsibilities by IdeaHub team’s Web designer and developer.

6.2.2.3.1.Research about web design and development role

Web designer and developer will be involved in the technical and graphical aspects of pages and will determine the look of the website as well as how it works. Web designer and developer may also be responsible for the maintenance of an existing site.

The term web developer is sometimes used interchangeably with web designer, but this is misguided. Web developing is a more specialist role, focusing on the back-end development of a website, using programming languages to make the web design a reality that works well.

The growth in touchscreen phones and tablet devices has dictated a new way of designing websites, with the web designer needing to ensure that web pages are responsive no matter what type of device is being used. Therefore, the need to test websites at different stages of design and on a variety of devices, has become an important aspect of the job. (prospects.ac.uk, 2022)

Responsibilities

- Meet clients to identify their needs and liaise regularly with them
- Draw up detailed website specifications
- Design sample page layouts including font, text size and colours
- Design graphics, animations and manipulate digital photographs
- Register web domain names and organise the hosting of the website
- Present initial design ideas to clients
- Carry out coding using a variety of software
- Work with different content management systems
- Consider search engine optimisation (SEO)
- Meet relevant legal requirements such as accessibility standards, freedom of
  - information and privacy
- Design the website's visual imagery and ensure it's in line with company branding
  - policy or the requirements of the client
- Proofread content and make changes where necessary
- Edit content, debug code and re-design web pages
- Work with other web specialists, including web developers and graphic designers
- Liaise with outside agencies
- Test the website to ensure it's working
- Hand the completed website over to the client
- Provide post-sales technical support
- Train the clients' staff
- Research current design trends.
- Writing and reviewing code for sites, typically HTML, XML, or JavaScript
- Integrating multimedia content onto a site
- Testing web application
- Troubleshooting with performance or user experience

Technical skills

- Coding: Common programming languages include HTML, PHP, cascading style sheets, and JavaScript for front-end design. Consider learning Python, Java, or Ruby if you want to do back-end development.
- Responsive design: People use a variety of devices to view websites. Developers should be able to create sites that look as good on smartphones and tablets as they do on computer screens.

- Technical SEO: Many factors of website design can affect the site's search engine ranking. Understanding how search engines rank sites is useful in a developer's work.
- Version control: This lets you track and control changes to the source code without starting over from the beginning each time you run into a problem.
- Visual design: Understanding basic design principles, such as how to use white space, choose fonts, and incorporate images could boost your marketability. (prospects.ac.uk, 2022)

Workplace skills

- Communication: Web developers spend time discussing design ideas with their clients and team members through each step of the project.
- Customer service: A web developer creates websites for the client to use and should remain client-focused to achieve the best results.
- Detail-oriented: Little details, like a small change in code, can make a big difference in how a website performs.
- Organization: Keeping track of deadlines, project tasks, workflow, and budgets is helpful if you want to complete a website design on time.
- Problem-solving: Web developers often run into issues when designing websites. They should have the patience and ability to identify problems in the design or coding and solve them in a methodical way. (prospects.ac.uk, 2022)

2. Consider a degree in computer science or web design.

While you don't always need a degree to get a job in web development, it can certainly help. If you're already in school (or considering earning a degree), some majors might be a better fit for your career goals than others. If you're more interested in back-end web development, consider a degree program in computer science. If you feel more drawn to front-end development, you might opt for a degree in web design or user experience (UX). (prospects.ac.uk, 2022)

6.2.2.3.2. Research about Initial website designing and development

The concept of web design and development has been around for about as long as websites have existed. It used to have a much simpler definition because website creation used to be a much simpler process. When you compare the first website, which came out in 1991, to modern websites, you can really see how much websites have evolved. Today, creating and maintaining a website is more complex, and involves an entire ecosystem of roles and skill sets.

For designers, it can be difficult to know exactly where you fit into this ecosystem. This article outlines the major aspects of the website creation process, offering a clear picture of your role, the roles of others, and the skill sets involved. (Anon., 2023)

What is web design and development?

Web design and development is an umbrella term that describes the process of creating a website. Like the name suggests, it involves two major skill sets: web design and web development. Web design determines the look and feel of a website, while web development determines how it functions. (Anon., 2023)

Because there isn't always a hard line that separates the two roles, the titles are often used interchangeably. As the web continues to evolve, so do the roles.

In the almost 30 years since the first website was created, numerous job titles have emerged to describe various skill sets used to create a website, with more coming out every year. These titles often overlap, and their meanings change from company to company. It's enough to make your head spin.

Design vs. front-end development vs. back-end development

To keep it simple, let's separate website creation into two categories: what the users sees, and what the user doesn't see. (Anon., 2023)

What the user sees takes place in a browser and involves design and front-end development. Design defines a website's colors, layout, font, and images—all the stuff that goes into a website's branding and usability—and requires tools like Photoshop, Illustrator, Fireworks, and Sketch.

Using coding languages like HTML, CSS, and Javascript to implement that design is called front-end development. These languages make it possible for users to interact with buttons, images, text, contact forms, and navigation menus. And they're integral to responsive and adaptive design.

Some designers code and some front-end developers design. Some designers don't touch a piece of code. And some front-end developers stick to coding and nothing else. Helpful, right?

What the user doesn't see takes place on a server and involves back-end development.

A website needs a back end to store and organize all the data that comes through the front end. So if a user buys something or fills out a form, they're entering information into an application on the front end of the website. And that information is stored in a database that lives on a server. (Anon., 2023)

A website works the way you want it to because the front and back ends of a website are always communicating. A back-end developer is like the conductor. They make sure applications, databases,

and servers work together harmoniously using languages like Ruby, PHP, .Net, and Python along with frameworks like Ruby on Rails and Code Igniter.

Elements of web design

In his essay, The Politics of Design, the iconic designer Paul Rand wrote, “Design is a problem-solving activity. It provides a means of clarifying, synthesizing, and dramatizing a word, a picture, a product, or an event.”

Web designers are constantly solving problems for their users. Websites should make it easy for users to go where they want to go and do what they want to do. A frustrated user is less likely to stick around, let alone come back to a website. (Anon., 2023)

That’s why each web design element is in service of making the website as easy to use as possible: so people visit and interact with the website over and over again.

Layout:

The layout is the arrangement of a website’s header, navigation menu, footer, content, and graphics. The layout depends on the website’s purpose and how a web designer wants the user to interact with the website. For example, a photography website would prioritize big beautiful images, while an editorial site would prioritize text and letter spacing. (Anon., 2023)

Visual hierarchy:

A user should be able to access the information they need by glancing at a website. This is where visual hierarchy comes in. Visual hierarchy is the process of determining which aesthetic aspects of the website should stand out using size, color, spacing, and more.

The headings in this article are a basic example of visual hierarchy. They quickly let you, the reader, know what this article is about. (Anon., 2023)

Navigation:

Navigation helps a user get from point A to point B using navigational tools like site architecture, menus, and search bars. Simple, effective navigation helps users find the information they’re looking for quickly and easily. (Anon., 2023)

Color:

Color gives a website personality, makes it stand out, and shows the user how to take action. The color palette might be determined by a brand’s existing identity or by the content of a website (like how this plant website uses hues of green). A consistent color palette helps give order to a website

Once all research, requirement gathering and project kickoff meeting done with team according to the project plan website designing started by IdeaHub solution team’s Web designer and develope

6.2.2.3.3.3 Overall evaluations

The website of the "Little Bud Foundation" is designed to serve as an offering of optimism and support to children who are confronted with serious difficulties arising from financial hardships and other misfortunes. A virtual haven has been created by client website, dedicated to addressing the urgent problems that impact the lives of children in Sri Lanka. where basic necessities such as food, education, healthcare, and a secure living environment are challenging for many families to meet, the Little Bud Foundation emerges as a humanitarian force committed to nurturing the potential of every child.

The challenges faced by children in marginalized areas in Sri Lanka are indeed all too real. It is becoming increasingly difficult for financially struggling families to fulfill their fundamental needs.

Objectives

- Partnerships with national and international organizations, non-governmental organizations, and governmental agencies are to be created to maximize combined efforts in tackling the more extensive issues that kids in poverty confront.
- Educate people about the important concerns affecting the welfare of children from backgrounds of poverty.
- Organize activities for fundraising and online donations to raise money to support the Little Buds Foundation.
- Create and distribute educational information on the website to increase public understanding of child rights, the value of healthcare and education, and the wider effects of helping impoverished children.

Challenges

The creation and design of the website will be important in addressing the many problems that underprivileged kids must deal with. Establishing mutually beneficial relationships with non-governmental organizations, governmental agencies, and national and international organizations is the Little Bud Foundation's foremost objective. Through this partnership, we hope to amplify combined influence in addressing the more general issues that negatively impact the lives of impoverished children. The website is intended to be a smooth means of facilitating the formation of these partnerships by offering a virtual forum for stakeholders to convene and offer their knowledge, assets, and assistance. Recognizing the complexities of the problems encountered by children living in poverty and utilizing their strengths are equally challenging endeavors.

Key Features

- To provide an easy and pleasant user experience for visitors of all statistics, an intuitive interface will be built.
- To offer usability throughout desktops, laptops, tablets, and smartphones, a responsive design will be implemented position.
- To make it simpler for supporters to make donations online and support the foundation's employment, a safe and user-friendly donation site will be incorporated.
- To promote accountability and trust, the Little Bud Foundation will give clear and comprehensive reports on the distribution of funding, program results, and overall development.
- Clear and open contact data, support channels, and a committed section for as often as possible inquired questions (FAQs) will be included to help visitors in engaging with the foundation.
- The security of online transactions will be prioritized by executing secure installment preparing frameworks for gifts and any other budgetary exchanges.
- Search engine optimization of the website will increase visibility and reach, making it accessible to a wider audience to find out about and support the Little Bud Foundation.

Technology Requirements

By incorporating the mentioned technological criteria, the infrastructure and tools required for the "Little Bud Foundation" website to successfully carry out its objective and interact with its audience in a safe and effective way will be obtained.

- The greatest potential website speed, stability, and security will be ensured by searching for a reliable hosting provider.
- implement a responsive web design framework to make sure the website works well on PCs, laptops, tablets, and smartphones, among other devices.
- To enable safe and effective online donations, a secure payment gateway will be integrated, guaranteeing adherence to industry standards for financial transactions.
- The integration of Application Programming Interfaces (APIs) across social media platforms would enable the smooth exchange of content and audience engagement across several social channels.
- The website will be created in accordance with industry best practices and web standards, 5guaranteeing interoperability with several browsers.

Scope

The development of the "Little Bud Foundation" website is currently underway, encompassing a broad spectrum of topics aligned with the organization's goals and objectives. The primary goal is to establish an internet-based forum that serves as a ray of hope and assistance for Sri Lankan kids, especially those who are faced with substantial obstacles due to financial limitations and other misfortunes. The website is intended to be fashioned as a virtual haven for neighborhood children, with urgent issues that impact their lives being addressed and the harsh realities of the challenges faced by children in underprivileged areas being acknowledged.

With a focus on financial struggles and the challenges families encounter in providing for their children's fundamental requirements, a caring force is sought to be established by the website, dedicated to fostering each child's potential. Cues are taken by the foundation from prestigious institutions such as UNICEF and the government of Sri Lanka, which emphasize the pressing need to address the growing number of children who lack the necessities for a happy and healthy childhood.

The main goal is for the digital sphere to be used as a catalyst for positive change by harnessing its potential. This involves raising awareness, coordinating efforts, and cultivating an international sense of community. The aim of the website is to close the gap between those in need and those with the means to provide assistance by bringing together stakeholders, organizations, and kindhearted people to work together to improve the lives of Sri Lanka's young people.

A number of carefully crafted projects, programs, and campaigns will be encountered by users as they browse the website, all of which are intended to have an apparent impact on the lives of these kids. The objective is to create a more promising and better future for the younger generation by tackling the various difficulties they encounter, including healthcare programs, assistance for their education, and more.

One important component of the definition is the encouragement to become a part of the project and sow the seeds of hope in the new blossoms' hearts. Regardless of the difficulties they encounter, every child should be able to grow and thrive in an environment of love, according to the website. In the end, the development scope is focused on building a digital environment for the Little Bud Foundation where action and compassion collide, and each child's potential is valued and encouraged.

Methodology

- To discover best practices and cutting-edge elements, the websites of prosperous NGOs, child welfare programs, and comparable philanthropic organizations will be investigated.

- To obtain an idea of how the website will be laid out, navigated, and utilized, wireframes and design prototypes will be created. Ensuring that the design reflects the branding and core principles of the foundation is a key consideration in this process.
- The development phase will be initiated, adhering to coding standards that utilize HTML5, CSS, JavaScript, and the Bootstrap framework for best practices. The basis for developing unique features, modules, and functionalities will be the outlined criteria and design specifications.
- A responsive design will be employed to ensure the website works and is readable across a range of devices, including tablets, smartphones, laptops, and desktop computers.

Technologies & Resources

Technologies used

Figma 107.0. 0. 2021

The Little Bud Foundation website's design process is expedited with the help of Figma, a collaborative design tool. Real-time creation, sharing, and iteration of user interfaces and prototypes is made possible for designers. The collaborative features of Figma guarantee a coherent design process and enable effective teamwork.

Adobe Illustrator

The Little Bud Foundation website's design process is expedited with the help of Adobe Illustrator, a collaborative design tool. Used for create low fidelity wireframe.

Illustrator CS6, Adobe introduced Illustrator CC as it became part of the Creative Cloud. The current version is Adobe Illustrator CC 2020.

Adobe Illustrator is a software application for creating drawings, illustrations, and artwork using a Windows or MacOS computer. Illustrator was initially released in 1987 and it continues to be updated at regular intervals, and is now included as part of the Adobe Creative Cloud. Illustrator is widely used by graphic designers, web designers, visual artists, and professional illustrators throughout the world to create high quality artwork. Illustrator includes many sophisticated drawing tools that can reduce the time need to create illustrations. (What is Adobe Illustrator, 2022)

Visual Studio Code - Version 1.85

Visual Studio Code is a code editor in layman's terms. Visual Studio Code is "a free editor that helps the programmer write code, helps in debugging, and corrects the code using the IntelliJ-sense method".

In normal terms, it facilitates the user's ability to write the code easily. Many say it is half an IDE and half an editor, but the decision is up to the coders. Any program/software we see or use works on the code running in the background. Traditionally, coding was done in traditional or basic editors like Notepad! These editors used to provide basic support to the coders. (Pedamkar, 2023)

Bootstrap 5

Bootstrap is an open-source that helps with the website development and is open for use for everyone. It helps with designing responsive websites, has a modern interface, and appears professional. Recently, it was upgraded to the Bootstrap 5 version. It launched Bootstrap 5 alpha in June 2020 after months of refining processes. But, the Bootstrap 5 development team informed that it is still in its alpha version. Therefore, the developers can expect breaking changes in the version until the first beta version is released. Bootstrap is originally a blend of CSS and JavaScript code that can use to create dynamic websites. It is an efficient tool for front-end design that consists of HTML and CSS design templates. These include components like forms, buttons, navigations, modals, typography, and other interface elements. All these can be established using JavaScript extensions. (TECHNOSYS, 2021)

JavaScript

JavaScript is a lightweight programming language commonly used by web developers to add dynamic interactions to web pages, applications, servers, and even games. It works seamlessly alongside HTML and CSS, complementing CSS in formatting HTML elements while providing user interaction, a capability that CSS alone lacks. JavaScript's widespread applications in web, mobile app, and game development make it a valuable language to learn. (A., 2023)

Hardware Requirement

- Gaming Laptop with windows 10 (64-bit operating system, x64-based processor)
- Intel(R) Core (TM) i7-7700HQ CPU @ 2.80GHz 2.80 GHz installed Ram 16GB
- SSD -128GB ON900 M.2 NVME
- Screen Resolution 1920 x 1080
- Mobile Phone Camera Huawei nova 9 SE

6.2.2.4 Audio Specialist Role

Under audio specialist job role below task and duties under Hope for tomorrow “project assigned by Project manager.

- Brainstorm creative ideas for an engaging audio commercial aligned with project goals.
- Collaborate with the Project Manager and team to align on objectives and integration.
- Practice and rehearse the script for a natural and engaging delivery, seeking feedback for improvement.
- Create and implement sound effects that enhance the audio content's emotional impact.
- Operate recording equipment for high-quality sound capture in diverse scenarios.
- Record and edit voiceovers for the commercial, directing talent for the desired delivery and tone.
- Work towards obtaining final approval for the audio component, ensuring it complements the overall project.

Under this firstly done deep research by audio specialist role and the responsibilities by audio specialist.

6.2.2.4.1. Research about audio specialist job role and duties

What Is an Audio Specialist?

Research what it takes to become an audio specialist. Learn about the typical responsibilities, required education and training, as well as the employment
(Anon., 2023)
Audio specialists are experts in creating exciting audio experiences. They use their knowledge of several aspects of sound production to improve audiovisual material and convey meaningful ideas.

The educational journey of an Audio Specialist is diverse, with backgrounds ranging from formal education in audio engineering to hands-on experience in sound design. While some may hold degrees in audio-related fields, others thrive through practical knowledge and a deep understanding of sound technologies.

A wide range of educational programmes appeal to those who want to become Audio Specialists by offering degrees and certificates in audio engineering. Online courses and certificates provide opportunities for both skill enhancement and entry for those entering the field.

Professional associations, such as the Audio Engineering Society (AES), offer valuable guidance for individuals pursuing a career as an Audio Specialist. These associations emphasize the importance of aligning educational goals with the practical demands of the audio industry.

Completing a bachelor's degree in audio engineering or a related field often serves as a key qualification for entry-level positions in audio specialization. The specific educational background plays a pivotal role in determining readiness for the nuanced challenges of the field.

The dynamic nature of audio technology calls for continuous learning. Audio Specialists are encouraged to engage in ongoing skill development to stay at the front of evolving techniques and technologies, ensuring relevance in the ever-changing audio landscape.

Essentially, an audio specialist's work is around mastering audio components to provide memorable aural experiences. The field accepts individuals who have a variety of educational backgrounds, highlighting the significance of making well-informed decisions and demonstrating a dedication to lifelong learning while navigating the exciting and ever-changing world of audio specialization. (Anon., 2023)

Education Required	High school diploma (minimum); certificate, associate's degree or bachelor's degree (recommended)
Education Field of Study	Media arts, audio production, audio technology
Key Responsibilities	Provide, record & create sound; set up sound systems; edit sound clips; perform equipment upgrades
Certification	Voluntary certification available
Job Growth (2020-2030)	17% growth* *(sound engineering technicians)* 11% growth* *(broadcast technicians)*
Median Salary (2020)	$53,520* *(sound engineering technicians)* $43,570* *(broadcast technicians)*

(Anon., 2023) Source: *U.S. Bureau of Labor Statistics

What is the Role of an Audio Specialist?

The job of audio specialists is to provide rich audio environments that efficiently communicate information. They utilize their skills to produce a wide range of audio content, including commercials, podcasts, soundscapes, and more. Audio specialists use audio to convey concepts and messages by using components like music, voiceovers, and sound effects.

The role of Audio Specialists can take various forms, depending on their work environment. Whether working in-house for a specific brand, at an agency, or as a freelancer collaborating with diverse clients, they play a crucial role in shaping the auditory identity of projects.

Audio Specialists engage in tasks such as selecting appropriate sounds, creating soundscapes and creating audio components. Specializations within the field may include expertise in areas like sound design for visual media or creating compelling audio narratives.

Effective communication is a key aspect of an Audio Specialist's role. They interact with clients and end-users to understand the intended message, changing their audio creations accordingly. Collaboration is a common theme, as Audio Specialists work with fellow professionals such as graphic designers, marketers, writers, and programmers to ensure the seamless integration of audio into diverse products, campaigns, or websites. (Anon., 2023)

Common Audio Specialist Job Description:

According to their area of expertise and workplace, audio specialists handle a range of tasks. Generally, they engage in discussions with clients or project leaders to identify audio requirements. They combine various sound elements, such as music, effects, and voiceovers, using specialised audio equipment and software to give shape to imaginative thoughts. The presentation of their ideas and the integration of feedback from collaborators or clients into subsequent iterations are also essential components of their role.

A typical Audio Specialist job description may include some of these responsibilities:

• As the Little Hearts Foundation project's audio specialist, the project manager has been given the following tasks and responsibilities for the "Hope for Tomorrow" donation campaign:

• Examine the challenges of child deprivation in Sri Lanka, understanding the critical role of audio in conveying impactful information.

• Collaborate with the Project Manager and the team to brainstorm creative ideas for an emotionally engaging audio commercial aligned with the campaign's goals.

• Work closely with the creative team to craft a compelling script that highlights the urgency of tackling child deprivation.

• Rehearse and refine the script for a natural and heartfelt delivery, actively seeking feedback for improvement.

• Create and implement heartfelt sound effects that amplify the emotional impact of the audio content.

• Skillfully operate recording equipment to capture high-quality sounds, adapting to various scenarios.

• Record and edit voiceovers for the campaign, and talent is directed to get the appropriate tone and delivery.

• Work towards obtaining final approval for the audio component, making sure that it aligns with the campaign’s overall vision of the "Hope for Tomorrow" campaign to address child deprivation in Sri Lanka.

According to this first thorough research, the role of the audio specialist and their responsibilities are as follows:

In the context of the project, the audio specialist plays a crucial role in enhancing the sensory experience and reinforcing the project's message. The journey begins with a comprehensive understanding of the project's objectives, followed by extensive research on the soundscapes associated withprojects. (Anon., 2023)

The audio specialist collaborates closely with the content team to create an auditory narrative that complements the visual and textual content. This involves the creation of sound effects, background scores, and voiceovers that align with the project's theme and objectives. Feedback and revisions are integral to this process, ensuring that the audio elements enhance the overall impact and align with the project goals. (Anon., 2023)

The audio specialist also coordinates with the multimedia team, contributing audio assets and ensuring auditory consistency across platforms. Rigorous quality assurance checks ensure that the audio not only meets technical standards but also effectively communicates key messages. (Anon., 2023)

The finalization and delivery stage marks the end of this creative journey, with the audio specialist delivering polished audio assets for seamless integration into the comprehensive multimedia solution. In essence, this collaborative and iterative approach ensures that the audio specialist's contribution resonates cohesively with the broader narrative, effectively conveying the significance of sustainable agriculture and promoting the Bio Bloom Wormy Compost Liquid Fertilizer initiative. (Anon., 2023)

What Is the Job Outlook for This Career?

According to the U.S. Bureau of Labor Statistics (BLS), there were 138,700 jobs held by broadcasting and sound engineering technicians in 2020 (www.bls.gov). The BLS expected job opportunities for broadcast and sound engineering technicians to grow 21% from 2020-2030. This growth percentage is considered to be much faster than the average. Competition for jobs was expected to be high for television and motion pictures positions and in large metropolitan areas. (Anon., 2023)

What Are Some Related Alternative Careers?

Electrical and electronics installers and repairers are responsible for installing and repairing utilizes and a range of electronics equipment. They do not need postsecondary training, but learn on the job. Their work is similar to the work of audio specialists because they need to know how to install and maintain electrical equipment. Film and video editors and camera operators also have some similarities to audio specialists, because they may use computer software to arrange visual and audio files to produce a desired effect. Film and video editors and camera operators do need a bachelor's degree; while a bachelor's degree is recommended for audio specialists, it is not necessarily required. (Anon., 2023)

6.2.2.4.2 Research about radio commercial

Radio advertising is a fantastic way to grow business, increase brand awareness and generate sales. If people are interested in finding out the fundamentals to radio advertising, and learn ways to conquer common challenges such as how to choose the correct station, the costs involved, which radio advertising formats will suit brand or how to simply begin the process, got covered. (Anon., 2021)

What is Radio Advertising?

Radio advertising is buying commercials to promote products or services. Advertisers pay commercial radio stations for airtime, and, in exchange, the radio station broadcasts the advertiser's commercial to its listening audience. As a business owner, how can take advantage of radio advertising? How do get target audience to hear radio ad message and follow a certain call to action?

In radio advertising, there are numerous types of commercials that an advertiser can choose, similar to how brands might pursue different print advertising options (newspaper vs. magazine, for example) or online advertising options (email vs. social media). Let's take a look at a few of the more popular types of radio advertisements. (Anon., 2021)

What are the Different Types of Radio Advertising?

There are various types of radio advertising that you can choose from. By identifying and explaining the various types, you are able to gauge which would suit your specific advertising campaigns needs best.

Radio Live reads

A live read is when the radio personality/ DJ reads out your advert live on air. Listeners are already familiar with the radio personality's voice and they are more likely to engage with the advert. Live reads also help your brand stand out from the rest, shining a spotlight on your message. (Anon., 2021)

Radio Sponsorships

This type of ad is for those that are looking for a subtle approach to their radio advert. You can choose to sponsor news, competitions, sports, traffic or any of the regular programming on that particular radio station. Let's look at some advantages of sponsored adverts:

Engagement

The main advantage with a sponsorship advert is the high engagement; especially when it's a sponsored competition where listeners are encouraged to call in to partake and stand a chance of winning cash prizes or other forms of rewards.

Reach

Sponsored ads air first in the commercial break in most cases, which means your advert will reach more listeners before they switch stations. But it isn't often that people change stations, as most listeners tend to be loyal to a particular station. (Anon., 2021)

Radio Jingles

“Ba da ba ba ba, I’m Lovin It!”

You guessed it, McDonalds. Case in point of how a great jingle stays memorable and the listener can easily identify what the brand is. The fact that you read that with your eyes and your mind played the jingle in your head based on memory is just amazing wouldn’t you agree? That connection between music and memory is almost guaranteed, which is why most people gravitate toward this type of radio advert. Ever notice how even the annoying jingles just get stuck in your head and you find yourself humming or singing it throughout the day? The power of radio advertising. (Anon., 2021)

Radio Testimonials

There is something reassuring about hearing other people’s experiences with a particular product or service. Testimonial adverts are exactly that; people giving a real-life account of how they found your product or service. As humans, we feel more comfortable trying something new if someone else has tried it before, because in our minds we know that advertisements are made with the sole intention to make something appealing for you to buy into it. Using testimonial adverts makes the audience more receptive and adds credibility for the brand. (Anon., 2021)

Personified Commercial

Like storytelling, you want the listener to create the whole picture in their minds, get their imagination working. Adding characters that are relatable helps them connect with the story and makes them want to find out what happens next, which means they will have to stay tuned in. Example, a couple is on a road trip, they pull up to a McDonalds drive through and they are discussing what they will order. The voice over artists need to deliver perfectly on the execution, in order for this type of advert to be effective. (Anon., 2021)

Straight Read

This type of radio advertisement usually focuses on the advantages of the brand that is advertising, important information such as how listeners can get in touch with you, address or email or phone details and is generally in a monologue format.

(Anon., 2021)

Why you Should use Radio Advertising

Radio is trustworthy, listeners develop a bond with these radio personalities, they are with them in the mornings on their commute to work, and in the evenings on their way home from a long day. They become that trusty companion and taking advantage of this through advertising can bring great results

for a brand. As a business owner, you might be planning your new marketing strategy and looking for ways in which to increase your brand awareness and sales. Traditional methods of advertising have started to be overlooked due to common misconceptions. Fortunately, we are able to advise on why you should look at radio advertising to achieve your advertising goals.
(Anon., 2021)

How Radio Advertising works for your Business

Radio advertising makes your business memorable

Due to the frequency of a radio ad playing a number of times throughout the day, week, or month, the ad becomes memorable to the listener, and results in your business being top of mind. (Anon., 2021)

Radio ads give your business a personality

Radio ads use one sense; the sense of hearing, which means the listeners have to use their imagination to create a picture of what they are hearing. The better your script is, the easier it becomes for the listener to see the story in their minds and see the personality of your brand in that story. (Anon., 2021)

Results in action

Radio advertising continues to prove an excellent medium for reaching audiences through its high penetration levels and repetition, and because radio ads have a high call to action they generate excellent consumer recall. (Anon., 2021)

Is Radio Advertising Still Effective?

Radio advertising reaches a large, targeted audience. Depending on your chosen station or stations, you are able to effectively reach your targeted demographic.

Cost effective

Considering the lower investment cost when compared to TV and print advertising, statistics show that Radio yields an exceptional return. If people consider the cost of one prime print advert on the front page of a daily newspaper, or the huge cost of even 1 TV ad spot, it becomes clear that unless people have an unlimited budget, radio could be a key asset for business. (Anon., 2021)

High repeat and recall

A key aspect of successful advertising is being able to repeat message often and create high recall and memorability. Radio allows for both. Again, due to radio advertising's cost effectiveness, repeating a

message frequently enough is not out of reach of most advertisers. And the ability to do this leads to extremely high recall levels for the associated investment. (Anon., 2021)

Highly segmented offering

Instead of spraying your message everywhere and hoping it reaches your audience, people can target them specifically and be much more effective. (Anon., 2021)

Ability to tell stories

People today are not satisfied with standard promotion-driven advertising. To afford you a share of their time, they demand that you engage them, entertain or tell them a good story in return for their attention. Radio offers a great medium through which to do so. Humour and stories are often sought by listeners as a source of distraction from their day, while the ability to inject a unique tone of voice and ambiance through music is key.
(Anon., 2021)

Advantages and Disadvantages of Radio Advertising

As with any advertising medium, one can expect advantages and disadvantages. People have listed some of the important ones to consider when it comes to radio advertising. Let's take a look below. (Anon., 2021)

Tracking ability

Radio advertising has a tracking ability which allows people to see if the ad is being effective on a daily and weekly basis. The great thing here is that people can easily move your radio ad to a different radio slot if the results are not satisfied within the period that you have set. (Anon., 2021)

Limited spots

Everyone wants to get their ad aired during peak times, it can get difficult to secure a spot in these slots. It is vital to work with an agency that has relationships in the radio industry and will be able to negotiate to get people onto the prime spots. (Anon., 2021)

Low production cost

No hair and make-up cost, no lights, camera, action costs on elaborate sets and all the other costs that go into creating a television commercial. (Anon., 2021)

Targeted reach

Knowing which radio station target audience listens to will allow people to get message to them effectively and frequently. Linking radio ad to a competition, this way people can get great listener engagement. Listeners can call-in to participate in the competition and as a result, remember specific ad. (Anon., 2021)

Lack of visual appeal

Radio makes use of just one sense (hearing), meaning that ad has to be so effective that it stirs up the imagination of the listeners and evokes emotions. (Anon., 2021)

Reach audience anywhere

Radio is the only mass medium that people use while driving, cleaning the house or out in the garden. TV advertising requires people to sit in front of their TV, print ads and online media requires focused attention on the page or screen. But people can listen to the radio while doing other things. (Anon., 2021)

How to Advertise on the Radio

It is vital to make sure that choose the right type of radio ad to capture your target audiences' attention. At Empire, have experienced professionals who are able to advise the best radio ad type for objective. Here is a look at the different types of radio advertisements available in the industry. (Anon., 2021)

How to buy Radio Advertising

By understanding the various types of radio adverts, the demographic of radio stations, and consulting a company like Empire, who understands negotiating rates, listenership, reach VS frequency, we are able to assist in reaching your advertising efforts through tailored packages best suited to overall objective.

Here are things to keep in mind when looking at buying radio ads:

- Reach vs Frequency
- Which type of radio ad is cheaper
- Which slots are in high demand, therefore, costing more
- How to negotiate the best rates for spots
- What is the difference between reach and frequency?

- There are two main industry terms that you would need to understand when looking into radio advertising; Reach and Frequency. Let us look a little closer at what these mean and the differences between reach and frequency.

Radio Advertising Reach

Reach- the number of different people who hear a radio commercial. To build reach with a radio campaign, it's a good idea to advertise consistently over a long period of time. Do it several times per day at peak listening hours, targeting Breakfast and Afternoon Drive shows, but these slots will be costly. Alternatively, can maximize reach by advertising on several radio stations be careful not to dilute frequency.The stations choose all have coverage areas with specific data on demographics, and according to recent Nielsen research, radio actually has the most reach among American media consumers. 93% of adults listen to the radio each week, compared to 87% who watch TV. The wide variety of radio formats is a dream for advertisers because radio is so targetable. (Anon., 2021)

Radio Advertising Frequency

Frequency refers to the number of times ad is heard by the average person over the course of a week. If talking strictly frequency and the best number for it to be for us to achieve maximum effectiveness, what is the magical frequency number? There's a scientific algorithm to determine what is best and it's about 3.4 impressions per person per week, rounded down to 3. Best way to achieve this is by using a 21/52 schedule i.e. 21 ads/week translates to 52 weeks/year. The exact number of ads per week will vary depending on the station you're buying into and more bandwidth stations offer more frequency based on your media buying strategy. Pro Tip for media buying to capitalize on frequency, should run more ads per week, on a single radio station and note the time of day. It will have a positive effect on your frequency. (Anon., 2021)

Radio Advertising Scheduling

Based on your advertising objectives, you will need to decide on a schedule, which encompasses the number of ads and the length of the campaign. There are various types of schedules, let's take a look at a few:

Run of station

These are often referred to as ROS and this type of schedule means that specific ad can run any day and time of any available slot. The radio station decides which parts of the day and which programs ad will

be featured on, which can be seen as an advantage because often might get better rates in ad buy. ROS schedule is commonly used by businesses such as car dealerships (Anon., 2021)

Flights

Also known as Branding Schedule, this is a 4-8 week long duration where ad is aired in the same spot, and then switched to a different spot for another 4-8 hours, and so on. The duration of a flight is dependent on specific ad budget, the station are on and the strength of message. (Anon., 2021)

Once all research and requirement gathering done as a audio spec list started own work like this under project plan task

6.2.2.4.3 Production for hope for tomorrow donation campaign audio commercial.

6.2.2.4.3.1. Executive Summary:

In terms of the 'Hope for Tomorrow' Donation Campaign under the Little Hearts Foundation, the Audio Specialist holds a pivotal role in crafting a powerful radio commercial. This overview delineates the comprehensive plan, covering research, script development, recording, and post-production tasks, all aimed at delivering a compelling audio advertisement.

6.2.2.4.3.2. Project Overview:

The audio commercial for the 'Hope for Tomorrow' campaign aims to shed light on child deprivation in Sri Lanka, promoting awareness and urging support. Understanding the diverse audience is key to crafting a message that resonates with compassion and effectively communicates the urgency of addressing this critical issue.

6.2.2.4.3.3. Research and Understanding:

1. Target Audience Analysis:
    - Conduct research to understand the demographics, interests, and concerns of the target audience.
    - Identify key messaging points aligned with the values of individuals and organizations.
2. Child Deprivation Knowledge:
    - Gain a deep understanding of the challenges faced by children in Sri Lanka.
    - Collaborate with project stakeholders and experts to ensure accurate representation in the commercial.

6.2.2.4.3.4. Role and Responsibilities:

The Audio Specialist's roles and responsibilities include:
Script Writing:

- Develop a moving script that highlights the urgency of supporting children in need.
- Collaborate with the creative team to ensure alignment with the overall campaign message.

2. Practicing and Rehearsing:
   - Practice and rehearse the script for a natural and emotionally engaging delivery.
   - Seek feedback from the team to refine tone and pacing.
3. Adding Background Noise:
   - Research and integrate appropriate background sounds to enhance the authenticity of the commercial.
   - Use ambient sounds that evoke the environment of children facing deprivation.
4. Recording:
   - Operate audio recording equipment to capture high-quality sound.
   - Set up microphones for different scenarios to ensure optimal audio capture.
5. Noise Cancelling and Editing:
   - Remove background noise and imperfections from audio files.
   - Edit and mix recordings to achieve optimal sound quality.
6. Sound Design and Implementation:
   - Create and implement sound effects to enhance the emotional impact of the audio content.
   - Design audio elements to evoke empathy and support for the cause.
7. Voiceover Recording and Direction:
   - Record and edit voiceovers for the commercial, directing talent for the desired delivery.
8. Post-Production Tasks:
   - Handle post-production tasks, ensuring seamless synchronization between audio and visual elements.
   - Address Foley work and ADR for enhanced quality.
9. Music Composition:
   - Compose, arrange, and produce music tracks that resonate with the campaign's mood and theme.
   - Select or create music that complements the emotional resonance of the content.

10. Mix and Mastering:
    - Master the final audio mixes for consistency and optimal playback.
    - Balance levels, equalize frequencies, and apply compression as needed.
11. Audio Restoration:
    - Restore and enhance audio quality for impactful delivery.
    - Address any imperfections in audio files.

6.2.2.4.3.5. Equipment Operation and Maintenance:

• Maintain and examine audio recording and editing equipment.

• Ensure the proper functioning of microphones, audio interfaces, and other hardware.

6.2.2.4.3.6. Conclusion:

This work plan details the process undertaken by the Audio Specialist to produce a radio commercial for the 'Hope for Tomorrow' campaign. The combination of research, scriptwriting, recording, and post-production tasks ensures the creation of a high-impact audio advertisement that effectively communicates the urgency of supporting children facing deprivation in Sri Lanka

6.2.2.4.4 Scripts

Just close your eyes for a moment and imagine a child facing a world of uncertainty, dreams buried beneath the weight of economic adversity. Their daily battles are painted with the hues of struggle, a canvas of resilience that seeks your understanding. Your donation is more than just money; it's a lifeline, a whisper of hope that breaks through the silence of their struggles. It's the promise of a better tomorrow. Picture the impact: a child's eyes reflecting gratitude, a spark of hope in the midst of despair. Your generosity has the power to bring light into their world and let them know that someone cares. Little hearts foundation believes in the strength of collective compassion. Together, we can rewrite the stories of these children, offering them a chance to step out of the shadows and into a brighter future. Let's create a world where compassion knows no boundaries.

Script 2

The simplest joys a warm meal, a safe space to rest, the opportunity to learn are distant dreams for many. 'Hope for Tomorrow' aspires to turn these dreams into reality, and it needs your compassion and your willingness to acknowledge their pain. Join Little hearts foundation in becoming the bridge between despair and hope. Your generosity is not just a gift; it's a profound impact on lives yearning for a touch of kindness. Let's create a world where compassion knows no boundaries.

Script 3

Children dream of brighter tomorrows, but a crisis unfolds. Numerous children have lost access to basic necessities due to financial difficulties. 'Hope for Tomorrow' is a lifeline. Join us in this transformative journey. Be the hero they deserve. Visit our website, share the stories, and rewrite their future. Little buds Foundation – every child deserves a chance. Donate today, be a part of something bigger. Join us, make a lasting impact. We're here to help and make a difference.

6.2.2.5 Video Specialist role

Under video specialist job role below task and duties under Hope for tomorrow “project assigned by Project manager.

- Research about Job Role
- Research about audio commercial
- Project kickoff meeting with PM and team
- Planning and research
- Photoshoot and video shoot
- Pre visualization
- Review session
- Fixing
- Asserts gathering

- Creating Video
- Final Review
- Launch

Under this firstly done deep research about video specialist role's duties, responsibilities and overall project idea by IdeaHub team's video specialist

6.2.2.5.1 Research about Video specialist job role and duties

Video producers, or video production specialists, manage the production of videos by planning shoots, organizing schedules, hiring talent, and setting budgets. The video producer is in charge of all tasks associated with video production and ensures that video projects are up to standard and completed on time and within the production budget.
(ROSS, 2021)

The role of a video specialist

A video producer coordinates and manages many aspects of a video production process from start to finish. In a nutshell, a producer may help with creative direction, setting a budget, writing scripts, organizing logistics, managing deadlines, and communicating with the team each step of the way.
(Heil, 2023)

Skills

- Fierce attention to technical detail
- Patience to work through big-picture changes
- A knack for storytelling and a creative eye
- Ability to identify inspiring stories that resonate with audiences
- Strong organizational skills in managing hard and fast deadlines
- Excellent communication skills

A producer's role in video production process.

Throughout the entire video production process, a video producer is in constant communication with their team, the client, and various other members of a video shoot. Working to help creatively execute something as unique and subjective as a video project requires a lot of trust, communication, and expectation setting. (Heil, 2023)

Producer in Pre-Production: Vision and Strategy

At the beginning of a video project, a producer will help to coordinate its creative vision and strategy. By developing a strategy that fits within a client's overall goals and objectives, videos are more likely

to be successful, no matter how success is defined. So it's always important that the producer asks the client upfront: "What are we hoping to accomplish with this video?" With that question in mind, producers work with the client to identify key messages for the piece (a good rule of thumb is to have three key messages), because it's the video producer's responsibility to make sure those messages are seen and heard, loud and clear, in the final video. (Heil, 2023)

Essentially, the pre-production process allows the client to share their "wish list" for the video, while the video producer serves as the creative thought-leader and problem-solver in making it happen. This planning phase also serves as an opportunity for the client and producer to identify potential speakers for the video (whether it be team members, thought leaders within the organization, or hired talent), and to discuss some must-have visuals for the piece. From there, the producer sets that plan into motion. (Heil, 2023)

Producer in Production: Logistics and Management

Once a video project kicks off, a video producer will own all of the logistics and management leading up to production and filming. They'll assemble the appropriate-sized production crew, talent, and needed equipment, as well as manage general scheduling logistics. On the day of filming, they serve as the director and field producer on set, ensuring everything runs smoothly and on time, while also taking the lead on creative direction and quality control to ensure the crew is capturing everything that was discussed in pre-production. (Heil, 2023)

Producer in Post-Production: Bringing the Vision to Life

After filming is complete, a video producer works very closely with the editor to develop a storyline that encompasses those key messages. Producers then continue to manage the post-production timeline – tracking budget, critiquing creative execution of the editing process, and ensuring all deadlines are met. Ultimately, producers lead the process of bringing the vision of the video to life. (Heil, 2023)

The following questions are essential for the success of any video project and an experienced video producer should ask these questions during that pre-production process. These questions will help uncover the purpose and vision and help guide the final product of your video.

1. What are you trying to say in the video?

What is the one thing you want people to remember after they've watched your video? What should stick? Most people can't remember more than three messages. Your challenge is to think of just one that

you want people to remember. Every story component will be based upon that one primary message. (Heil, 2023)

2. Who is your audience?

For years, we've produced year-end fundraising event videos for Twin Cities non-profit organizations. Can you guess what objective those videos have? That’s right, to inspire people to donate.

Most people who attend fundraisers know that they'll be asked for donations, but they’re much more likely to donate if they’re feeling emotionally compelled after watching a story that demonstrates the impact of giving. This goes for all videos, even outside of the fundraising space. You want your video to resonate with your intended audience. An effective producer will ask you to identify in detail who your audience is and what they care about? This can be pivotal to the success or failure of your video. (Heil, 2023)

3. So Now What? What Happens Next?

A good video producer should ask you, in so many words, “So now what?" You've produced this beautiful, compelling video, so now what? You've shown it to an audience of 500 people, so now what? What is the outcome you're trying to generate with this piece? What happens next?

It's important to know what the call to action will be from your video. Do you want people to explore your site more, to reach out and contact you, or to donate money? Each one of these desired outcomes requires a different type of video to be successful. Be sure to consider your "so now what" before you start your video project. (Heil, 2023)

.

4. Where will it be viewed?

We recently had a prospective video client tell us they want an overview video for their company that can be used online, in meetings, at trade shows, and in emails. That's a pretty good list, but the video may be presented differently for each audience. It's important that a producer knows all the places you plan to show your video because what works online may not work in a meeting presentation or at a trade show. (Heil, 2023)

5. How will this video help you generate revenue?

Outside of the nonprofit world, business-to-business organizations are using video as a communications or sales tool.

When we had an initial planning call with a prospective client, the conversation went something like this:

Producer: "Why do you want this video?"

Client: "We want people to watch it and better understand who we are."

Producer: "Why is that important?"

Client: "We think if people know us better, they'll be more likely to buy our products."

Producer: "How will you know?"

(Heil, 2023)

As producers, we become indispensable to our clients when we can help them connect the dots and lead them to outcomes that impact the bottom line. Understand that video is a valuable sales tool, but it's valuable only when it's produced and positioned in a way that will drive actual and measurable results. (Heil, 2023)

6. Ask 'Why,' a lot

A good producer will work hard to uncover the “why” of your video project. In fact, it’s important that they ask “why” at least five times. In any business endeavor, we shouldn’t be afraid to see out the “why”, because there's likely a big payoff if you keep digging. (Heil, 2023)

An experienced producer won’t hesitate to push their client to really think about the purpose of their video. They won’t shy away from continuing to ask “why” again and again. A top producer is curious, questioning and not afraid of coming across as uniformed. Their job is to ask questions, learn about you, and become an expert in your business so they will be able to shepherd your story from start to finish. (Heil, 2023)

Video producers are an essential part of any video production. They help manage all of the details in the process to make sure that everything goes smoothly so that you walk away with a finished product that exceeds your expectations. (Heil, 2023)

Once all research, requirement gathering and project kickoff meeting done with team according to the project plan photoshoot and Video shoot started by IdeaHub solution team’s video specialist. Because for all the productions photoshoot will be useful .

6.2.2.5.2 Video Production

Once all completed from research and planning video production started by video specialist according to the project plan.

The video specialist is a pivotal team member responsible for creating a compelling video commercial for a sustainable agriculture project. This report details the comprehensive work plan, encompassing research, photoshoot, video shoot, and post-production tasks to ensure the delivery of a high-quality video advertisement.

6.2.2.5.2.1.Creation VFX video

According to the given task first video specialist done a script according to creation
Then develop that concept .
Asserts and objects design by Video specialist according to the planed requirement.
Once done it stated text animation and complain with objects for every scenes by video specialist.
Then i text animation
Then finally add colour s and the music according to the plan

6.2.2.5.6 2D and motion Graphic Designer

6.2.2.5.6.1. Job role and responsibilities

Motion Graphics Designers, sometimes just called motion designers, create artwork for the web, television, or film. They use visual effects, animation and other cinematic techniques to bring life to their creations. Today's Motion Graphics Designer creates live video content, graphics, and animation for handheld electronic devices, web programs, video games, and for smartphones and mobile platforms, including apps.

A motion graphics designer works with animation, audio, and visual effects to create moving content and graphics for various media, such as television, the internet, and film. Motion graphic designers work with creative teams to incorporate design elements into a project.
According to the US Bureau of Labor Statistics (BLS), a career in motion graphics design, also called motion design, typically requires a bachelor's degree in computer graphics, art, or a related field and a portfolio of your work.
Motion graphic designers most often use Adobe software programs. Photoshop and Illustrator are two of the more common programs used in the creative process, and Cinema4D is a 3D modeling software program that's more advanced.

Job description of a motion graphics designer
As a motion graphics designer, your role will be to create graphics and two-dimensional and three-dimensional animation from conceptualization to the final product.
Other job duties include:

- Working with various design programs such as Photoshop, InDesign, and Illustrator.
- Working in a creative team
- Creating motion designs for social media platforms such as Meta and Instagram
- Meeting with clients to address their needs
- Selecting audio, visuals, typography, and other design elements

Job duties may also include onboarding new members added to your team and overseeing day-to-day operations.

Skills of a motion graphics designer

A career in motion graphics requires an understanding of design principles such as layout, typography, and color theory. You'll need to be a creative thinker and know the principles of motion graphics and animation.

It's essential to master design programs such as Photoshop, Illustrator, InDesign, and After Effects. While technical skills are necessary, it helps to have traditional art skills to brainstorm ideas on paper.

Good communication skills are essential not only for talking to clients, coworkers, and employers but you'll want for discussing your designs in a manner that the general public can understand.

Possible work environments for motion graphics designers

As a motion graphics designer, you can choose to be self-employed or work for a company. As do technical and scientific agencies, advertising and public relations agencies hire motion graphics designers. The motion picture and video industries offer job opportunities, and software publishers and computer-related industries need motion graphic designers.

Positions are typically available in the entertainment and non-entertainment fields, and more than half of motion graphics designers are self-employed

Motion graphics vs. animation: What's the difference?

Motion graphics is a type of animation, but there's usually no storytelling or narrative. It uses self-contained animation to convey information or emotion. Motion graphics are used for a movie's opening title, kinetic typography, onboarding animation, and social media GIFs.

Conversely, animation is a broad field that many types of moving design fall under, such as stop motion, cartoons, and claymation. It's comprised of cinematic effects and storytelling techniques. Animation generally involves a talking and moving character or characters that tell a story.

What does a Motion Graphics Designer do, typically?

Use artistic and creative skill set to create

Most Motion Graphics Designers have an interest or background in art, and/or graphic design. In fact, most Motion Graphic Designers typically have a strong sketch and/or creative/graphic design skill sets, and while pursuing or exploring those opportunities, learn about and add Motion Graphics Design to their list of skills and abilities.

These designers must be skilled at hearing about an idea or concept and then creating a sketch to flesh out that idea or concept. They can often create several versions of a sketch or animation, and edit it

frequently before completing the final version. Motion Graphic Designers should be skilled at using constructive feedback to make adjustments as needed by the company or client.

Use a strong background in Animation

The definition of animation is "the state of being full of life or vigor; liveliness." And that's what Motion Graphics Designer do – they bring static images to life, through the motion graphics they create, using 2D and 3D animation. As pointed out by Computerhope, "animation is the illusion of movement created by showing a series of still pictures in rapid succession."

The animation uses still images to generate the illusion of movement. A person who creates animations is called an animator. Motion Graphics Designers then take those animation skills and use 2D and 3D animation to create the motion design that is needed pending on the project being worked on or the client/company needs.

Work closely with creative teams and clients

Motion Graphic Designers are key components of every stage in the creative process, from conceptualization to storyboard, and editing, especially in the movie and TV industry, but also for the web, video, and mobile needs. In addition to strong creative skills, Motion Graphic Designers should have strong interpersonal skills, be able to work as an individual, and part of a team, and meet what are often tight deadlines. They should also know that project needs can change at any moment, and be able to make change and edits, even some that override their creative thought process.

Motion Graphics Designer versus Graphic Designer

Motion Graphics Designers and Graphic Designers are both highly creative, and artistic. Graphic designers create graphics, art, and visual stories for a wide variety of mediums, including print, web, and mobile. Motion graphic design is a subset of graphic design that uses graphic design skills and principles through the use of animation.

That's where the two get separated. Graphic designers may have outstanding creative skills, but may not work on animation, or use 2D/3D animation elements. A motion designer must be able to use 2D animation as part of their job to succeed as a Motion Graphics Designer, whereas a good graphic designer may never work in or with animation.

Main Responsibilities of a Motion Graphics Designer

Your main responsibilities will include:

- Creating visually stunning motion graphics and animations for various digital media platforms
- Utilizing video software, such as Adobe After Effects, Adobe Premiere Pro, and Cinema 4D, to design and execute captivating motion graphic projects
- Incorporating typography, visual effects, and sound design to enhance the overall impact and engagement of motion graphic content
- Adapting and optimizing motion graphics for different screen sizes and resolutions to ensure seamless playback on various devices
- Demonstrating a keen eye for aesthetics and attention to detail, ensuring high-quality motion graphic deliverables that meet client requirements and exceed expectations
- Contributing to the creative process by bringing innovative ideas and creative solutions to the table, contributing to the overall success of the design team
- Managing multiple projects simultaneously, adhering to project timelines, and delivering projects on time and within budget
- Collaborating with clients and stakeholders to understand project goals, gather feedback, and incorporate revisions to achieve the desired creative vision
- Collaborating with the creative team, including graphic designers, video editors, and content creators, to conceptualize and storyboard motion graphic projects that align with brand guidelines and project objectives
- Staying updated with industry trends and best practices, continuously refining skills, and exploring new techniques to push the boundaries of motion graphics design.

Key Requirements

- You have a degree/diploma in Design, Fine Arts, or a related field
- You have prior experience as a Motion Graphics Designer as well as a strong portfolio of sample projects
- You possess strong knowledge of Adobe After Effects and Adobe Premiere Pro or similar tools
- You have a keen eye for design and aesthetics
- You are organized and can prioritize effectively
- You have excellent communication skills and can clearly articulate your ideas
- You are a strong team player who can collaborate effectively with different stakeholders

6.2.2.5.6.2 Working Process

The project commenced with the creation of a comprehensive storyboard and rough sketches using Procreate, establishing the foundation for the subsequent animation. The proposed concept, inclusive of main frames, was presented and discussed with the project manager for approval.

Utilizing Procreate on an iPad Air 5, all characters and backgrounds were meticulously crafted with a focus on high-resolution quality. The layer-by-layer approach in the digital illustrations facilitated a seamless transition into the animation phase.

Upon completion of the digital drawings, the artworks were transferred to a MacBook Pro M2 Pro, where Adobe Photoshop 2024 was employed to organize and arrange the components. The decision to utilize Photoshop files (PSD files) streamlined the integration of these artworks into Adobe After Effects 2024, providing flexibility for adjustments.

In Adobe After Effects 2024, the animation process unfolded, employing a combination of cameras, keyframes, and expressions, including loops, to bring the 2.5D motion graphics to life. The utilization of After Effects not only ensured a dynamic visual narrative but also allowed for precise control over each element of the animation.

The next phase involved incorporating the animated sequence into Adobe Premiere Pro 2024, where background music was seamlessly added. This step also involved the amalgamation of video segments and audio components, resulting in a cohesive final video product.

To produce the end product, Adobe Media Encoder 2024 was enlisted to execute the rendering process. The meticulously crafted animation was then presented to the group members for review and feedback, allowing for collaborative refinement.

This multi-faceted approach, combining Procreate, Adobe Photoshop, Illustrator, After Effects, Premiere Pro, and Media Encoder, facilitated a seamless workflow from initial concept to the production of a polished 2.5D motion graphic video.

Softwares :

Adobe Photoshop 2024

Adobe Illustrator 2024

6.2.3 Post Production (Launch)

Brand is currently being tested by PM and the team, and user input is being gathered. Surveys, quizzes, and other forms of user feedback can be developed by graphic designers to learn more about the opinions of customers regarding the brand. At this point, prospective audience are shown the brand by given promotional materials. Marketing materials including flyers, product brochures, social media postings, video commercials, audio commercials website and other visual elements can be made with graphic design can relesed to the analyzed market this stage. These tools will be utilized to raise brand awareness and market the product.

Taking everything into account, graphic designer and other team members may be quite helpful in the creation of new brand by helping to visualize and communicate ideas, creating precise product drawings, and creating marketing materials that are appealing to potential customers. By successfully launched all product to the market by team project end by project Manager.

6.2.3.1. Launched multimedia solutions.

6.2.3.1.1 Working website.
6.2.3.1.2 UI designs for kiosk
6.2.3.1.3 Video advertisements
6.2.3.1.4. Audio commercials
6.2.3.1.5. Animation Video
6.2.3.1.6. Social media post for campaign/Posters/ billboards

7.Discussion

The "Hope for Tomorrow" campaign aspires to be a catalyst for positive change, directly addressing the urgent needs of vulnerable children in Sri Lanka. Through a strategic blend of multimedia platforms and a partnership with the Little Bud Foundation, the campaign aims to inspire collective action, raise awareness, and generate resources for those facing unprecedented challenges. The success of the project hinges on meticulous planning, thorough research, and effective execution to communicate the urgency of supporting Sri Lanka's children amidst economic hardship.
